

# Module Handbook Chemical and Process Engineering Master 2016 (Master of Science (M.Sc.))

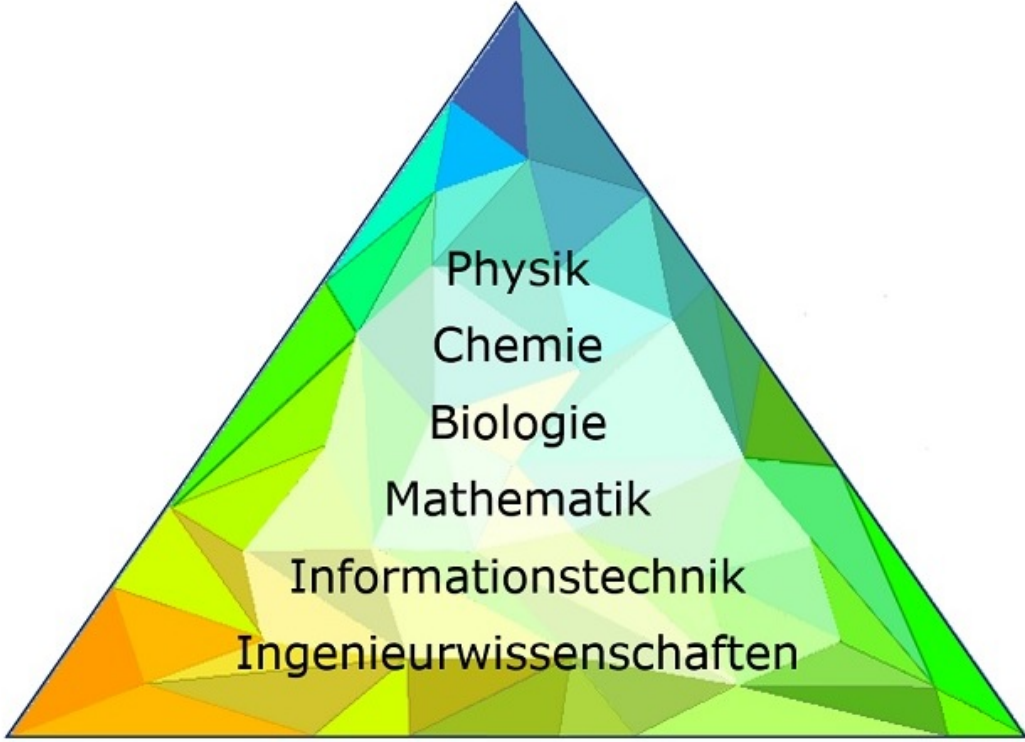

SPO 2016

Summer term 2020

Date: 21/04/2020

KIT DEPARTMENT OF CHEMICAL AND PROCESS ENGINEERING

**Materialprozess-  
Verfahrenstechnik**

Physik  
Chemie  
Biologie  
Mathematik  
Informationstechnik  
Ingenieurwissenschaften

**Energie-  
und Umweltverfahrenstechnik**

**Bio- und  
Lebensmittelverfahrenstechnik**

## Table Of Contents

|  |           |
|--|-----------|
| <b>1. Field of study structure</b> .....   | <b>8</b>  |
| 1.1. Master Thesis .....   | 8         |
| 1.2. Advanced Fundamentals .....   | 8         |
| 1.3. Technical Supplement Course .....   | 9         |
| 1.4. Specialized Course I .....  | 12        |
| 1.4.1. Applied Rheology .....  | 12        |
| 1.4.2. Gas Particle Systems .....  | 12        |
| 1.4.3. Mechanical Process Engineering .....  | 13        |
| 1.4.4. Environmental Process Engineering .....   | 13        |
| 1.4.5. Thermal Process Engineering .....   | 14        |
| 1.4.6. Product Design .....  | 14        |
| 1.4.7. Chemical Process Engineering .....  | 14        |
| 1.4.8. Fuel Technology .....   | 15        |
| 1.4.9. Technical Thermodynamics .....  | 15        |
| 1.4.10. Food Process Engineering .....   | 15        |
| 1.4.11. Water Technology .....   | 16        |
| 1.4.12. Combustion Technology .....  | 16        |
| 1.4.13. Technical Biology .....  | 17        |
| 1.4.14. Energy Process Engineering .....   | 17        |
| 1.4.15. Biopharmaceutical Process Engineering .....  | 17        |
| 1.4.16. Bioresource Engineering .....  | 18        |
| 1.4.17. Energy and Combustion Technology .....   | 18        |
| 1.5. Internship .....  | 19        |
| <b>2. Modules</b> .....  | <b>20</b> |
| 2.1. Additive Manufacturing for Process Engineering - M-CIWVT-105407 .....                         | 20        |
| 2.2. Applied Combustion Technology - M-CIWVT-104299 .....  | 21        |
| 2.3. Applied Combustion Technology - M-CIWVT-105201 .....  | 22        |
| 2.4. Applied Molecular Thermodynamics - M-CIWVT-104361 .....                                       | 23        |
| 2.5. Biobased Plastics - M-CIWVT-104570 .....  | 24        |
| 2.6. Bioelectrochemistry and Biosensors - M-CIWVT-104268 .....                                     | 25        |
| 2.7. Biofilm Systems - M-CIWVT-103441 .....  | 26        |
| 2.8. Biomass Based Energy Carriers - M-CIWVT-104288 .....  | 27        |
| 2.9. BioMEMS - Microsystems Technologies for Life Sciences and Medicine I - M-MACH-100489 .....    | 28        |
| 2.10. BioMEMS - Microsystems Technologies for Life Sciences and Medicine II - M-MACH-100490 .....  | 29        |
| 2.11. BioMEMS - Microsystems Technologies for Life Sciences and Medicine III - M-MACH-100491 ..... | 30        |
| 2.12. Biomimetic Interfaces and Bioconjugation - M-CIWVT-104272 .....                              | 31        |
| 2.13. Biopharmaceutical Purification Processes - M-CIWVT-103065 .....                              | 32        |
| 2.14. Bioprocess Development - M-CIWVT-104347 .....  | 33        |
| 2.15. Biotechnological Production - M-CIWVT-104384 .....   | 34        |
| 2.16. Biotechnological Use of Renewable Resources - M-CIWVT-105295 .....                           | 35        |
| 2.17. Biotechnology in Bioeconomy - M-CIWVT-104399 .....   | 36        |
| 2.18. Catalytic Micro Reactors - M-CIWVT-104451 .....  | 37        |
| 2.19. Catalytic Micro Reactors (including practical course) - M-CIWVT-104491 .....                 | 38        |
| 2.20. Catalytic Processes in Gas Technologies - M-CIWVT-104287 .....                               | 39        |
| 2.21. Chemical Process Engineering II - M-CIWVT-104281 .....                                       | 40        |
| 2.22. Chem-Plant - M-CIWVT-104461 .....  | 41        |
| 2.23. Combustion and Environment - M-CIWVT-104295 .....  | 42        |
| 2.24. Combustion Technology - M-CIWVT-103069 .....   | 43        |
| 2.25. Commercial Biotechnology - M-CIWVT-104273 .....  | 44        |
| 2.26. Computational Fluid Dynamics - M-CIWVT-103072 .....  | 45        |
| 2.27. Continuum Mechanics and Fluid Mechanics of Non Newtonian Fluids - M-CIWVT-104328 .....       | 46        |
| 2.28. Cryogenic Engineering - M-CIWVT-104356 .....   | 47        |
| 2.29. Data Analysis and Statistics - M-CIWVT-104345 .....  | 48        |
| 2.30. Design of a Jet Engine Combustion Chamber - M-CIWVT-105206 .....                             | 49        |
| 2.31. Design of Micro Reactors - M-CIWVT-104286 .....  | 50        |
| 2.32. Development of an Innovative Food Product - M-CIWVT-104388 .....                             | 51        |
| 2.33. Digitization in particle technology - M-CIWVT-104973 .....                                   | 52        |

|   |     |
|---|-----|
| 2.34. Dimensional Analysis of Fluid Mechanic Problems - M-CIWVT-104327 .....                            | 53  |
| 2.35. Drying Technology - M-CIWVT-104370 .....  | 54  |
| 2.36. Economic Evaluation of Capital Projects - M-CIWVT-104390 .....                                    | 55  |
| 2.37. Energy and Environment - M-CIWVT-104453 .....   | 56  |
| 2.38. Energy from Biomass - M-CIWVT-105207 .....  | 58  |
| 2.39. Energy Technology - M-CIWVT-104293 .....  | 59  |
| 2.40. Environmental Biotechnology - M-CIWVT-104320 .....  | 60  |
| 2.41. Flow and Combustion Instabilities in Technical Burner Systems - M-CIWVT-104294 .....              | 61  |
| 2.42. Fluid Mechanics of Non Newtonian Fluids - M-CIWVT-104322 .....                                    | 62  |
| 2.43. Fluidized Bed Technology - M-CIWVT-104292 .....   | 63  |
| 2.44. Food Chemistry Basics - M-CHEMBIO-104620 .....  | 64  |
| 2.45. Food Science and Functionality - M-CIWVT-104263 .....   | 65  |
| 2.46. Formulation of (Bio)pharmaceutical Therapeutics - M-CIWVT-104266 .....                            | 66  |
| 2.47. Formulation Processes for Life Sciences - M-CIWVT-104402 .....                                    | 67  |
| 2.48. Fuel Technology - M-CIWVT-104289 .....  | 69  |
| 2.49. Fundamentals of Motoric Exhaust Aftertreatment - M-CIWVT-104338 .....                             | 70  |
| 2.50. Fungal Biotechnology - M-CIWVT-104398 .....   | 71  |
| 2.51. Gas Particle Measurement Technology - M-CIWVT-104337 .....  | 72  |
| 2.52. Gas Particle Separation Processes - M-CIWVT-104340 .....  | 73  |
| 2.53. Heat Exchangers - M-CIWVT-104371 .....  | 74  |
| 2.54. Heat Transfer II - M-CIWVT-103051 .....   | 75  |
| 2.55. Heterogeneous Catalysis II - M-CIWVT-104280 .....   | 76  |
| 2.56. High Temperature Process Engineering - M-CIWVT-105202 .....                                       | 77  |
| 2.57. High Temperature Process Engineering - M-CIWVT-103075 .....                                       | 78  |
| 2.58. Hydrogen and Fuel Cell Technologies - M-CIWVT-104296 .....  | 79  |
| 2.59. Industrial Aspects in Bioprocess Technology - M-CIWVT-105412 .....                                | 81  |
| 2.60. Industrial Biocatalysis - M-CIWVT-104275 .....  | 82  |
| 2.61. Industrial Crystallization - M-CIWVT-104364 .....   | 83  |
| 2.62. Industrial Genetics - M-CIWVT-104274 .....  | 84  |
| 2.63. Innovation Management for Products & Processes in the Chemical Industry - M-CIWVT-104397 .....    | 85  |
| 2.64. Instrumental Analysis - M-CIWVT-104560 .....  | 87  |
| 2.65. Integrated Bioprocesses - M-CIWVT-104386 .....  | 88  |
| 2.66. Internship - M-CIWVT-104527 .....   | 89  |
| 2.67. Kinetics and Catalysis - M-CIWVT-104383 .....   | 90  |
| 2.68. Liquid Transportation Fuels - M-CIWVT-105200 .....  | 91  |
| 2.69. Mass Transfer II - M-CIWVT-104369 .....   | 92  |
| 2.70. Materials for Electrochemical Storage - M-CIWVT-104353 .....                                      | 93  |
| 2.71. Measurement Techniques in Chemical Processing - M-CIWVT-104490 .....                              | 94  |
| 2.72. Measurement Techniques in Chemical Processing (including practical course) - M-CIWVT-104450 ..... | 95  |
| 2.73. Measurement Techniques in the Thermo-Fluid Dynamics - M-CIWVT-104297 .....                        | 96  |
| 2.74. Membrane Technologies in Water Treatment - M-CIWVT-105380 .....                                   | 97  |
| 2.75. Microbiology for Engineers - M-CIWVT-104319 .....   | 98  |
| 2.76. Microfluidics - M-CIWVT-104350 .....  | 99  |
| 2.77. Microfluidics and Case Studies - M-CIWVT-105205 .....   | 100 |
| 2.78. Microrheology and High Frequency Rheology - M-CIWVT-104395 .....                                  | 101 |
| 2.79. Mixing, Stirring, Agglomeration - M-CIWVT-105399 .....  | 102 |
| 2.80. Modern Analysis Techniques for Process Optimization - M-CIWVT-104387 .....                        | 103 |
| 2.81. Module Master Thesis - M-CIWVT-104526 .....   | 104 |
| 2.82. Multiphase Reaction Engineering - M-CIWVT-104277 .....  | 105 |
| 2.83. Nanoparticles – Structure and Function - M-CIWVT-104339 .....                                     | 106 |

#### Competence Certificate

Learning control consists of:

- Practical (ungraded)
- Oral examination with a duration of about 30 minutes

#### Competence Goal

Students are familiar with the concept of a fully digital fabrication chain using and linking together modeling and simulation, computer aided design and 3D printing. They know the most important 3D printing methods suitable for process engineering applications. Moreover, they are able to use standard tools for 3D data generation and they already own hands on practical experience with the use of a metal 3D printer for fabrication of highly precise parts with complex shape.

#### Module grade calculation

Module grade is the grade of the oral examination.

#### Content

The rationale for additive manufacturing and key aspects of this approach are explained. An overview of different methods and materials for 3D printing is given with a focus on the use of 3D printed parts or fully functional devices in chemical and process engineering. Tools for 3D data generation for additive manufacturing are introduced and design rules for selected 3D printing methods are explained. Illustrative examples for 3D printed components and functional devices in process engineering are presented and discussed based on literature and own research. In the practical, students will work together in small groups on a fully digital fabrication of functional parts by selective laser melting of metal powder going through a cycle of 3D data generation, 3D printing, and finishing of the printed parts.

#### Workload

Lectures: 30 h

Practical: 16 h (8 experiments)

Homework: 90 h

Exam Preparation: 44 h

Total: 180 h

**Competence Certificate**

The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

- The students are able to describe and explain the characteristics of the different flames
- The students can apply the combustion characteristics for burner design.
- The students can test burners in order to investigate their operability and analyze the gained results.
- The students are able to evaluate burner operability with regard to the application.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Basic principles of combustion; Fuels; Combustion characteristics; Structure and properties of stationary laminar and turbulent premixed and diffusion flames; Flame stability; Laws of similarity and burner scale-up; Combustion of liquid fuels; Heterogeneous combustion of solid fuels; Examples of industrial burners

| T-CIWVT-106841 | <a href="#">Biofilm Systems</a> | 4 CR | Horn |

**Competence Certificate**

Oral exam, about 20 min

**Competence Goal**

Students can describe the structure and function of biofilms in natural habitats as well as in technical systems. They can explain the major influencing factors and processes for the formation of biofilms. They are familiar with techniques for visualizing biofilm structures as well as with models for simulating biofilm growth. They are able to select appropriate methods for the analysis of biofilms and to evaluate the habitat conditions.

**Module grade calculation**

Grade of the module is the grade of oral examination.

**Prerequisites**

None

**Content**

Microorganisms typically organize in the form of biofilms in technical and natural aquatic systems. However, biofilms are not only accumulated microorganisms at interfaces: They are bound together by a matrix of extracellular polymeric substances (EPS). In this course, the structure and function of biofilms in different natural habitats and technical applications (biofilm reactors, biofilms in natural waters, biofouling in technical systems and biofilms for power generation in microbial fuel cells) are presented and discussed. Biofilm growth and abrasion as well as models for the simulation of these processes are introduced. Furthermore, microscopic techniques for the visualization of biofilm structures are presented.

**Workload**

Attendance time: 30 h

Preparation/follow-up: 30 h

Examination + exam preparation: 60 h

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

The course mediates fundamentals and process engineering aspects of biomass conversion and conditioning processes. The students learn to understand and to evaluate processes for biomass utilization by balancing mass and energy streams. Taking into account regional and global feedstock potentials the students are enabled to choose the most efficient conversion technologies.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Fundamentals on biomass and its production pathways to energy carriers like substitute natural gas (SNG), bio diesel or other fuels.

Production, properties, and characterization of biomass.

Potential and sustainability; energy demand and supply, potentials today and in the future, CO<sub>2</sub> emissions and reduction potential.

Utilization and conversion of biogenic oils and fats.

Biochemical conversion to liquid products like alcohols; fermentation to biogas and its upgrading.

Thermochemical conversion of biomass via pyrolysis and gasification; examples for synthesis processes (FT-, CH<sub>4</sub>-, CH<sub>3</sub>OH-, DME-synthesis).

**Competence Certificate**

The success control consists of two partial services:

- Exam preparation: Seminar lecture of about 10 minutes during the course; Study achievement according to § 4 (3) SPO
- written examination of 120 minutes according to § 4 (2) Nr. 1 SPO

Module grade is the grade of the written exam.

**Competence Goal**

Students are able to apply the knowledge of processes for the biotechnological production of certain substances on issues relating to new production processes. They identify common principles and laws of the various processes. They can independently solve problems in the development of process schematics and can use the knowledge mediated in the lecture.

**Prerequisites**

The Seminar "Biotechnological Production" is a precondition for admittance to the written exam.

The following knowledge is required: biochemistry, genetics, cell biology, microbiology.

**Content**

After giving an overview of the historical development of biotechnology common basic principles of biotechnological production processes are presented. Using recent examples and selected products, processes and methods of industrial or microbial biotechnology, plant cell culture techniques and animal cell culture techniques are presented. Selected examples include e.g. the production of microbial biomass, organic acids, alcohols and ketones, amino acids, vitamins, antibiotics, enzymes, biopolymers, flavorings, natural substances with plant cell cultures, monoclonal antibodies and biopharmaceuticals with animal cell cultures in an industrial scale.

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

This lecture conveys the role of biotechnological processes in a future bioeconomy. Possible raw materials, their preparation and subsequent biotechnological implementation into energy carriers, platform chemicals and special microbial products are presented.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

After an introduction to the basics of a future bioeconomy and the comparison of chemical and biotechnological industrial processes using renewable resources, their preparation for biotechnological use and their implementation into energy sources (methane, ethanol), platform chemicals (lactate, dicarboxylic acids, amino acids) and special microbial products (polysaccharides, biosurfactants, flavoring substances) and coupling products like bioplastics. The examples of sugar production, papermaking and ethanol production explain various biorefinery concepts.

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

The students know the relevant catalytic processes in gas technology. Understanding the interaction between thermodynamic, mass and heat transfer and reaction kinetic on the basis of concrete examples enables them to evaluate reactor concepts and develop new approaches for catalytic processes.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Sources, utilization, demand and characterization of gaseous chemical energy carriers.

Catalytic processes for production, conditioning and utilization of gaseous energy carriers. Synthesis and utilization (e. g. methanation and steam reforming); exothermic vs. endothermic processes.

Catalytic processes for gas cleaning and conditioning.

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Students know the film model and are able to apply it for the calculation of mass transport effects in reacting multiphase systems. They know technical two- and three-phase reactors with their fields of application and their limits. For multiphase reactors with well-defined properties, they are able to design reactor dimensions and to calculate suitable process conditions.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Theory of mass transfer and reaction in multiphase reacting systems (film model); technical reactors for two-phase systems (gas-liquid, liquid-liquid, gas-solid); reactors for three-phase systems.

**Competence Certificate**

Learning Control is an oral examination with a duration of about 20 minutes.

**Competence Goal**

- The students are able to describe and explain why it is import to protect environment.
- The students are able to name the major combustion pollutants and describe the effect on the environment.
- The students understand the physicochemical mechanisms of the formation of different pollutants in the combustion process.
- The students are able to name and describe primary measures to reduce emissions.
- The students understand the limitations of primary measures and are able to name and describe secondary measures to reduce emissions.
- The students understand and can assess differences of emissions from engine and gas turbine combustion.

**Prerequisites**

None

**Content**

- Importance of environmental protection.
- Combustion pollutants and their effects.
- Pollutant formation mechanisms
- Combustion-related measures (primary measures) to reduce emissions.
- Exhaust gas cleaning: secondary measures to reduce emissions.
- Emissions from engine combustion and from combustion in gas turbines.

**Competence Certificate**

Learning Control is an oral examination with a duration of about 20 minutes (section 4 subsection 2 SPO). Grade of the module is the grade of the oral examination.

**Competence Goal**

- The students are able to describe and explain the characteristics of the different flame types.
- The students can quantitatively estimate/calculate major combustion characteristics like flame temperature and flame velocity. They further understand the physicochemical mechanisms affecting flammability limits and quenching distances.
- The students understand and can assess the influence/interaction of turbulence, heat and mass transfer to reacting flows.
- The students understand the flame structure and the hierarchical structure of reaction kinetic mechanisms.
- The students understand and can assess the influence of interaction between different time scales of chemical kinetics and fluid flow in reacting flows.
- The students are able to assess and evaluate burner operability with regard to the application.

**Prerequisites**

None

**Content**

- Introduction and significance of combustion technology
- Thermodynamics of combustion: Mass and energy/enthalpy balances
- Equilibrium composition
- Flame temperature
- Reaction mechanisms in combustion processes
- Laminar flame velocity and thermal flame theory
- Kinetics related combustion characteristics and experimental characterization: laminar flame velocity, flammability limits, ignition temperature, ignition energy, ignition delay time, quenching distance, flash point, octane and cetane number
- Turbulent flame propagation
- Industrial burner types

**Competence Goal**

The students are familiar with statistical parameters and are able to judge. Out of the variety of statistical approaches for data analysis they are able to choose the most promising tool for a given question.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Introduction into statistics and its application in data analysis. Descriptive statistics with typical quantities and parameters like standard deviation, distributions and their applications. The application of these tools leads to statistical tests, which are needed in approximation and regression. Chemometric data treatment and statistic processing of large data sets will be studied on the example of multivariate approaches for revealing correlations.

**Competence Certificate**

Success control is an examination of another kind according to § 4 Abs. 2 Nr. 3 SPO.

The module grade consists of the grade of the oral examination (1/3) and the cooperation / presentation during the project (2/3).

**Competence Goal**

- The students are able to apply the relevant design parameters in order to design a jet engine combustor.
- The students are able to evaluate design modifications due to the performance of a jet engine combustor.
- The students are able to review literature studies and use them for their design aims.
- The students learn to work target oriented following a time schedule.
- The students learn to work in a team and to exchange information between the teams by definition of interfaces.
- The students learn to present clearly and in an acceptable time the work progress and the most important results.

**Prerequisites**

None

**Content**

At the beginning the description and operating mode of a jet engine with emphasis on the combustor is explained in 4 lessons. Afterwards the design of the combustor based on geometrical boundary conditions (engine casing) and the performance conditions will start. The tasks to be solved for the design are the combustor aerodynamic (pressure loss, air split), thermal management (temperature distribution, wall cooling, material), calculation of emissions and the construction of the combustor. In order to solve the tasks the students have to be organized in groups which are responsible for the tasks mentioned. The work progress will be controlled by a time schedule and regular presentations. The complete design will be discussed in a final presentation.

**Competence Certificate**

The examination is an oral examination with a duration of about 25 minutes (section 4, subsection 2, number 2, SPO).

**Competence Goal**

The students are able to apply the methods of process intensification by microstructuring of the reaction zone and are capable of analyzing the advantages and disadvantages while transferring given processes into microreactors. With knowledge of special production processes for micro reactors, students are able to design microstructured systems in terms of heat exchange and to analyze the possibilities of transferring processes from conventional technology into the microreactor with regard to heat transfer performance. They understand also how the mechanisms of mass transport and mixing interact in microstructured flow mixers, and are able to apply this knowledge to the combination of mixing and reaction. They can also analyze possible limitations in the process adaptation and are thus able to design microstructured reactors for homogeneous reactions appropriately. The students understand the significance of the residence time distribution for the conversion and selectivity and are capable of analyzing the interaction of mass transport by diffusion and hydrodynamic residence time in microstructured equipment in given applications.

**Prerequisites**

None

**Content**

Basiswissen zu mikroverfahrenstechnischen Systemen: Herstellung von mikrostrukturierten Systemen und Wechselwirkung mit Prozessen, Intensivierung von Wärmetausch und spezielle Effekte durch Wärmeleitung, Verweilzeitverteilung in Reaktoren und Besonderheiten in mikrostrukturierten Systemen, strukturierte Strömungsmischer (Bauformen und Charakterisierung) und Auslegung von strukturierten Reaktoren hinsichtlich Stoff- und Wärmetransport

**Competence Certificate**

Learning control is an oral examination with a duration of about 30 minutes.

**Competence Goal**

Capability to develop integrated strategies for the digitalization of processes in particle technology. This includes the development of methods but also the application of numerical methods.

**Module grade calculation**

The Module grade is the grade of the oral examination.

**Prerequisites**

None

**Content**

Teaching methods for the systematic development of engineering-scientific digitization strategies for particle technology. This includes the mathematical fundamentals of process simulation and model predictive control as well as basics of online and in-situ process analysis. Furthermore, the metrological acquisition of large amounts of data requires complex evaluation methods for further processing and reduction of the generated data. The basics of multivariate data analysis as well as machine learning are taught. The developments in digitalization in particle technology are supported by various practical examples. In addition to the lecture a practical exercise in the form of a project work takes place.

**Competence Certificate**

The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Students are able to identify and design a drying process. They will have an overview on the state of the art in drying technology science.

They are able to interpret, evaluate and select a proper drying process.

The qualification goal is to learn proper methods and drying technology basics in order to transfer this fundamental knowledge to new processes and apparatus.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Introduction to drying technology and industrial applications; Modeling of heat mass transfer during drying and modeling of the entire drying process ; Determination of material properties, sorption, diffusion; Determination of typical drying curves and regimes

Fundamentals in polymer film drying and drying of porous materials; Basic principles of spray drying, fluidized bed drying, microwave drying, infrared drying and freeze drying.

**Competence Certificate**

Learning Control is an oral examination with a duration of about 40 minutes.

**Competence Goal**

Part "Technical Systems for Thermal Waste Treatment"

The students are enabled to characterize different waste fractions and select suitable technologies for waste to energy conversion based on detailed process understanding and by application of evaluation tool combining economical and ecological aspects. The students gain a profound inside into process operation.

Part "Combustion and Environment" / "Appli"ed CombustionTechnology"

- The students are able to describe and explain why it is import to protect environment.
- The students are able to name the major combustion pollutants and describe the effect on the environment.
- The students understand the physicochemical mechanisms of the formation of different pollutants in the combustion process.
- The students are able to name and describe primary measures to reduce emissions.
- The students understand the limitations of primary measures and are able to name and describe secondary measures to reduce emissions.
- The students understand and can assess differences of emissions from engine and gas turbine combustion.

**Prerequisites**

None

**Content**

## Lecture "Technical Systems for Thermal Waste Treatment"

- Waste: definition, specification, potential;
- Basic thermo-chemical processes for waste treatment: pyrolysis, gasification, combustion
- Technical systems for thermal waste treatment:
  - combustion: Grate furnace, rotary kiln, fluidized bed,
  - gasification: fixed bed, fluidized bed, entrained flow
  - pyrolysis: rotary kiln
- Refractory technology
- Legal aspects of waste management
- Tools for critical evaluation of waste treatment technologies
- Excursion to industrial sites

## Lecture either "Combustion and Environment"

- Importance of environmental protection.
- Combustion pollutants and their effects.
- Pollutant formation mechanisms
- Combustion-related measures (primary measures) to reduce emissions.
- Exhaust gas cleaning: secondary measures to reduce emissions.
- Emissions from engine combustion and from combustion in gas turbines.

or "Applied Combustion Technology"

oder "Applied Combustion Technology"

Basic principles of combustion; Fuels; Combustion characteristics; Structure and properties of stationary laminar and turbulent premixed and diffusion flames; Flame stability; Laws of similarity and burner scale-up; Combustion of liquid fuels; Heterogeneous combustion of solid fuels; Examples of industrial burners.

**Competence Certificate**

The examination is a written examination with a duration of 90 minutes (section 4 subsection 2 number 1 SPO).

The grade of the written examination is the module grade.

**Competence Goal**

The course mediates fundamentals and process engineering aspects of biomass conversion and conditioning processes. The students learn to understand and to evaluate processes for biomass utilization by balancing mass and energy streams. Taking into account regional and global feedstock potentials the students are enabled to choose the most appropriate conversion technologies and applications.

**Prerequisites**

None

**Content**

All relevant technologies involved in biomass conversion processes for bioenergy production are introduced, also evaluating their state of development and application potential. If necessary, basics of chemistry, thermodynamic equilibrium and/or of reaction kinetic calculations are introduced. In particular, the lecture consists of the following topics.

- Potential of biomass for sustainable bioenergy production, energy demand and supply today and in the future, CO<sub>2</sub> emission and its reduction potential
- Production, composition, properties, and characterization of biomass
- Principle production pathways to energy carriers like substitute natural gas (SNG), biodiesel, bioethanol, synthesis gas or other fuels.
- Utilization and conversion of biogenic oils and fats.
- Biochemical conversion to liquid products like alcohols; fermentation to biogas and its upgrading.
- Thermochemical conversion of biomass via combustion, pyrolysis and gasification; synthesis processes for synthetic fuels production (Methane-, Fischer-Tropsch-, Methanol-to-gasoline-, DME-synthesis).
- Biofuels in comparison

By an excursion to the 3-5 MW pilot plant for synthetic fuel production at KIT insight into a technically representative pilot plant is gained.

In the exercises, special and practical aspects of the lecture are investigated in more deepness. The students evaluate mass balances along whole process chains as well as energetic or carbon utilization efficiencies, compare alternative technologies. The results are presented and discussed in the learning group.

**Competence Goal**

Students understand specific needs of liquid and solid formulations for life science application. They are able to select appropriate additives and understand their relevance for product preparation and stabilization. They understand and master basics of formulation preparation and cope with the design of suitable processes. They are acquainted with conventional and innovative technologies. They identify correlations between process parameters and product performance. They are able to transfer process knowledge between different products.

Students are able to identify relevant parameters for product performance. They are able to select suitable scientific based characterization methods and can discuss analytic results critically.

Characteristics of liquid formulations; processing objectives; fundamentals of particle desaggregation and disruption as well as droplet break-up; particle and droplet stabilization in liquid continuous phase; apparatus design and operation principle; process design; process and property function for preparation of liquid formulations; characterisation of liquid formulation properties: fundamentals and measurement devices; innovative developments.

Drying of dispersions: (LV FT3: H.P. Karbstein/LVT):

Objectives of drying, fundamentals of product stabilisation for extended shelf life; processes using the example of spray drying: operation principles, apparatus design, process design, process function; fundamentals of powder quality characterization, instant properties, fundamentals and measurement devices; agglomeration for improved instant properties.

Extrusion Technology: (LV FT4: M. A. Emin/LVT):

Fundamentals of extrusion and extruded product design, extrusion equipment, process design, characterization of the products and process (fundamentals of instrumentation and modeling)

This lecture is prerequisite for practical extrusion course, which is offered as an optional course (i.e. NF or VF LVT).

**Competence Certificate**

The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO).  
The grade of the oral examination is the module grade.

**Competence Goal**

The students are enabled to characterize fuel resources and derived fuels / chemical energy carriers and to critically evaluate the processes for conversion of fuel resources to chemical energy carriers with respect to process technology, economy and ecology

**Prerequisites**

None

**Content**

- Overview of fuel resources: coal, oil, gas, biomass – process of formation, resources, consumption
- Mining technology
- Characterization and analysis of fuel resources and fuels
- Basics and processes for conversion of fuel resources into chemical energy carriers / fuels
- Processes of fuel conversion: power / heat, mobility, synthesis

### Competence Certificate

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

The grade of the oral examination is the module grade.

### Competence Goal

Students develop an understanding for the challenges of engine exhaust aftertreatment on the basis of the taught basics of the composition of engine emissions. They are able to define application-specific solutions for emission reduction and know the main problems in the operating behavior of the respective components (oxidation catalyst, particle filter, SCR catalyst, ammonia slip catalyst). Students learn to classify current issues objectively and to evaluate them independently.

### Prerequisites

None

### Content

- Composition of combustion engine exhaust gases
- Legal framework conditions
- Oxidation catalysts: design, function & layout
- Particle reduction – exhaust aftertreatment with particle filters: design, function & layout of particle filters; soot removal; aging by ash deposits; ash removal
- Nitrogen oxide reduction – exhaust aftertreatment by selective catalytic reduction: basic reactions; possible reducing agents; AdBlue® – specification & decomposition; characterization of applied catalysts
- Combined exhaust aftertreatment systems – design & function
- Safety and vehicle related aspects of exhaust aftertreatment integration into the vehicle

### Workload

- Attendance time (Lecture): 30 h
- Homework: 50 h
- Exam Preparation: 40 h

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Students can independently solve questions concerning gas particle measurement technology by knowledge of the required analysis steps and choice of a particle measurement technology suitable for the task at hand.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Aspects of particle measurement technology; sampling; sample preparation; dispersion; imaging measurement methods; counting methods; separation methods, spectroscopy, gas analysis.

**Workload**

- Attendance time (Lecture): 60 h
- Homework: 90 h
- Exam Preparation: 30 h

| T-CIWVT-108895 | <a href="#">Gas Particle Separation Processes</a> | 6 CR | Meyer |

**Competence Certificate**

The examination is an oral examination with a duration of about 30 minutes (single examination) or 20 minutes (comprehensive examination in VF Gas-Partikel-Systeme) (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Students develop an understanding for the basic physical processes that can be used for the (size dependent) separation of particles from a carrier gas flow, and become acquainted with related types of separation apparatus. They are able to identify the crucial operational and process conditions needed for a preselection of suitable separation devices for a specific separation task. They can describe quantitatively the influence of the main operational and process parameters on separation efficiency and energy consumption of an individual apparatus. The students learn to detect practical problems in the operation of separation devices, and they can identify procedures to overcome these issues.

They are therefore able to independently select the most suitable device and the corresponding operational mode for a specific separation task.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

- Fundamentals:
  - Basic quantitative description of separation processes
  - Elementary theory for classifiers and separators
  - Criteria for selection and evaluation of a separation apparatus
  - Legal framework
- Specific separators for gas particle systems:
  - Functionality, design, fields of application, limitations, practical examples
  - Approximate quantitative calculation of separation efficiency and energy consumption for exemplary classification or separation tasks
  - Types of devices that are described in the lecture:
    - Classifiers in gravity and centrifugal force fields
    - Centrifugal separators (gas cyclone)
    - Filtering separators
    - Wet separators (Scrubbers)
    - Electrical separators (Electrostatic precipitators)

**Workload**

- Attendance time (Lecture): 45 h
- Homework: 75 h
- Exam Preparation: 60 h

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Students know essential calculation methods for the dimensioning and verification of heat exchangers and are able to apply them to engineering problems. Students can independently use design methodologies for heat exchangers and perform the necessary calculations of heat transfer coefficients.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

types of heat exchangers, mean logarithmic temperature, efficiency-NTU-methodology, cell methodology, design of heat exchangers, heat transfer in typical heat exchanger geometries, compact heat exchangers, microchannel heat exchangers

**Workload**

- Attendance time (Lecture): 30 h
- Homework: 50 h
- Exam Preparation: 40 h

**Competence Certificate**

The examination is an oral examination with a duration of 20 minutes (section 4 subsection 2 number 2 SPO).  
 Module grade is the grade of the oral examination.

**Competence Goal**

Students can deduce the basic differential equations of thermofluid dynamics and know possible simplifications. They know different analytical and numerical solution methods for the transient temperature field equation in quiescent media and are able to use them actively. Students are able to apply these solution methods independently to other heat conduction problems such as the heat transfer in fins and needles.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Advanced topics in heat transfer:

Thermo-fluid dynamic transport equations, transient heat conduction; thermal boundary conditions; analytical methods (combination and separation of variables, Laplace transform); numerical methods (finite difference and volume methods); heat transfer in fins and needles

**Workload**

- Attendance time (Lecture): 40 h

**Competence Certificate**

The examination is an oral examination with a duration of 20 minutes (section 4 subsection 2 number 2 SPO).

The grade of the oral examination is the module grade.

**Competence Goal**

Students know the influences of mass and heat transfer resistances on the activity and selectivity of catalysts and on the occurrence of particle/film overheating and multiple operation states. They can develop catalyst designs to avoid transport resistances and high pressure drop. They are capable of selecting reactors and operating conditions for optimum utilization of the catalyst performance.

**Prerequisites**

None

**Content**

Influence of mass and heat transfer on the catalytic performance (activity, selectivity, overheating and multiple states); advanced catalyst formulation and shaping technologies for maximum performance; concepts for catalytic reactors; topical case studies on the development and application of heterogeneous catalysts.

**Workload**

**Competence Certificate**

The examination is an oral examination with a duration of 30 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

The students learn to identify the requirement of high temperature plants. Applying the balance equations for heat and mass and taking into account the relevant chemical kinetic processes they can derive the main process parameters. They are able to select the appropriate reactors and the plant components. Hence the students can evaluate different industrial processes and develop solutions for new problems in the area of high temperature process engineering.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

High temperature (HT) processes and plants; principles and technologies for heat generation; heat generation by combustion; heat transport by radiation; calculation of heat transfer in in high temperature processes; Examples of HT plants

**Competence Certificate**

Learning control is an oral examination with a duration of about 20 minutes, SPO section 4, subsection 2.

**Competence Goal**

- The students are able to identify similarities and differences between different fuel cell systems.
- The students are able to assess different fuel cell systems based on the thermodynamic fundamentals.
- Students can describe chemical and process fundamentals of fuel cell systems and, based on this, name conditions for their use.
- The students are able to name and assess hydrogen production processes.
- The students are able to identify and assess specific problem areas of hydrogen and fuel cell technology.

**Module grade calculation**

The module grade ist the grade of oral examination.

**Prerequisites**

None

**Content**

- Introduction and thermo-dynamic basics
- PEM fuel cells
- Molten carbonate fuel cells (MCFC)
- Solid oxide fuel cells (SOFC)
- Fuel cells for liquid and solid fuels
- Hydrogen as an energy carrier
- Hydrogen production
- Electrolysis

**Competence Goal**

The students are enabled to critically compare and evaluate different processes leading to industrially relevant products (chemo- vs. biocatalysis as well as various biocatalytic procedures among each other).

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Current developments of enzyme-catalyzed production as well as already established procedures:

- Pharma industries (synthesis and modification of drugs)
- Food and feed industries (enzymatic conversion of ingredients, production of flavour enhancers )

In addition to the presentation of enzymatic reactions and their molecular-biological optimization, also aspects of process engineering are discussed such as choice and design of solvents/reaction media, downstream processing, as well as economic and ecologic factors.

| T-CIWVT-108812 | <a href="#">Industrial Genetics</a> | 6 CR | Neumann |

**Competence Goal**

Students will be able to explain and describe the basic methods of genetic engineering mentioned above, such as methods of DNA recombination, sequencing and PCR; manipulation of gene expression in prokaryotes; production of heterologous proteins in prokaryotic and eukaryotic hosts; targeted mutagenesis and protein design; and metabolic engineering. The methods can be applied to similar problems and proposed solutions can be developed.

In the preparation of the seminar presentation, the students show that texts describing such methods can be analyzed and the industrial applicability of these methods can be critically discussed.

**Prerequisites**

None

**Content**

**Lecture:** Fundamentals of genetic engineering with respect to its industrial applicability; methods of DNA recombination, sequencing and PCR; manipulation of gene expression in prokaryotes; production of heterologous proteins in prokaryotic and eukaryotic hosts; targeted mutagenesis and protein design; genetically modified microorganisms in industry; production of pharmaceutically active proteins such as e.g. Insulin or interferon, antibiotic production, molecular diagnostics, production of antibodies, vaccines and therapeutics; metabolic engineering - optimization of substance production by genetic engineering methods.

**Seminar:** 10 min Lecture on a current example from industrial genetic engineering. Topics will be provided.

### Competence Certificate

The examination is a written examination (multiple choice) with a duration of about 30 minutes (section 4 subsection 2 number 1 SPO).

The grade of the written examination is the module grade.

### Competence Goal

The students get to know the structures of the chemical industry.

They receive an insight into the interpretation of business figures and their connection with innovations.

They know how different factors influence innovation strategies.

They get to know the expiry of an innovation process.

The students have the opportunity to utilize the presented methods and tackle problems which are close to industrial application.

Besides the students receive an insight into the work of an innovation management (excursion).

### Prerequisites

None

**Content**

## Background

The chemical industry had to adapt to the economic conditions of globalization during the last decades. It has been aligned to global markets thus changing the formerly scientific-technology oriented R&D. Today the work in industrial product & process development requires skills besides a thorough knowledge about chemistry and technology: a good general economic understanding combined with the competence to manage a complex system based on business figures. This competence allows scientifically and technology educated scientists and engineers to align chemical product and process development within the Innovation Strategy to the strategic business plan. It is implemented within the Innovation Process and monitored and managed by characteristic performance indicators. Thus, the economic benefit of innovation can be quantified using quantitative measures.

## Scope of the lecture

The lecture intends to provide the fundamentals for understanding Innovation Management and to utilize them by tackling examples close to industrial application. The course addresses the following key questions:

What are the structures in the chemical industry?

What are business figures? How are they interpreted and applied in terms of innovation?

What are customers? How do they influence innovation?

How do marketing and product management determine innovation?

What is a business strategy? How is it connected to the innovation strategy?

What is the Innovation Process? How is it managed?

What is Innovation Portfolio Management? Why is it needed for successful innovation?

What are state of the art Innovation Management practices in the chemical industry?

## Visit

The lecture includes a one day visit to the Evonik Site Hanau for experiencing current Innovation Management practices from discussions with managers in the chemical industry.

**Competence Certificate**

The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

The students are familiar with the important methods of modern instrumental analytics and their range of application. They can explain and critically compare the underlying physical principles of the methods. Students are able to develop solution concepts for analytical problems and to choose adequate methods to answer a specific question.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Introduction to selected methods of modern instrumental analysis, as for example optical methods and magnetic resonance methods. Imaging techniques such as MRI,  $\mu$ CT and optical microscopy (CLSM and OCT) and fundamentals of data and image analysis are presented. The focus is on a clear presentation of the physico-chemical fundamentals and the underlying principles as well as the fields of application.

**Competence Goal**

The students are enabled to balance modern processes for the production of liquid fuels and to put them into context of a modern refinery. Actual alternative processes for the production of liquid fuels, their advantages and disadvantages have to be understood.

**Module grade calculation**

Grade of the Module is the grade of oral examination.

**Prerequisites**

None

**Content**

Introduction to Chemical Fuels (resources, global and regional consumption, CO<sub>2</sub> emissions, characterization of raw materials and products, overview of conversion processes; petroleum refining: characterization of crude oils and refinery products, physical separation processes, chemical conversion processes (cracking, hydrotreating, reforming, H<sub>2</sub> production etc); liquid fuels from renewable sources (biomass, renewable electricity); gaseous fuels; gasification of solid fuels; economic aspects and perspectives.

**Competence Certificate**

The examination is an oral examination with a duration about 30 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Students know the basic principles of electrochemical storage devices as well as the electrochemical basics. They are able to calculate the expected properties and operating parameters for given material combinations of electrochemical cells. Students are also able to evaluate appropriate materials and engineering processes for future battery chemistries in a critical way and are able to indicate possible application fields. For different mobile or stationary applications of electrochemical storage devices, students are able to select a suitable type of electrochemical energy storage device and are capable to configure a suitable system configuration.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content****Electrochemical basics**

Introduction to electrochemistry, electrochemical potentials, concentration dependence, electrochemical methods

**Fundamentals of electrochemical storage systems**

Structure and functioning of primary and secondary batteries

Volta battery / Leclanche-element, alkaline, zinc-carbon, lead-acid, zinc-air, nickel-cadmium, nickel-metal hydride, redox flow batteries, high-temperature batteries, lithium ion batteries, new storage systems (e.g. Li-O, Li-S)

Structure and function of Super capacitors, hybrid systems

**Materials and methods for electrochemical storage**

Intercalation and conversion electrodes, polymer and ceramic separators

Electrolyte additives and electrode coatings

Liquid and solid electrolyte systems

Conducting materials (metals, modified plastics), housing materials

**Design of electrochemical storage systems**

Cells and battery development, temperature control, construction and connection technology

Housing and application integration

**Operation and applications of electrochemical storage systems**

Battery management, determination of operating parameters, aging behavior of batteries, battery selection for specific application profiles

### Competence Certificate

Learning Control is an oral examination with a duration of about 20 minutes (section 4 subsection 2 SPO).

### Competence Goal

- The students are able to plan an experiment, select the appropriate quantities to be measured and identify the appropriate dimensionless numbers for the universal representation of the results.
- The students have a thorough understanding of several advanced measuring techniques used for basic research in thermofluids. They are able to select the most appropriate technique for an experimental study.
- The students can assess the accuracy and limitations of measuring techniques quantitatively.
- The students understand the different time scales of involved phenomena and the stochastic nature of experiments, measuring techniques and turbulent flows. They are able to accurately process acquired measurement data in the time and in the spectral domain.

### Module grade calculation

Grade of the module is the grade of the oral examination.

### Prerequisites

**Competence Certificate**

The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Acquisition of capacities for the development of microfluidic systems and their investigation

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Definition of the term „microfluidics“, physics of miniaturization, scales in micro and nanofluidics, introduction to fabrication methods, fluid dynamics of microfluidic systems, basic equations of fluid mechanics, creeping flows, electrohydrodynamics of microsystems, electroosmosis, electrophoresis and DNA sequencing, diffusion, mixing and separation in microsystems, interfacial phenomena and multiphase flows in microsystems, digital microfluidics and microfluidic systems

**Competence Certificate**

Learning control is an oral individual examination with a duration of 30min according SPO section 4, subsection 2.

**Competence Goal**

The students are able to explain the fundamental laws and the derived physical principles of mixing, stirring and the particle agglomeration and not only to relate them to the principally suited processes but also to selected apparatuses. They have the ability to apply the relationship between product, operation and design parameters to different processes. They can analyse the related process engineering problems with scientific methods and give alternative problem solution proposals. On the basis of their skills they can evaluate whether and if applicable a promising process can be designed.

**Module grade calculation**

The module grade ist the grade of oral examination.

**Prerequisites**

None

**Content**

Fundamentals and applications; statistic methods to characterize the mixing quality; characterisation of the flow properties of bulk solids and liquids; introduction into dimension analysis to achieve characteristic numbers important for mixing problems; scale-up procedures for specific mixing processes; solids mixing processes like free-fall, pusher and intensive mixers, fluidised bed, air jet, and turnover mixers; pile mixing techniques; fluid-mixing processes like homogenisation, suspending, emulsifying, gassing and heat transfer; static mixers and kneaders. adhesion forces between particles; agglomerate properties: characterisation of agglomerates regarding size, size distribution, porosity, density, stability, flow behaviour and instantiation behavior; agglomeration processes like roll-agglomeration, mixing agglomeration, fluidized bed and spray agglomeration, agglomeration in liquids by means of coagulation, flocculation or changed wettability, press agglomeration by means of tableting, roller compaction or extrusion and post hardening of agglomerates by means of sintering.

**Competence Certificate**

The examination is an oral examination with a duration of 40 minutes (section 4 subsection 2 number 2 SPO).

The grade of the oral examination is the module grade.

**Competence Goal**

Students know the film model and are able to apply it for the calculation of mass transport effects in reacting multiphase systems. They know technical two- and three-phase reactors with their fields of application and their limits. For multiphase reactors with well-defined properties, they are able to design reactor dimensions and to calculate suitable process conditions.

Students are familiar with the functions of heterogeneous catalysts and are able to apply kinetic models to interpret catalytic effects. They know technical manufacturing techniques and can discuss their impact on catalyst properties. Furthermore, students know important physical-chemical and functional characterization methods, and they are able to use characterization data for a qualified assessment of the applicability and performance of heterogeneous catalysts.

**Prerequisites**

None

**Content**

Theory of mass transfer and reaction in multiphase reacting systems (film model); technical reactors for two-phase systems (gas-liquid, liquid-liquid, gas-solid); reactors for three-phase systems.

Functions and kinetic effects of catalysts; structure, manufacturing and forming/shaping of heterogeneous catalysts; physico-chemical properties (composition, morphological and mechanical properties, specific total and partial surface areas, porosity and pore size distribution, surface chemistry) and their characterization; functional characterization (activity, selectivity).

**Competence Certificate**

The examination is an oral examination with a duration of about 30 minutes in case of a single module examination and 20 minutes in case of a overall examination of the specialized course (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Students develop an understanding of the correlation between structure of nanoscaled systems and their physical properties. Additionally, they understand how process parameters in the synthesis of nanoscaled particle systems determine the resulting particle structure.

Based on the knowledge of the structure-function-relationships and of the synthesis routes, the students can develop strategies for the systematic generation and optimization of nanoparticulate systems for specific applications.

**Module grade calculation**

The module grade ist the grade of oral examination.

**Prerequisites**

None

**Content**

- Technical and historical classification of the lecture content
- Methods for visualization of nanoscaled objects and structures
- Description and physical basis of specific properties of nanoscaled particles ( and other structures / shapes)
  - Size dependency of surface energy
  - Modification of the phase transition temperature (compared to the bulk phase)
  - Mechanical properties
  - Optical properties
  - electrical properties
- Methods for synthesizing nanoscaled particle systems in the gas phase with well-defined properties
- Relevant process parameters for the adjustment of
  - Particle size (primary particle and agglomerate size)
  - Agglomeration state
  - Agglomerate strength
  - Structure / phase of the particle material
  - Chemical structure of particle surface
  - Multi-level structuring (core-shell, nanoparticles on support structures)

**Workload**

- Attendance time (Lecture): 45 h
- Homework: 75 h

**Competence Goal**

Knowledge about NMR and their applications, basic understanding of the phenomena

**Prerequisites**

None

**Content**

An overview of applications of nuclear magnetic resonance (NMR) will be given together with the basic description of this analytical tool. In the focus of the lectures are typical applications of NMR in chemical and bio engineering. The understanding of this versatile analytical method will be developed on the basis of dedicated examples.

**Competence Certificate**

The examination consists of two Parts:

1. written examination with a duration of 60 minutes (section 4 subsection 2 number 1 SPO)
2. practical course, ungraded study achievement (§ 4 Abs. 3 SPO)

**Competence Goal**

V+Ü: Students understand the main basics of quantum mechanics which are necessary for the application of spectroscopic methods. They can understand and apply selected spectroscopic methods for the evaluation, analysis and solution of problems in engineering sciences.

They understand the thermodynamic formalism for the description of interfacial phenomena. They are able to analyze wetting and dewetting problems, nucleation phenomena as well as ad- and desorption within this formalism.

They can understand and analyze electrochemical cells within thermodynamics of heterogeneous systems with charged particles. They understand transport phenomena of charged particles in solutions. They can apply the Debye-Hückel-Theory to thermodynamic and transport phenomena. Using these knowledges they are able to acquire and understand more complex electrochemical systems like batteries, fuel cells and corrosion processes.

P: Within the practical course they work on selected projects. Beginning with preparing working steps, over the experimental procedure, to the evaluation of the received data and the written presentation they deepen their knowledge in the field of selected experimental examples. They are able to interpret the results with respect to scientific significance and accuracy.

**Prerequisites**

None

**Content**

V+Ü: description of fundamentals and application of physico-chemical subjects relevant for chemical engineering sciences:

Basics of quantum mechanics and its application to spectroscopy, FTIR-absorption spectroscopy, UV-VIS spectroscopy, Raman spectroscopy, NMR spectroscopy;

Thermodynamics of interfaces, Gibbs' adsorption isotherm, adsorption at solid surfaces, Langmuir- and BET adsorption, nucleation theory;

Electrochemistry, thermodynamics of heterogeneous systems with charged particles, electrochemical cells, Debye-Hückel theory, ionic migration in an electric field, technical application of electrochemistry;

P: performance of selected experiments in the field of physical chemistry, improvement of theoretical knowledge focusing on selected topics.

**Workload**

Attendance time (V+Ü): 3 SWS; 45 h

**Competence Certificate**

The examination is an oral examination with a duration of 30 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Understanding of the mechanisms of entropy generation, and the interaction of the first and the second law in thermodynamic cycles; understanding of cryogenic material properties; application, analysis and assessment of real gas models for classical helium I; understanding of quantum fluid properties of helium II based on Bose-Einstein condensation, understanding of cooling principles at lowest temperatures.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Relation between energy and temperature, energy transformation on microscopic and on macroscopic scales, physical definitions of entropy and temperature, thermodynamic equilibria, reversibility of thermodynamic cycles, helium as classical and as quantum fluid, low-temperature material properties, cooling methods at temperatures below 1 K.

**Competence Goal**

Students are able to use their academic knowledge on the processing and characterization of food products to evaluate industrially relevant food processes and techniques. In teams, they can discuss and solve complex tasks that concern the production and evaluation of food products and that stem from industrial applications. Students have the skills to present the results of their work in a scientific manner.

**Prerequisites**

None

**Content**

One of the following practical courses can be selected:

Introduction to Sensory Analysis with Practice

Fundamentals of Sensory-Physiological Methods: individual sense, basic tastes, unification and standardization, requirements for panel test, training of panel, methods of sensory analysis: difference testing, triangle test, duo-trio test, descriptive tests, evaluation test with scale, etc.

Seminar of Food Processing in Practice with Excursion

Current challenges in the industrial production of selected food products will be discussed in small groups, and presented to the whole class. The seminar will be accompanied by an excursion to the relevant food processing plants.

**Competence Certificate**

The learning control consists of:

- Laboratory: 6 Experiments including entrance test, protocol; presentation about a selected experiment (about 15 minutes); final test (SPO section 4, subsection 2 No. 3)
- Excursions, protocols about excursions (ungraded)

**Competence Goal**

Students can explain the most important processes in water treatment. They are able to do calculations, and to compare and interpret data. They learn how to use different methods, and to interpret different processes.

**Module grade calculation**

Module grade is the grade of the laboratory and is formed as follows:

A total of 150 points can be achieved:

- maximum 60 points for the experiments (10 each)
- maximum 15 points for the presentation
- maximum 75 points for the final certificate

At least 80 points must be achieved in order to pass.

**Prerequisites**

Module 'Water Technology (PA221)'

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The module **M-CIWVT-103407 - Water Technology** must have been started.

**Content**

6 different experiments out of: equilibrium study of the calcium carbonate system, flocculation, adsorption, oxidation, atomic absorption spectroscopy, ion chromatography, liquid chromatography, sum parameter, and an oral presentation of the student. In addition, excursions to two different treatment plants (waste water, drinking water).

**Workload**

Attendance time: Introduction and presentation (4 h), 6 Experiments (4 h each), 2 excursions: 36 h

Preparation/follow-up, protocols, presentation: 50 h

### Competence Certificate

Learning control is an oral examination with a duration of 20 - 30 Minutes, SPO section 4 subsection 2.

### Competence Goal

The students know the basics of characterization of powders, pastes and suspensions. They have a fundamental understanding of the process technology for shaping of particulate systems. They are able to use these fundamentals to design selected wet- and dry forming processes.

### Module grade calculation

Module grade is the grade of oral examination.

### Prerequisites

None

### Content

The course covers fundamentals of the process technology for shaping of ceramic or metal particle systems. Important shaping methods are reviewed. The focus is on characterization and properties of particulate systems, and, in particular, on process technology for shaping of powders, pastes, and suspensions.

### Recommendation

Knowledge of general material science is required.

**Competence Certificate**

A performance assessment is obligatory and can be oral, a written exam, or of another kind.

**Competence Goal**

Students have fundamental knowledge about functionality and anatomy of organs within different medical disciplines. The students further know about technical methods in diagnosis and therapy, common diseases, their relevance and costs. Finally the students are able to communicate with medical doctors in a way, in which they prevent misunderstandings and achieve a more realistic idea of each others expectations.

**Prerequisites**

none

**Content**

- Introduction: Definitions of “health” and “disease”. History of medicine and paradigm shift towards evidence based medicine and personalized medicine.
- Special topics: nervous system, saltatory conduction, musculoskeletal system, cardio-circulatory system, narcosis, pain, respiratory system, sensory organs, gynaecology, digestive organs, surgery, nephrology, orthopaedics, immune system, genetics.

**Competence Certificate**

The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

The grade of the oral examination is the module grade.

**Competence Goal**

The students are able to systematically assess the risks of technical systems, assess the effects of possible accidents and define suitable safety measures. The lecture is divided into thematic blocks. Lecture block 01 is an introduction to the topic:

**Lecture block 02 risk management:**

- Technical risk analysis
- Requirements for protective devices
- hazardous material facilities
- Create and evaluate plant safety concept

**Lecture block 03 hazardous substances:**

- Effect / routes of intake of toxic substances
- characteristics of danger
- Safety-related parameters
- Apply the basics of occupational safety

**Lecture Block 04 Exothermic Chemical Reactions:**

- Recognize the causes of runaway reactions
- Identify and assess dangers
- Assess heat balances of reactors

**Lecture block 05 safety devices:**

- Types and areas of application of safety devices
- Function and characteristics of safety valves
- Design of safety devices

**Lecture block 06 restraint systems:**

- Types and areas of application of restraint systems
- Cyclone separators and gravity separators
- Emergency cooling and stop systems

**Lecture block 07 Dispersion of hazardous substances:**

- Spread of pollutants
- Incident assessment values
- Recommendations for companies
- Assess emergency relief facilities

**Lecture block 08 PLT protective devices:**

- Classify PLT facilities
- Design of PCT protective devices
- Evaluate the use of existing PCT protective devices

**Lecture block 09 explosion protection:**

- Explosion areas in two-substance systems / three-substance systems
- Safety-related key figures
- Protective measures to avoid explosions

**Lecture block 10 electrostatics:**

- Forms of electrostatic charging and discharging of objects and devices
- Protective measures against explosions

**Prerequisites**

### Competence Goal

Skills to develop holistic processes for product design. Knowledge about task of engineers in process industry.

### Module grade calculation

The grade of the oral examination is the module grade.

### Prerequisites

None

### Content

Teaching of methods and creating awareness about boundary conditions related to scientific and systematic engineering approaches in process development. In Bachelorstudies and during basic studies in process technology focus was laid on the description/analysis of different physical phenomena. Their linkage in the course of selection, dimensioning, interconnection and optimization of apparatuses/ machines and their integration during process development will be outlined and illustrated by a variety of real-life examples.

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

The grade of the oral examination is the module grade.

**Competence Goal**

Students are able to sum up and explain equilibrium and kinetic equations relevant for chromatography modeling. They are able to explain the methods used for determination of equilibrium and kinetic parameters and can discuss examples. They are familiar with the principle of complex downstream processes, e.g. simulated moving beds, and can explain the differences to conventional chromatography. Using commercial software they are able to simulate chromatography processes and to analyze the results. On this basis they can optimize process parameters and fit them in order to meet given targets such as purity or yield. They can evaluate different processes and choose the variant for a given task.

**Prerequisites**

None

**Content**

**Competence Certificate**

The module exam consists of three partial performances:

- A written examination of 180 minutes according to § 4 (2) Nr. 1 SPO
- An internship in process and plant engineering, ungraded study achievement according to § 4 (3) SPO
- An admission exam to the practical course process and plant engineering, ungraded study achievement according to §4 (3) SPO

Module grade is the grade of the written exam.

**Competence Goal**

The students are enabled to analyze technical processes and plants and describe the process on the basis of P&I-diagrams. They are capable to apply their engineering and process engineering basics on industrial processes and plants. They are prepared to design and evaluate process steps and process chains based on simplistic assumptions and characteristic numbers.

**Prerequisites**

The initial exam is precondition for the practical course.

**Content**

- Engineering basics: P&I-diagram, flowsheet simulation, process optimization, safety, economical evaluation
- Application of engineering basics in practical course
- Process engineering in technical application, industrial production processes: e.g. steamcracker, methanol, sulfuric acid, ammonia, cement, pulp

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

The students become able to:

- understand and assess the technical background of the key elements of process chains for the utilization of renewable resources,
- build up the ability for the development of process chains from biomass production via the conversion processes up to product design,
- apply the lessons learned to develop closed process chains for sustainable production of, as example, platform chemicals or material from renewable resources.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

The course comprises the following contents:

- Introduction to building a common knowledge base, among others the presentation of today's most important utilization pathway for biomass, biomass potentials, future usage scenarios,
- Essential technical fundamentals for biomass processing. The focus is on the use of lignocellulosic biomass. Procedures for pretreatment, biomass decomposition and separation as well as for conversion of the respective fractions are learned,
- Systematics and analysis of process chains with renewable raw materials based on already established processes such as paper or sugar mills. Extension of the concepts to possible future biorefineries,
- In the exercise, parallel to the lecture, the learned will be applied and implemented by development of an exemplary biorefinery. The results will be presented in a semiar.

The grade of the oral examination is the module grade.

**Competence Goal**

Students have gathered insight into their role and professional tasks during industrial product design.

**Prerequisites**

None

**Content**

Continuous product innovation is decisive for the competitiveness of companies. The module introduces to the principle of “conceptual product design”. The principle will be explained by lecturing, by exercising and by viewing and discussing a truly instructive movie on the topic. The understanding of the principle is deepened on the subjects of “crystallization” and “colloidal systems”. The principle of “conceptual product design” comprises on the one hand the notion of a “process function”, which is the functional relation between process parameters and physico-chemical product properties, and on the other hand the notion of a “property function”, which is the functional relation between these properties and the product quality.

**Competence Goal**

The students are able to ...

- classify product development in companies and differentiate between different types of product development.
- name the relevant influencing factors of a market for product development.
- name, compare and use the central methods and process models of product development within moderate complex technical systems.
- explain problem solving techniques and associated development methods.
- explain product profiles and to differentiate and choose suitable creative techniques of solution/idea generation finding on this basis.
- use design guidelines to create simple technical systems and to explain these guidelines.
- name and compare quality assurance methods; to choose and use suitable methods for particular applications.
- explain the different methods of design of experiment.

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).  
 The grade of the oral examination is the module grade.

**Competence Goal**

The students are enabled to balance modern processes for the production of liquid fuels and to put them into context of a modern refinery. This knowledge can be transferred to the evaluation and the development of other processes.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Introduction to liquid chemical fuels: sources, resources/reserves, consumption, characteristic properties of raw materials and products, overview of conversion processes.

Petroleum and petroleum refining: characterization of petroleum crude oils and refinery products, physical separation processes, chemical conversion/upgrading processes (chemical equilibrium, reaction technology etc.), refinery structures.

Non-conventional liquid fuels e. g. from synthesis processes or biomass feedstocks (vegetable oil and derived fuels, alcohols, synthetic liquid fuels).

**Competence Certificate**

The examination is a written examination with a duration of 120 minutes (section 4 subsection 2 number 1 SPO).

**Competence Goal**

Students understand specific needs of liquid and solid formulations for life science application. They are able to select appropriate additives and understand their relevance for product preparation and stabilisation. They understand and master basics of formulation preparation and cope with the design of suitable processes. They are acquainted with conventional and innovative technologies. They identify correlations between process parameters and product performance. They are able to transfer process knowledge between different products.

Students are able to identify relevant parameters for product performance. They are able to select suitable scientific based characterisation methods and can discuss analytic results critically.

**Prerequisites**

None

**Content**

Additives and active substances (LV FT1: U. van der Schaaf/LVT):

Substance categories: Properties and molecular structure; Purposes and functionality: Interfacial activity, modulation of viscosity, etc.; Measurement techniques and newest developments.

Emulsification and Dispersion Technologies : (LV FT2: H.P. Karbstein/LVT) Characteristics of liquid formulations; processing objectives; fundamentals of particle desaggregation and disruption as well as droplet break-up; particle and droplet stabilization in liquid continuous phase; apparatus design and operation principle; process design; process and property function for preparation of liquid formulations; characterisation of liquid formulation properties: fundamentals and measurement devices; innovative developments.

Drying of dispersions: (LV FT3: H.P. Karbstein/LVT)

Objectives of drying, fundamentals of product stabilisation for extended shelf life; processes using the examples of spray drying, drum drying, freeze drying: operation principles, apparatus design, process design, process function; fundamentals of powder quality characterization, instant properties, fundamentals and measurement devices; agglomeration for improved instant properties.

Extrusion Technology: (LV FT4: M. A. Emin/LVT)

Fundamentals of extrusion and extruded product design, extrusion equipments, process design, characterization of the products and process (fundamentals of instrumentation and modeling)

This lecture is prerequisite for practical extrusion course, which is offered as an optional course (i.e. NF or VF LVT).

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

The grade of the oral examination is the module grade.

**Competence Goal**

The students

- Know the special characteristics of solar energy
- Can explain how the various solar concentrating techniques work
- Know how concentrated solar radiation can be coupled into different processes
- Know about different storage systems and how they are integrated into a process
- Know the specific challenge of using solar energy and how to solve them
- Can design simple systems for specific operating conditions and locations

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

The lecture Solar Process Technology describes the use and integration of concentrating solar technology in various high-temperature processes. After the introduction of the basics of solar radiation, the techniques with which direct solar radiation can be concentrated will be explained. The focus of the lecture is on the coupling of solar high-temperature heat in high-temperature processes, which can thus be operated solely or partially solar. Power-generating processes, purely thermal high-temperature processes and chemical processes are explained. From the large number of existing processes, a few examples are selected and the challenges of solar operation as well as the technical implementation are shown. The necessary development steps in different areas, such as materials science, process control and reactor technologies are explained and the development from the laboratory to the pilot scale is clarified. Cross-cutting issues that play a significant role in all processes are the use of storage systems and the hybrid operation of processes. Various thermal and chemical storage systems are discussed and their inclusion in and adaptation to the processes are exemplified. The hybrid operation of processes is explained in more detail.

**Competence Certificate**

Learning control is an oral examination with a duration of about 30 minutes.

**Competence Goal**

A deep understanding of the physico-chemical effects at the surface of the dispersed phase in dispersions and the consideration of their interaction with the dispersity degree as precondition for understanding and optimizing processes involving dispersions.

**Module grade calculation**

The module grade is the grade of the oral examination.

**Prerequisites**

None

**Content**

Definitions, Applications and stability of dispersions; Molecular – kinetic properties of dispersions: Thermal molecular motion and Brownian motion, Diffusion in solutions and dispersions, sedimentation stability; Adsorption at solid-gas interface: Nature of adsorption forces, Langmuir monomolecular adsorption theory, polymolecular theory of Polany and BET-theory, capillary condensation, chemical adsorption, kinetic of adsorption, influence of the properties of adsorbent and adsorptive on adsorption; Adsorption at solution-gas interface: Surface tension, surface active and inactive substances, Adsorption equation of Gibbs, Shishkovsky-equation and the derivation of Langmuir-equation, effects of the structure and size of tenside molecules, structure of the adsorbed layer; Adsorption at solid-solution interface: Molecular adsorption from the solution, ionic adsorption, wetting phenomena; Electrical properties of dispersions, Introduction to electrokinetic phenomena, structure of the electric double layer (Theories of Helmholtz – Perrin, Gouy-Chapman and Stern), Effects of electrolytes on zeta-potential, Electrophoresis and Electroosmosis, Measurement of zeta-potential; Stability and Coagulation of dispersions: Kinetic of coagulation, interparticle energy potential, solvation, structural-mechanical and entropy effects, coagulation through electrolytes, adsorption phenomena and coagulation; Applications in Crystallization and Solid – Liquid Separation.

### Competence Certificate

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).  
 The grade of the oral examination is the module grade.

### Competence Goal

The students are enabled to characterize different waste fractions and select suitable technologies for waste to energy conversion based on detailed process understanding and by application of evaluation tool combining economical and ecological aspects. The students gain a profound inside into process operation.

### Module grade calculation

The grade of the oral examination is the module grade.

### Prerequisites

None

### Content

- Waste: definition, specification, potential
- Basic thermo-chemical processes for waste treatment: pyrolysis, gasification, combustion
- Technical systems for thermal waste treatment:
  - combustion: Grate furnace, rotary kiln, fluidized bed
  - gasification: fixed bed, fluidized bed, entrained flow
  - pyrolysis: rotary kiln
  - Refractory technology
  - Legal aspects of waste management
  - Tools for critical evaluation of waste treatment technologies
  - Excursion to industrial sites

### Competence Certificate

The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

### Competence Goal

- The students understand the similarity between momentum, heat and mass transfer.
- The students are able, based on the analogy between laminar and turbulent transport, to explain and quantify the “turbulent” diffusion.
- The students are able to evaluate measured distribution of turbulent parameters.
- Based on the turbulence and heat release interaction the students are able to evaluate experimental results of turbulent flames.

### Module grade calculation

The grade of the oral examination is the module grade.

### Prerequisites

None

### Content

Turbulence characterization; Derivation of the balance equations for mass, momentum and energy; Turbulent momentum, heat and mass transport; Derivation of the balance equation for the kinetic energy of the mean and fluctuating flow field; Derivation of the balance equation for enstrophy of the mean and fluctuating flow field; The turbulent energy cascade process; The interaction between turbulence and heat release by turbulent premixed flames.

### Competence Goal

Application of basic principles of engineering on the special problems of a municipal utility company.

### Module grade calculation

The module grade ist the grade of oral examination.

### Content

The master course "Transport and Storage of Chemical Energy Carriers" teaches the fundamentals of two important steps of today's energy supply chain: transportation and storage. The transportation of chemical energy carriers from the source to the consumer is discussed in detail and options for storage are presented. The lecture also teaches the basics of organization and management of utilities companies and the basics of economics (profitability analysis, cost estimation). Lecturers are renowned experts from industry and research.

- Energy Resources / Chemical Energy Carriers
- Distribution Systems
- Natural Gas Utilization
- Organisation and Management Systems
- Fundamentals of Economics
- Profitability Analysis
- Conversion Processes
- Odorants and Odorization
- Gas Appliances and New Technologies
- Production, Upgrading and Injection of Gases from RES
- Estimating the Capital Expenditure of Chemical Plants

### Competence Certificate

Learning control is an oral examination with a duration about of 15 minutes (section 4 subsection 2 number 2 SPO).

### Competence Goal

Students understand and are able to explain conventional methods for producing foods, even complex ones, from animals. They know process chains and unit operations of relevance, both conventional and innovative approaches. They are able to design the processes according to raw material specifics. They identify correlations between process parameters and quality-determining properties of food. They are also able to transfer process knowledge between individual product groups. They know essential aspects required to assess sustainability and energy aspects of the individual process steps and complete process chains.

Students are able to apply principles of product design. This involves identifying the relationships between process parameters and the structure of a food product (process function) as well as between the inner structure of foods and their properties (property function). Based on this, they are able to analyze and solve problems in the field of food process engineering.

Students are able to use their knowledge to evaluate a process unit with regard to food production, involving aspects such as sustainability, energy efficiency, food safety or expected product quality.

### Module grade calculation

Grade of the module is the grade of oral examination.

**Competence Certificate**

- 'Teilleistung' T-BGU-109265 with not graded accomplishment according to § 4 Par. 3 as examination prerequisite
- 'Teilleistung' T-BGU-109948 with written examination according to § 4 Par. 2 No. 1

details about the learning controls see at the respective 'Teilleistung'

**Competence Goal**

Students acquire knowledge about typical techniques in wastewater treatment at local and international level. They are able to perform a technical evaluation and describe dimensioning approaches taking into consideration legal boundary conditions. Students analyze, evaluate and optimize operation of plant technologies. They focus on energy-efficient plant designs considering the most relevant factors affecting the total costs. Students can analyze the situation in emerging and developing countries making a comparison with that in industrialized countries. Based on that, they are able to develop water-related management strategies.

**Module grade calculation**

grade of the module is grade of the exam

**Prerequisites**

none

**Content****Municipal Wastewater Treatment:**

Students gain deep knowledge about design and operation of typical process technologies in municipal wastewater treatment in Germany. Following processes are covered:

- different activated sludge processes
- anaerobic technologies and energy-recovery systems
- filtration technologies
- wastewater disinfection and pathogen removal
- chemical and biological phosphorus removal
- micro-pollutants removal
- resource management and energy efficiency

**International Sanitary Engineering:**

Students get acquainted with the design and operation used for wastewater treatment at international level. They analyze, evaluate and take decisions when new and more holistic oriented methods can be implemented. Following topics are covered:

- activated sludge processes
- trickling filters and rotating biological contactors
- treatment ponds
- retention soil filter / Wetlands
- UASB/EGSB/Anaerobic filter
- decentralized versus centralized systems
- material flow separation
- energy-recovery from wastewater
- drinking water purification
- waste management

**Recommendation**

module 'Urban Water Infrastructure and Management'

**Annotation**

none

**Workload**

contact hours (1 HpW = 1 h x 15 weeks):

- Municipal Wastewater Treatment lecture/exercise: 30 h
- International Sanitary Engineering lecture/exercise: 30 h

independent study:

- preparation and follow-up lecture/exercises Municipal Wastewater Treatment: 30 h
- preparation of Term paper 'International Sanitary Engineering' (exam prerequisite): 45 h
- examination preparation: 45 h

total: 180 h

**Competence Certificate**

The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Students can explain links between the geogenic and anthropogenic occurrence and the concentration of organic and inorganic compounds in the hydrological cycle. They get knowledge about the analysis of the water constituents and of microorganism in the water samples. They are able to do calculations, and to compare and interpret data. They will learn how to use different methods, and to interpret water quality assessment.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Various types of water, legislation, analytical definitions, sampling methods, quick test methods, field investigations, organoleptic determinations, general investigations, optical characterization (turbidity, color, UV, Lambert-Beer's law, photometry), titrations, acid-base-systems, buffering, main inorganic compounds (anions, cations, occurrence, ion chromatography, titration, complexometry, flame photometry, atomic spectroscopy), heavy metals and metalloids (occurrence and main methods for determination), organic compounds and organic micropollutants (occurrence, liquid chromatography, infrared spectroscopy, gas chromatography), water specific sum parameters (DOC, AOX, AOS, CSB, BSB), microbiology.

**Competence Certificate**

Oral exam, 30 min

**Competence Goal**

Students learn fundamental knowledge in water chemistry and how to apply it to processes in aquatic systems in general and in reactors for water treatment. Water treatment will be taught for drinking water and partly waste water. The students are able to apply physical, chemical and biochemical treatment for the respective removal of particulate and dissolved components in water. They are able to use the fundamental design parameters for the different types of unit operations.

**Prerequisites**

None

**Content**

Water cycle, different types of raw water (ground and surface water). Water as solvent, carbonate balance, differentiation between microbiological and chemical population. Unit operations: sieving, sedimentation, filtration, flocculation, flotation, ion exchange, aeration, oxidation, disinfection, adsorption). For all unit operations design parameters will be provided. Simple 1D models will be discussed for description of kinetics and retention time in reactors for water treatment.

**Workload**

Attendance time: 45 h

Preparation/follow-up: 60 h
