5.44. Fluidynamics, Tutorial - T-CIWVT-101904	115
5.45. Food Biotechnology - T-CIWVT-101898	116
5.46. Food Technology - T-CIWVT-103528	117
5.47. Food Technology Project Work - T-CIWVT-103529	118
5.48. Formulation and Characterisation of Energy Materials - Exam - T-CIWVT-113478	119
5.49. Formulation and Characterisation of Energy Materials - Project Work - T-CIWVT-113479	120

5.50. Fundamentals of Heat and Mass Transfer - T-CIWVT-101883	121
5.51. Fundamentals of Refrigeration, Oral Examination - T-CIWVT-109117	122
5.52. Fundamentals of Refrigeration, Project Work - T-CIWVT-109118	123
5.53. General Chemistry and Chemistry of Aqueous Solutions - T-CIWVT-101892	124
5.54. Genetics - T-CIWVT-111063	125
5.55. Global Material Cycles - T-CIWVT-112372	126
5.56. Industrial Business Administration - T-WIWI-100796	127
5.57. Internship - T-CIWVT-106036	128
5.58. Introduction to Informatics and Algorithmic Mathematics - Exam - T-MATH-102250	129
5.59. Introduction to Thin Film Technology - Exercises and Lab - T-CIWVT-114693	130
5.60. Introduction to Thin Film Technology - Project Work - T-CIWVT-114692	131
5.61. Kinetics and Catalysis - T-CIWVT-106032	132
5.62. Laboratory Enzyme Technology - T-CIWVT-111075	133
5.63. Laboratory Work Bioprocess Engineering - T-CIWVT-111073	134
5.64. Laboratory Work General Chemistry and Chemistry in Aqueous Solutions - T-CIWVT-101893	135
5.65. Laboratory Work: Biology for Engineers - T-CIWVT-103331	136
5.66. Laboratory Work: Downstream Processing - T-CIWVT-111097	137
5.67. Lecture Series Supplementary Studies on Science, Technology and Society - Self Registration - T-FORUM-113578	138
5.68. Mechanical Processing - T-CIWVT-101886	139
5.69. Mechanical Separation Technology Exam - T-CIWVT-103448	140
5.70. Mechanical Separation Technology Project Work - T-CIWVT-103452	141
5.71. Membrane Technologies in Water Treatment - T-CIWVT-113236	142
5.72. Micro Process Engineering - T-CIWVT-103667	143
5.73. Micro Process Engineering - T-CIWVT-103666	144
5.74. Microbiology - T-CIWVT-111065	145
5.75. Organic Chemistry for Engineers - T-CHEMBIO-101865	146
5.76. Particle Technology Exam - T-CIWVT-106028	147
5.77. Process and Plant Design in Biotechnology - Seminar - T-CIWVT-114498	148
5.78. Process and Plant Design in Biotechnology - Written Exam - T-CIWVT-114499	149
5.79. Process Development and Scale-up - T-CIWVT-103530	150
5.80. Process Development and Scale-up Project Work - T-CIWVT-103556	151
5.81. Registration for Certificate Issuance - Supplementary Studies on Science, Technology and Society - T-FORUM-113587	152
5.82. SmartMentoring - Group Management - T-CIWVT-111761	153
5.83. Thermal Process Engineering - T-CIWVT-101885	154
5.84. Thermal Process Engineering II - T-CIWVT-114107	155
5.85. Thermodynamics for Bioengineering - T-CIWVT-114497	156
5.86. Thermodynamics I, Exam - T-CIWVT-101879	157
5.87. Thermodynamics I, Tutorial - T-CIWVT-101878	158
5.88. Thermodynamics II, Exam - T-CIWVT-101881	159
5.89. Thermodynamics II, Tutorial - T-CIWVT-101880	160
5.90. Tutorial Advanced Mathematics I - T-MATH-100525	161
5.91. Tutorial Advanced Mathematics II - T-MATH-100526	162
5.92. Tutorial Advanced Mathematics III - T-MATH-100527	163

1 General Information

1.1 Study program details

KIT-Department	KIT Department of Chemical and Process Engineering
Academic Degree	Bachelor of Science (B.Sc.)
Examination Regulations Version	2015
Regular semesters	6 semesters
Maximum semesters	12 semesters
Credits	180
Language	German
Grade calculation	Weighted by (Weight * CP)
Additional Information	Link to study program www.ciw.kit.edu Department https://www.ciw.kit.edu/1628.php Business unit Studium und Lehre https://www.sle.kit.edu/vorstudium/bachelor-bioingenieurwesen.php

1.2 Qualification Goals

The focus of bioengineering is on process engineering in the context of an industrial, engineering-driven application of biological and biotechnological principles. In this way, bioengineering differs from natural sciences programs, biotechnology or molecular biotechnology, which deal primarily with the utilization of biological principles. Bioengineers make a crucial contribution to the development of interdisciplinary approaches for creating an energetically and materially sustainable, post-fossil economy.

The Bachelor's program provides knowledge on scientific fundamentals and methodical expertise in the area of bioengineering. The Bachelor's degree will qualify students to apply the acquired theoretical knowledge to a specific professional field. Furthermore, students will gain the knowledge and skills that are necessary to complete a Master's program successfully.

The compulsory program in the first and second year focuses on methodical and qualified fundamental knowledge of mathematics, natural sciences, biotechnology and engineering. The main focus is on process engineering of biological material systems, reactions and processes in theory (basic lectures) and practice (introductory laboratory courses).

The knowledge acquired in the first and second year is not only the basis for the third year of the Bachelor's program, but also for the following Master's studies. Mandatory elective courses in the third year of study offer the opportunity to gain in-depth knowledge in a specialist area for the first time. These mandatory elective courses comprise technological aspects and a practical project work (group work). Within their Bachelor's thesis, students prove the ability of working on specialized problems independently and within a defined time frame using scientific methods.

Graduates are qualified to identify, abstract, and solve technical problems using the basic knowledge provided during the Bachelor's program. Furthermore, they can evaluate biotechnological products and processes systematically as well as select and apply analyzing and simulation tools. They are able to combine theory and practice as well as to organize and implement projects independently. Graduates are able to collaborate with experts in other fields.

Mandatory				
M-CIWVT-100877	Orientation Exam	DE	WS+SS	0 CP

3.2 Bachelor's Thesis

Credits

12

Prerequisite:

The Bachelor thesis may only be started when the requirements (at least 120 LP) have been fulfilled.

Procedure for registering the Bachelor's thesis

Registration for the Bachelor's thesis is handled by the Bachelor Examination Board:

- Registration before starting the thesis
- If possible, send documents to the Bachelor Examination Board via the Institute Secretariat.
- The Bachelor Examination Board requires the following documents no later than four weeks after the start of the work
 - Admission certificate <https://www.ciw.kit.edu/1838.php> filled out and signed
 - Copy of the assignment (signed by the person submitting the assignment)
- The Bachelor Examination Board will record and register the Bachelor thesis in the campus management system. The deadline for submission is also recorded by the Bachelor Examination Board.

Submission of the Bachelor's thesis:

- The maximum processing time is four months. The submission deadline is recorded in the campus management system. The thesis must be handed in within the deadline.
- When submitting the Bachelor's thesis, students must declare that they have written the thesis independently and have not used any sources or aids other than those specified. The exact wording can be found in the study and examination regulations.
 - The following must be handed in 1 copy at the dean's office/at the Bachelor Examination Board.
 - Handing in at the supervisor after consultation
- The date of submission is the date of submission to the Bachelor Examination Board.

3.8 Specialization/ Project Work

Credits

12

In the fifth semester the possibility of profile building exists for the first time. Eleven specialization subjects are available. The size and structure of these specialization subjects are similar. All specialization subjects extend over two semesters, start in the winter semester and end at the end of May at the latest. In the winter semester, lectures usually take place in which extended, subject-specific knowledge is imparted. Subsequently, research-related project work is carried out in small groups. Prerequisites for participation in the profile subjects are at least 60 ECTS and at least one successfully completed internship (e.g. general and inorganic chemistry, process engineering,...).

The learning control of specialization subjects consists of two parts which are listed in the description of the module description (e.g. oral examination and presentation of the project work). The specialization subject is only passed if both partial examinations are passed (evaluated with at least "sufficient"). A failed partial performance can only be repeated once. Dates for repeat exams will be agreed with the person responsible for the subject.

As the practical work is carried out in the laboratory, the number of participants in the individual specialization subjects is limited. The registration for the specialization subjects is usually possible in July. Within a registration period of two weeks, students have the opportunity to choose their preferred subject (at least one first and one second wish). After the registration deadline, the places will be allocated automatically, taking into account your wishes as far as possible.

Before the start of the registration period, an information event will be held on **22 June 2022** in which the individual subjects will be presented and the registration procedure explained.

The location and time of the information event will be published in good time on the faculty's and student council's homepages.

The registration process is divided into two stages:

In July, the desired profile subjects can be selected via the following portal <https://portal.wiwi.kit.edu/>

After the allocation you can choose your specialization subject in the Study Portal, the choice is approved online by the faculty, afterwards the registration for the individual examinations is possible.

Election regulations

Elections in this field require confirmation.

Specialization/ Project Work (Election: 1 item as well as at least 12 credits)				
M-CIWVT-104458	Applied Thermal Process Engineering	DE	WS	12 CP
M-CIWVT-106477	Automation and Control Systems Engineering <i>First usage possible from Oct 01, 2023.</i>	DE	WS	12 CP

3.9 Interdisciplinary Qualifications

Credits

6

A total of 6 LPs must be completed in the area of "soft skill qualifications" during the Bachelor's programme. Non-technical modules, such as modules from other subject areas, language courses or other courses offered by the House of Competence (HoC) or the Centre for Applied Cultural Studies and General Studies (ZaK), belong to interdisciplinary qualifications.

Election notes

3 of the 6 LPs are fixed: At least one of the following modules must be selected:

- Ethics and Global Material Cycles
- Industrial Business Administration

Modules in the range of 3 LP can be freely selected. The following can be done

- either the two above mentioned modules
- or any modules of at least 3 LP (e.g. HoC or ZaK courses)

can be selected.

Soft Skill Qualifications (Election: 2 items)				
M-CIWVT-101149	Ethics and Global Material Cycles	DE	SS	3 CP
M-WIWI-100528	Industrial Business Administration		Jährlich	3 CP
M-CIWVT-105848	SmartMentoring <i>First usage possible from Oct 01, 2021.</i>	DE	WS	3 CP
M-CIWVT-106534	Data-Driven Modeling with Python <i>First usage possible from Oct 01, 2023.</i>	DE	WS	3 CP

3.10 Additional Examinations

Additional Examinations (Election: at most 30 credits)				
M-CIWVT-102017	Further Examinations	DE	WS+SS	30 CP
M-FORUM-106753	Supplementary Studies on Science, Technology and Society <i>First usage possible from Oct 01, 2024.</i>	DE	WS+SS	16 CP

3.11 Master's Transfer Account

Students who have already earned at least 120 LP in their Bachelor's programme can earn credit points from a consecutive Master's programme at KIT up to a maximum of 30 LP.

Exams can be taken in the following subjects:

- Advanced Fundamentals
- Internship
- Soft Skill Qualifications

Further information on individual modules can be found in the module manual of the Master's program.

Within the first Master's semester, achievements can be taken over into the master program. Please contact the Master's Examination Board.

There is no obligation to transfer achievements from Master Transfer Account!

Election notes

Please note: Upon successful completion of all studies and exams needed for the bachelor's degree, a control of success registered as a prior master's examination may only be passed as long as you are enrolled in the bachelor's program. You should not yet have been admitted to the master's program and the master's semester should not yet have started.

This means that as soon as your admission to the master's program has been expressed and the master's semester has started, your participation in the examination is the **first regular examination** attempt within the framework of your master's studies.

Master Transfer Account (Election: at most 30 credits)				
M-CIWVT-101991	Single Results	DE	WS+SS	30 CP

Modelled Conditions

The following conditions have to be fulfilled:

1. You need to have earned at least 120 credits in the following fields:
 - Fundamentals of Biology and Biotechnology
 - Fundamentals of Scientific Engineering
 - Fundamentals of Mathematics and Natural Sciences
 - Specialization/ Project Work
 - Thermodynamics and Transport Processes
 - Interdisciplinary Qualifications
 - Fundamentals of Process Engineering

4 Modules

M

4.1 Module: Automation and Control Systems Engineering [M-CIWVT-106477]

Coordinators: Prof. Dr.-Ing. Thomas Meurer
Organisation: KIT Department of Chemical and Process Engineering
Part of: [Specialization/ Project Work](#) (Usage from 10/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version

T-MATH-100525	Tutorial Advanced Mathematics I <i>This item will not influence the grade calculation of this parent.</i>	0 CP	Arens, Griesmaier, Hettlich

Assessment

Learning assessment is carried by a written examination of length 120 minutes and by homework assignments (pre-requisite). A "pass" result on the pre-requisite is a requirement for registration for the corresponding written examination.

Prerequisites

none

Competence Goal

The students know the fundamentals of one-dimensional calculus. They can reliably use limits, functions, power series and integrals. They understand central concepts such as continuity, differentiability or integrability and they know important statements about these concepts. The students can follow the arguments leading to these statements as presented in the lectures and are able to independently prove simple assertions based on these statements.

Content

Fundamentals, sequences and convergence, functions and continuity, series, differential calculus of one real variable, integral calculus

Module Grade Calculation

The module grade is the grade of the written examination

Workload**In class: 90 hours**

- lectures, tutorials and examinations

Independent study: 120 hours

- independent review of course material
- work on homework assignments
- preparation for written exams

Literature

will be announced in class.

Assessment

Learning assessment is carried by a written examination of length 120 minutes and by homework assignments (pre-requisite). A "pass" result on the pre-requisite is a requirement for registration for the corresponding written examination.

Prerequisites

none

Competence Goal

The students know about the fundamentals of linear algebra. They are able to use vectors, linear maps and matrices without problems. They have basic knowledge about Fourier series. The students also can theoretically and practically deal with initial value problems of ordinary differential equations. They can make use of classical solution techniques for linear differential equations.

Content

vector spaces, linear maps, eigenvalues, Fourier series, differential equations, Laplace transform

Module Grade Calculation

The module grade is the grade of the written examination.

Workload**In class: 90 hours**

- lectures, tutorials and examinations

Independent study: 120 hours

- independent review of course material
- work on homework assignments
- preparation for written exams

Recommendations

The following modules should have been taken: Advanced Mathematics 1

Literature

will be announced in class.

Base For

Advanced Mathematics III

T-MATH-100527	Tutorial Advanced Mathematics III <i>This item will not influence the grade calculation of this parent.</i>	0 CP	Arens, Griesmaier, Hettlich

Assessment

Learning assessment is carried by a written examination of length 120 minutes and by homework assignments (pre-requisite). A "pass" result on the pre-requisite is a requirement for registration for the corresponding written examination.

Prerequisites

none

Competence Goal

The students know about differential calculus for vector-valued functions of several variables and about techniques of vector calculus such as the definition and application of differential operators, the computation of domain, line and surface integrals and important integral theorems. They have basic knowledge about partial differential equations and know basic facts from stochastics.

Content

Multidimensional calculus, domain integrals, vector calculus, partial differential equations, stochastics.

Module Grade Calculation

The module grade is the grade of the written examination.

Workload**In class: 90 hours**

- lectures, tutorials and examinations

Independent study: 120 hours

- independent review of course material
- work on homework assignments
- preparation for written exams

Recommendations

The following modules should have been taken before: Advanced Mathematics I and II

Literature

will be announced in class.

M**4.5 Module: Air Pollution Control [M-CIWVT-106448]**

Coordinators: Prof. Dr.-Ing. Achim Dittler
Organisation: KIT Department of Chemical and Process Engineering
Part of: [Specialization/ Project Work](#) (Usage from 10/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
12 CP	graded	Each winter term	2 terms	German	4	1

Mandatory			
T-CIWVT-113046	Air Pollution Control	7 CP	Dittler
T-CIWVT-113047	Air Pollution Control - Project Work	5 CP	Dittler

Assessment

The learning control consists of two partial achievements:

1. oral examination, duration 30 minutes
2. project work

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

Students understand transport behavior and methods of size distribution measurement of airborne fine particles in the context of environmental and nanotechnology. They are able to apply this knowledge to solve basic problems of particle technology in a team oriented approach.

Content

The classes provide a knowledge base of methods of particle dispersion, particle transport processes in gases, as well as methods for their characterization with applications in the environment and industrial product design. Practical experience related to these concepts is developed in a team based lab project.

Module Grade Calculation

The module grade is calculated from the grades of the two partial achievements:
 40 % project work, 60 % oral examination.

Workload

- Attendance time: 56 h (V+Ü) + 120 (project work) + 10 (Excursion)
- Self-Study: 24 h
- Oral examination: 140 h

Literature

Mandatory			
T-CIWVT-109120	Applied Thermal Process Engineering - Project Work	6 CP	Dietrich
T-CIWVT-110803	Applied Thermal Process Engineering - Exercises	6 CP	Dietrich

Assessment

The learning control consists of two module components:

- Exercises and lab (winter semester)
- Project work and presentation (summer semester)

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

Students can

- explain basic, future-oriented processes of applied thermal process engineering
- process chain of a scientific question up to its answer: planning, conceptual design, implementation, execution and evaluation of fundamental experiments, describing aspects for implementation on a technical scale (scale-up)
- work scientifically using standard IT tools
- present scientific results
- independently acquire specialist knowledge

Content

Within the scope of this module an insight into the current research of the institute is to be made possible, which deals with future-oriented topics, such as renewable energy concepts, electromobility and energy storage. Three basic experiments in the fields of drying, heat transfer and crystallization are offered in the form of a project work.

First, the corresponding technical and methodological fundamentals are presented in a lecture. This also includes the transfer of necessary knowledge for the preparation of a scientific report or a scientific presentation as well as the use of special Excel tools such as solvers or macros. In special workshops at the TVT the lecture contents can be trained. Subsequently, experiments are carried out in the laboratory using modern, partly self-assembled measuring technology (e.g. temperature sensors based on single board computers / Arduino) on the respective topic. The evaluation is carried out using the basics laid down in the lecture and with the aid of corresponding chapters of the VDI heat atlas. The results are summarized in a work report. In the following step, a design calculation for the industrial scale-up with corresponding specifications of the required devices is prepared for one of the basic experiments. The design achieved is to be presented to the other students of the profile subject in a scientific seminar. The practical part is rounded off by an excursion to BASF in Ludwigshafen, which provides insights into the application of what has been learned in industrial implementation.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

Lectures and exercises: 100 h

Homework: 160 h

Laboratory work (incl. interpretation and report): 100 h

Recommendations

The successful participation in the lecture "Basics of Heat and Mass Transfer" of the TVT is an advantage.

M**4.7 Module: Biology for Engineers I [M-CIWVT-101624]**

Coordinators: Prof. Dr. Christoph Syldatk
Organisation: KIT Department of Chemical and Process Engineering
Part of: [Fundamentals of Biology and Biotechnology](#)

Credits	Grading	Recurrence	Duration	Language	Level	Version
5 CP	graded	Each winter term	1 term	German	3	2

Mandatory			
T-CIWVT-111062	Cell Biology	3 CP	Gottwald
T-CIWVT-111063	Genetics	2 CP	Neumann

Assessment

The module is successfully completed by

- a written exam "Cell Biology" of 90 min
- a written exam "Genetics" of 90 min

Prerequisites

None

Competence Goal

Cell-biology: Identification of pro- and eukaryotic cells, identification of pro- and eukaryotic cellular constituents, knowledge of basic metabolic pathways, knowledge of the most important molecule classes and their occurrence, ability to operate a light microscope and knowledge of the underlying theory, being able to select bioreactors according to the application.

Genetics: Students are able to give a detailed description of basic aspects of molecular genetics in pro- and eukaryotes and can explain genetic processes in their own words. Basic aspects are in particular: Structure and organization of nucleic acids, mechanisms of replication, transcription, translation, regulation of gene expression, recombination, transposition, DNA repair mechanisms and genetic basics of virology. Furthermore, students are able to apply their basic knowledge by explaining graphics or by transferring their knowledge to gene technological methods.

Content

Cell biology: Microscopy; Cell structure of pro- and eukaryotes; Eukaryotic cell compartments; Structure and function of macromolecules; Communication between cells; Cell cycle.

Genetics: Nucleic acids; Chromatin and chromosomes; Genes and genomes; Replication; Transcription; Translation; Recombination; Mutations and DNA repair mechanisms; Gene regulation; Methods and applications of molecular gene technology.

Module Grade Calculation

The module grade is calculated from the LP-weighted average of both parts of the module.

Workload

Attendance time: Lecture of 4 SWS: 60 h

Self-study time: 30 h

Exam preparation: 60 h

The module comprises two graded learning controls:

1. written examination last in 90 minutes.
2. practical work/ protocol/ presentation

- project plan
- project work
- poster presentation/ talk
- report

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You have to fulfill one of 8 conditions:
 1. The module M-CIWVT-101138 - Lab Work Process Engineering must have been passed.
 2. The module M-CIWVT-101139 - Process Machines must have been passed.
 3. The module [M-CIWVT-101722 - General Chemistry and Chemistry of Aqueous Solutions](#) must have been passed.
 4. The module M-CIWVT-101964 - Laboratory Work in General and Inorganic Chemistry must have been passed.
 5. The module [M-CHEMBIO-101115 - Organic Chemistry for Engineers](#) must have been passed.
 6. The module component [T-CIWVT-103331 - Laboratory Work: Biology for Engineers](#) must have been passed.
 7. The module M-CIWVT-106427 - Basic Practical Course in Natural Sciences must have been passed.
 8. The module M-CIWVT-106500 - Basic Practical Course must have been passed.
2. You need to have earned at least 60 credits in your study program.

Competence Goal

Basic understanding of processes and synthesis of processes in biotechnologic production

Lecture Bioanalytics:

The students can describe the selection and implementation of methods for the analysis of biomolecules. Students will be able to evaluate the advantages and limitations of the various methods with regard to their areas of application in biotechnological research in the context of various biomolecules (in particular DNA, RNA, proteins/enzymes, metabolites). Students are able to select suitable methods and experimental designs for their own (future) work in the context of qualitative and quantitative bioanalytics.

Lecture „Management of scientific projects“ and exercises:

The students are able to conduct literature research on their own, design own experiments, evaluate their own data, write own scientific texts. They can plan their own small project regarding time and finances required and prepare a project plan as well as present it. They can prepare a (scientific) poster and present it.

Project Work:

The students are able to do own scientific research and practical work in the field of biotechnology. They know how to analyse their own gained data and prepare a project report.

ContentLecture Bioanalytics:

The lecture will introduce the most important methods for the analysis of biomolecules. According to the genetic information flow in the cell, methods of bioanalysis for DNA, RNA, proteins/enzymes and metabolites are taught. The theory and application of methods are illustrated using research examples. Methods focus on sequencing technologies, protein analysis, enzymology, chromatographic methods and the basics of mass spectrometry and NMR. Other microscopy methods and reporter systems for analyzing biomolecules in whole cells are also presented.

Lecture „Management of scientific projects“ and exercises:

The lecture covers literature research, design of experiments, data evaluation, scientific writing and project management; in parts it is software-based and carried out in an electronic classroom.

Practical exercises cover literature research, preparation of a project plan, presentation of the project plan, preparation of a poster, presentation of the poster

Project Work:

Accomplishment of autonomous investigation and practical work in the field of biotechnology, preparation of a project report

Module Grade Calculation

weighted mean based on LP.

Workload

Bioanalytics:

- Lectures and Exercises: 30 h
- Homework: 30 h
- Exam Preparation: 30 h

Management of scientific projects:

- Lectures and Exercises: 45 h
- Homework: 45 h

Lab Work:

- Lab: 80 h
- Homework: 10 h

Project:

- Lab: 10 h
- Homework: 80 h

Literature

Will be announced.

M**4.11 Module: Chemical Process Engineering [M-CIWVT-101133]**

Coordinators: Prof. Dr.-Ing. Gregor Wehinger
Organisation: KIT Department of Chemical and Process Engineering
Part of: **Fundamentals of Process Engineering**

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	2

Mandatory			
T-CIWVT-101884	Chemical Process Engineering	6 CP	Wehinger

Assessment

Learning control is a written examination lasting 120 minutes.

Prerequisites

None

Competence Goal

Students can analyse and design reactors for chemical and enzymatic-biochemical conversions in homogeneous phase. They are able to promote the formation of a certain desired product in multi-step reactions, when parallel and consecutive steps can yield further products. Furthermore, students can apply balances of energy to identify conditions of safe reactor operation when exo- and endothermic reactions are run.

Content

Application of mass and energy balances for the analysis and design of ideal reactors for single-phase conversions, and for the identification of optimum operation conditions.

Module Grade Calculation

grade of the written examination

Workload

- Attendance time: lectures and exercises: 60 h
- self-study: 60 h
- preparation of examination. 60 h

Mandatory			
T-CIWVT-112172	Circular Economy - Oral Exam	8 CP	Stapf
T-CIWVT-112173	Circular Economy - Project Work	4 CP	Stapf

Assessment

The learning control consists of two partial achievements:

1. Oral exam on lectures, exercises and case studies, duration approx. 30 minutes.
2. Project work, examination of another type. The term paper and the presentation of the results are graded.

Prerequisites

Participation in the Specialization/ Project Work is only possible if the following achievements have been made:

- At least 60 credits
- At least one lab

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students understand important material systems and essential process steps of the provision and recycling of mineral and metallic raw materials and anthropogenic carbon. With the aim of closing cycles, they can use methods of process evaluation, such as analysis and assessment of process chains using efficiency indicators. To do this, students work on increasingly complex case studies in a team using scientific methods and finally apply these methods during project work.

Content

Introduction to transition in resources and technologies towards a sustainable circular economy. Knowledge acquisition in system analysis, in process efficiency assessment and in sustainability evaluation. Motivation for process engineering research and development in the field of sustainable raw material supply of a climate-neutral society:

- Material flow and process knowledge of the primary and the recycling industries
- Methodological knowledge (business management basics of relevance, material flow analysis, determination of performance indicators)
- Independent scientific work (application of knowledge, analysis, assessment) in case studies / as project work.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

Attendance time:

- Lectures and exercises: 45 h
- Project work: 80

Self-study:

- Wrap up lectures: 45 h
- Wrap up case studies: 60 h
- Preparation term paper and presentation: 40 h

Exam preparation: 90 h

M**4.14 Module: Control Engineering and System Dynamics [M-CIWVT-106308]**

Coordinators: Prof. Dr.-Ing. Thomas Meurer
Organisation: KIT Department of Chemical and Process Engineering
Part of: [Fundamentals of Scientific Engineering](#) (Usage from 4/1/2023)

Mandatory			
T-CIWVT-112787	Control Engineering and System Dynamics	5 CP	Meurer

Assessment

Learning control is a written exam, duration 120 minutes.

Prerequisites

None

Competence Goal

Provision of linear system theory and simple controls for technical systems to CIW and BIW engineers.

Content

Dynamic systems, Properties of important systems and modeling, Stability, Controller design, Estimation

Module Grade Calculation

The module grade is the grade of the written exam.

Workload

Attendance Time:

- Lectures: 30 hrs.
- Exercises: 15 hrs.

Self-study:

- Preparation and wrap-up lectures sample course: 60 hrs.
- Exam preparation: 45 hrs.

Literature

- Meurer: Regelungstechnik und Systemdynamik, Vorlesungsskript.
- Åström, R. Murray: Feedback Systems, Princeton University Press, 2008.

T-CIWVT-103642	Design of Machines, Exam	7 CP	Gleiß

Assessment

The learning control consists of two partial achievements.

1. Completed coursework (ungraded)/ prerequisite. 4 of 5 exercises have to be passed.
2. Written examination lasting 120 minutes.

Prerequisites

None

Content

Scientific drawing, introduction into material science with a focus on manufacturing and design of steel, design of machines and apparatuses, hygienic design

Module Grade Calculation

The module grade is the grade of the written exam.

Workload

Attendance time: lecture 2 SWH, exercises 3 SWH: 70 hrs

Self-study: 70 hrs

Preparation of exam: 70 hrs

Recommendations

Moduls of the 1st semester.

M**4.17 Module: Downstream Processing [M-CIWVT-101124]****Coordinators:** Prof. Dr. Jürgen Hubbuch**Organisation:** KIT Department of Chemical and Process Engineering**Part of:** [Fundamentals of Biology and Biotechnology](#)**Credits**

Mandatory			
T-CIWVT-101897	Downstream Processing	5 CP	Hubbuch
T-CIWVT-111097	Laboratory Work: Downstream Processing	2 CP	Hubbuch

Assessment

Learning control consist of

- written examination of 120 min duration
- Lab work

Prerequisites

None

Competence Goal

Overview on unit operations for protein separations and respective analytics used in the biotechnological industry.

Content

The elcture series adresses fundamentals in biotechnological purification of bio-products and respective analytics.

Lab:

Methods for the purification of proteins, which are based on solubility of proteins as well as on interactions between proteins and carrier materials. Sampling and sample preparation; protein characterisation; analytical methods for the determination of product concentrations; determination and calculation of the various process parameters; graphical representation and interpretation of the results; linearisation procedures; computer-aided process modelling and optimisation.

Module Grade Calculation

ECTS-weighted mean of written examination and lab work.

Workload

Lectures and exercises: 60 h

Homework: 50 h

preparation of examination: 40 h

Lab Work (one week):

Attendance time: 40 h

preparation and reports: 20 h

Recommendations

Courses of 1st - 3rd semester

Literature

will be announced

M**4.19 Module: Energy and Environmental Engineering [M-CIWVT-101145]**

Coordinators: Prof. Dr. Reinhard Rauch
Prof. Dr.-Ing. Dimosthenis Trimis

Organisation: KIT Department of Chemical and Process Engineering

Part of: [Specialization/ Project Work](#)

Credits	Grading	Recurrence	Duration	Language	Level	Version
12 CP	graded	Each winter term	2 terms	German	4	4

Mandatory			
T-CIWVT-103527	Energy and Environmental Engineering Project Work	4 CP	Rauch, Trimis
T-CIWVT-108254	Energy and Environmental Engineering	8 CP	Rauch, Trimis

Assessment

The learning control consists of two partial achievements:

- Written examination, duration 120 minutes
- Examination of another type, project work

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students will be able to discuss, analyze and compare applications in energy engineering and environmental protection (primary/secondary means, efficiency, raw materials etc.).

Content

Introduction into production of fuels (chemical energy carriers) from fossil and renewable sources and their use, prevention of formation of pollutants, removal of pollutants, review and selected examples, fundamentals and applications of high temperature energy conversion.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

Attendance time: 60 h

Excursions: 20 h

Self-Study: 90 h

Project work: 90 h

Exam preparation: 100 h

Recommendations

Courses of 1st - 4 th semester

Literature

lecture notes and specific literature indicated during lectures, additionally:

M**4.20 Module: Engineering Mechanics: Dynamics [M-CIWVT-101128]**

Coordinators: TT-Prof. Dr. Christoph Klahn
Organisation: KIT Department of Chemical and Process Engineering
Part of: [Fundamentals of Scientific Engineering](#)

Credits	Grading	Recurrence	Duration	Language	Level	Version
5 CP	graded	Each winter term	1 term	German	4	2

Mandatory			
T-CIWVT-101877	Engineering Mechanics: Dynamics, Exam	5 CP	Klahn
T-CIWVT-106290	Engineering Mechanics: Dynamics	0 CP	Klahn

Assessment

The learning control consists of two partial achievements

1. Completed coursework/ prerequisite
2. a written examination lasting 120 minutes

Prerequisites

None

Competence Goal

Students possess basic knowledge in Engineering Mechanics/Dynamics, they are familiar with problem solving and able to use this knowledge for theoretical analysis and solution of practical engineering problems.

Content

Kinematics and dynamics of mass point;
 Kinematics and dynamics of rigid body;
 The principle of linear momentum, angular momentum, work and energy theorem;
 Oscillation of the systems with one or more freedom degrees;
 Relative movement of mass point;
 Methods in analytical Mechanics, Lagrange equation;

Module Grade Calculation

grade of the written examination. Superior preliminary test can be credited according to §7,13 SPO.

Workload

lectures and exercises: 56 h
 self study: 56 h
 preparation for examination 40h

Recommendations

modules of 1. -2. semester.

Literature

M**4.21 Module: Engineering Mechanics: Statics and Strength of Materials [M-CIWVT-101733]**

Coordinators: Prof. Dr. Norbert Willenbacher
Organisation: KIT Department of Chemical and Process Engineering
Part of: **Fundamentals of Scientific Engineering**

Credits	Grading	Recurrence	Duration	Language	Level	Version
7 CP	graded	Each winter term	2 terms	German	3	2

Mandatory			
T-CIWVT-111054	Engineering Mechanics: Statics	5 CP	Hochstein, Oelschlaeger, Willenbacher
T-CIWVT-111056	Engineering Mechanics: Strength of Materials	2 CP	Hochstein, Willenbacher

Assessment

Learning control consists of two written examinations according to SPO section 4, subsection 2 No. 3:

- Statics, duration 90 minutes
- Strength of Materials, duration 60 minutes

Prerequisites

None

Module Grade Calculation

ECTS-weighted mean of the two written examinations.

Workload

- Lectures and exercises: 75 h
- Homework: 95 h
- Exam preparation: 40 h

M**4.22 Module: Enzyme Technology [M-CIWVT-105509]****Coordinators:** Prof. Dr.-Ing. Dirk Holtmann**Organisation:** KIT Department of Chemical and Process Engineering**Part of:** [Fundamentals of Biology and Biotechnology](#) (Usage from 10/1/2020)

3**Version**
4

Mandatory			
T-CIWVT-112372	Global Material Cycles	1 CP	Rauch
T-CIWVT-112373	Ethics	2 CP	Hillerbrand

Assessment

Examination consists of

1. Ethics: regular attendance at lectures and exercises; short presentation; written elaboration
2. Global Material Cycles: written examination (ungraded), duration 60 minutes.

Prerequisites

None

Competence Goal

Basic understanding of: Examples of global material cycles and effects caused by human societies, Important limitations for material and energy conversion by human societies (civilization, industrialization), Basic knowledge in engineering ethics, Competences in "handling" with ethical questions for engineers

Content

Bio-geosphere as environment for human life. selected examples of global material cycles. limits of man-made material and energy conversion. sustainability as term. priority rules for sustainability and for shaping the future. technology assessment, engineering codes. responsibility individual, collective, corporate

Workload

- lectures and exercises: 15 h
- homework: 45 h
- preparation of examination: 30 h

Literature

Mandatory			
T-CIWVT-101882	Fluidynamics, Exam	5 CP	Nirschl
T-CIWVT-101904	Fluidynamics, Tutorial	0 CP	Nirschl

Assessment

Learning control consists of:

1. written exam of 120 minutes duration according to § 4 (2) SPO.
2. Non-graded precondition for participation according to § 4 (3) SPO:
 either 4 of 5 compulsory exercises have to be approved
 or a group presentation has to be given during the lecture

Prerequisites

none

Competence Goal

The students have the ability to analyse, to structure and to describe problems in fluid dynamics. They also can use the specific methods for the calculation of specific flows with the studied tools. Besides they are able to discuss the different procedures critically.

Content

Fundamentals of fluid dynamics: hydro static, aerostatik, compressible and incompressible flows, turbulent flows, Navier-Stokes equations, boundary layer theory

Module Grade Calculation

grade of the written examination

Workload

lecture 2 SWH, exercises 2 SWH: 56 h

self-study: 56 h

preparation of examination: 56 h

German**Level**
3**Version**
2

Mandatory			
T-CIWVT-101898	Food Biotechnology	5 CP	Leister

Assessment

Learning control is a written examination lasting 120 minutes

Prerequisites

None

Competence Goal

The students will know about basics to secure food (and life science product) safety.

Content

The students will learn about microorganisms being important for food safety and biotechnological food production. Based on some historical products student will learn modern process technology. Technologies to secure food (and life science product safety) will be taught. Using actual case studies students will learn how food process engineers work. Process and product design will be rehearsed and practised in exercises and commented students' presentations.

Module Grade Calculation

The module grade ist the grade of the written examination.

Workload

Attendance time/ lectures and exercises:

- 30 hrs self-study using the materials provided in ILIAS.
- 30 hrs lectures and exercises: discussion of the independently prepared learning content

Selbststudium:

- 50 hrs wrap-up of lectures and exercises
- 40 hrs exam preparation

Recommendations

Independent preparation of the classroom sessions using material in the ILIAS course (videos, worksheets, sample assignments) is essential for participation.

4**Version**
5

Mandatory			
T-CIWVT-103528	Food Technology	5 CP	Leister
T-CIWVT-103529	Food Technology Project Work	7 CP	Leister

Assessment

The learning control consists of two partial achievements:

1. Oral examination (in the group) lasting approx. 45 minutes
2. Project work (presentation and report of results)

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students are able to design and evaluate simple food products. They learned to define, focus and solve tasks milestone-oriented as an interdisciplinary team. They gained in depth insight in the influence of recipe and process parameters on food quality parameters using a selected product produced on pilot scale. They will be able to present targets and results of their team project in a clear, conceptual and comprehensible manner.

Content

Lecture: Basic introduction to the design and quality assurance of selected foods;
project work (team work): definition, production and evaluation of selected products as a team; presentation and defense of the project and its results incl. degustation in a bigger group;
field trip to industrial production plants

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

- Attendance time: 115 hrs
(lecture 2 SWS, project work 5 SWS)
- self study: 185 hrs
(project design, project meetings, research on project work, lab, preparation and wrap-up)
- exam preparation: 60 hrs

Literature

Will be offered within the lecture, depending on products available

M**4.27 Module: Formulation and Characterisation of Energy Materials [M-CIWVT-106700]**

Coordinators: Dr.-Ing. Claude Oelschlaeger
Organisation: KIT Department of Chemical and Process Engineering
Part of: [Specialization/ Project Work](#) (Usage from 10/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
12 CP	graded	Each winter term	2 terms	German	4	1

Mandatory			
T-CIWVT-113478	Formulation and Characterisation of Energy Materials - Exam	8 CP	Oelschlaeger
T-CIWVT-113479	Formulation and Characterisation of Energy Materials - Project Work	4 CP	Oelschlaeger

Assessment

The learning control consists of two partial achievements:

1. project work (teamwise)
2. oral examinations (courses)

The oral examinations have to be passed as a precondition for project work

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

Basic knowledge about the design of complex fluids based on dispersions or emulsions by chemical engineering processes. Fundamental comprehension of applications and working properties, flow behavior and colloidal stability of disperse systems. Applying this knowledge in context of their project work. They gather experience in teamoriented problem solving.

Content

Representation of a systematic of the relation between the quality aspects of products and their physico-chemical properties. Furthermore, these properties are generated in the respective production processes. This systematics is fundamentally presented in the lecture "Fabrication and rheological characterization of energy materials". The application of this systematics is practiced on specific case studies.

M**4.28 Module: Fundamentals of Heat and Mass Transfer [M-CIWVT-101132]**

Coordinators: Dr.-Ing. Benjamin Dietrich
Prof. Dr.-Ing. Thomas Wetzel

Organisation: KIT Department of Chemical and Process Engineering

Part of: **Thermodynamics and Transport Processes**

Credits
7 CP

Grading

German

Level
3

Version
2

Mandatory			
T-CIWVT-101883	Fundamentals of Heat and Mass Transfer	7 CP	Dietrich, Wetzel

Assessment

Learning control is a written examination lasting 180 minutes.

Prerequisites

none

Competence Goal

Elaborating the fundamental physics and laws of heat and mass transfer and at the provision of knowledge about of the methodological tools required for solving engineering tasks in these fields.

Content

Heat Transfer: Definitions - System, balances and conservation equations, kinetics of heat transfer, heat conduction, heat radiation, heat transfer between solids and moving fluids, dimensionless numbers.

Mass Transfer: Kinetics of mass transfer, equilibrium, diffusion and mass flow, Knudsen- and multi-component diffusion, Lewis analogy of heat and mass transfer.

Module Grade Calculation

Grade of the written examination

Workload

- lecture: 75 h
- self-study: 55 h
- preparation of examination: 80 h

Recommendations

Courses of 1st - 3rd semester, especially fundamentals of thermodynamics.

Literature

v. Boeckh, Wetzel: Wärmeübertragung, Springer 2009

M**4.29 Module: Fundamentals of Refrigeration [M-CIWVT-104457]**

Coordinators: Prof. Dr.-Ing. Steffen Grohmann
Organisation: KIT Department of Chemical and Process Engineering
Part of: [Specialization/ Project Work](#)

Credits	Grading	Recurrence	Duration	Language	Level	Version
12 CP	graded	Each winter term	2 terms	German	3	4

Mandatory			
T-CIWVT-109117	Fundamentals of Refrigeration, Oral Examination		6 CP Grohmann
T-CIWVT-109118	Fundamentals of Refrigeration, Project Work		6 CP Grohmann

Assessment

The learning control consists of two partial achievements:

1. Project work/ presentation, examination of another type
2. Oral exam of about 30 minutes duration

The project work is a prerequisite for the oral examination.

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

Students are able to explain and apply the fundamentals of refrigeration to various refrigeration technologies. They are able to describe properties of refrigerants and working fluids, and to assess their environmental impact based in different criteria. The students can develop concepts of refrigeration and heat pump processes using phase diagrams and fluid property models, and they are able to explore the energy consumption based on first and second law analyses. They are able to design various circuit configurations, to dimension and select refrigeration compressors and heat exchangers, and to design suitable control systems.

Content

Introduction to the fundamentals of refrigeration, phase diagrams, energy transformation based on first and second law analyses, refrigerants and working fluids including their environmental impact, design of common refrigeration and heat pump processes, major circuit components and process control.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

Attendance time: Lecture 2 SWS, Exercises 1 SWS: 45 h

Self-Study: 60 h

Exam Preparation: 75 h

Project work including presentation: 180 h

Recommendations

None

1 term**Language**
German**Level**
3**Version**
1**Prerequisites**

None

M**4.31 Module: General Chemistry and Chemistry of Aqueous Solutions [M-CIWVT-101722]**

Coordinators: Prof. Dr. Harald Horn
Organisation: KIT Department of Chemical and Process Engineering
Part of: Fundamentals of Mathematics and Natural Sciences

Credits	Grading	Recurrence	Duration	Language	Level	Version
10 CP	graded	Each winter term	1 term	German	3	2

Mandatory			
T-CIWVT-101892	General Chemistry and Chemistry of Aqueous Solutions	6 CP	Horn
T-CIWVT-101893	Laboratory Work General Chemistry and Chemistry in Aqueous Solutions	4 CP	Horn

Assessment

The grade of the module consists of two individual grades:

1. written exam, 150 min to lecture " General Chemistry and Chemistry of Aqueous Solutions" (lecture 3 SWS, exercises 2 SWS)
2. practical course with grading: preceding written exam (15 min) and protocol after the experiments.

Prerequisites

A prerequisite for admission to the lab course: written exam passed.

Competence Goal

The students receive a basic knowledge of the general chemistry. They get basic knowledge about the periodic system of the elements, the chemical bonds, and the geometry of molecules. They can describe the principles and the criteria about the reactions in aqueous solutions, about acid and bases, reaction kinetics, the chemical equilibrium and electrochemistry. They can handle chemicals and can perform qualitative and quantitative analysis in aqueous solutions. They can perform calculations, and can apply the necessary tools to understand the context.

Content

Basics of general, inorganic and physical chemistry, lab experiments of qualitative analysis and reactions.

Module Grade Calculation

The overall grade of the module is taken as the average from the individual grades of the written examination of the lecture and the lab course, weighted according to the credit points.

Workload

- Attendance time lecture: 60 h
- Preparation/follow-up: 60 h
- Examination + exam. preparation: 60 h
- Attendance time practical course: 40 h, Preparation/follow-up: 80 h

Teaching and Learning Methods

- 22667 Allgemeine Chemie und Chemie in wässrigen Lösungen, V, 3 SWS, 4 LP
- 22668 Übung zu 22667, Ü, 2 SWS, 2 LP
- 22669 Praktikum zu 22667, 4 LP
- Zusätzlich werden Tutorien angeboten: 22670/ 22671

Literature

Mandatory			
T-WIWI-100796	Industrial Business Administration	3 CP	Fichtner

Assessment

The assessment of this course is a ungraded written examination (60 min) according to §4(2), 1 of the examination regulation.

Prerequisites

None

Competence Goal

Students are able to describe and differentiate legal forms for industrial enterprises.

Students will gain knowledge about different ways of financing to raise capital.

The students gain knowledge about the basics of financial accounting and are able to record and book performance and capital flows occurring in companies.

The students gain knowledge about different types of cost accounting and are able to apply them.

Students gain knowledge of the basics of investment planning and are able to evaluate investments economically.

The students gain knowledge about the basics of linear optimization and can solve simple optimization problems with the Simplex algorithm.

The students gain knowledge about basic marketing methods and can describe and differentiate them from each other.

The students gain knowledge about basic methods of project management and can apply them to practical examples.

Content

- Goals and basics
- Legal framework for industrial enterprises
- financial accounting
- cost accounting
- investment calculation
- optimisation
- network technique

Workload

The total workload for this course is approximately 90 hours.

M**4.33 Module: Introduction to Informatics and Algorithmic Mathematics [M-MATH-101337]****Coordinators:** Prof. Dr. Willy Dörfler**Organisation:** KIT Department of Mathematics**Part of:** Fundamentals of Mathematics and Natural Sciences

Credits	Grading	Recurrence	Duration	Language	Level	Version
5 CP	graded	Each summer term	1 term	German	3	1

Mandatory			
T-MATH-102250	Introduction to Informatics and Algorithmic Mathematics - Exam	5 CP	Dörfler, Krause

Assessment

graded: written examination

Prerequisites

compulsory preconditions: none

recommendation: courses of 1st - 3rd semester

Competence Goal

Higher programming languages, design and description of algorithms, basic algorithms from mathematics and computer science, implementation of mathematical concepts on computers, modeling and simulation of scientific and technical problems.

Content

The course offers the basics to advanced studies. Key concepts of the lectures are: structured program design, iteration, recursion, data structures (in particular: arrays), procedural programming with functions and methods, developing application-oriented programs. In computer labs, the mathematical concepts will be implemented.

Module Grade Calculation

grade of the written examination

Workload

lectures and exercises: 56h

homework and preparation of examination: 94h

Teaching and Learning Methods

1507 Programmieren: Einstieg in die Informatik und algorithmische Mathematik, 2V, 2LP, compulsory course

1508 Übungen zu 1507, 1Ü, 1LP, compulsory course

509 Praktikum zu 1507, 2P, 2LP, compulsory course

M**4.34 Module: Introduction to Thin Film Technology [M-CIWVT-107495]**

Coordinators: Prof. Dr.-Ing. Wilhelm Schabel
Dr. Philip Scharfer

Organisation: KIT Department of Chemical and Process Engineering

Part of: [Specialization/ Project Work](#) (Usage from 10/1/2025)

Credits	Grading	Recurrence	Duration	Language	Level	Version
12 CP	graded	Each winter term	2 terms	German	3	1

Mandatory			
T-CIWVT-114692	Introduction to Thin Film Technology - Project Work	6 CP	Schabel, Scharfer
T-CIWVT-114693	Introduction to Thin Film Technology - Exercises and Lab	6 CP	Schabel, Scharfer

Prerequisites

60 LP, at least one lab work passed.

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

Students can

- explain basic, future-oriented processes of thin film technology
- explain a process chain of a scientific question up to its answer: planning, conceptual design, implementation, execution and evaluation of fundamental experiments, describing aspects for implementation on a technical scale (scale-up)
- work scientifically using standard IT tools
- present scientific results
- independently acquire specialist knowledge

Version
2

Mandatory			
T-CIWVT-101886	Mechanical Processing	6 CP	Dittler

Assessment

The learning control is a written examination lasting 120 minutes.

Prerequisites

None

Competence Goal

Students have a basic understanding of properties & behavior of particulate systems in important engineering applications; they are able to use this understanding for calculations and design of selected processes.

Content

- Unit operations of mechanical processing - introduction and overview
- Particle size distribution - determination, depiction, conversion
- Forces on particles in flows
- Separating function - characterization of a separations process
- Fundamentals of mixing and stirring
- Introduction to dimensional analysis
- Characterizations of packings
- Capillarity in porous systems
- Flow through porous systems, fluidized bed
- Fundamentals of agglomeration
- Fundamentals of storage and conveyance

Module Grade Calculation

The module grade is the grade of the written exam.

Workload

- Attendance time: Lectures and exercises: 60 hrs
- Self-study: 45 hrs (about three hours per week)
- Preparation of examination: 75 hrs

Recommendations

Courses of 1st - 4th semester

3

Mandatory			
T-CIWVT-103448	Mechanical Separation Technology Exam	8 CP	Gleiß
T-CIWVT-103452	Mechanical Separation Technology Project Work	4 CP	Gleiß

Assessment

The learning control consists of two partial achievements:

1. An oral individual examination with a duration of about 30 minutes for the lecture "Mechanical Separation Technology" and related exercises
2. Project work. Practical collaboration, written report and oral presentation of the results are rated.

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students are able to explain the fundamental laws and the derived physical principles of the particle separation from liquids and not only to relate them to the principally suited separation apparatuses but also special variants. They have the ability to apply the relationship between product operation and design parameters to different separation techniques. They can analyse separation problems with scientific methods and give alternative problem solution proposals. The students are able to execute their fundamental and process knowledge practically to the example of beer brewing.

Content

Physical fundamentals, apparatuses, applications, strategies; characterisation of particle systems and slurries; pretreatment methods to enhance the separability of slurries; fundamentals, apparatuses and process technology of static and centrifugal sedimentation, flotation, depth filtration, crossflow filtration, cake forming vacuum and gas overpressure filtration, filter centrifuges and press filters; filter media; selection criteria and scale-up methods for separation apparatuses and machines; apparatus combinations; case studies to solve separation problems.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

Lecture 3 SWS exercises 1 SWS:

- attendance time: 60h
- self-study: 80h
- examination preparation: 80h

project work

- attendance time and self-study: 140h

M**4.37 Module: Micro Process Engineering [M-CIWVT-101154]****Coordinators:** Prof. Dr.-Ing. Peter Pfeifer**Organisation:** KIT Department of Chemical and Process Engineering**Part of:** [Specialization/](#) [Project Work](#)

Credits	Grading	Recurrence	Duration	Language	Level	Version
12 CP	graded	Each winter term	2 terms	German	4	3

Mandatory			
T-CIWVT-103666	Micro Process Engineering	7 CP	Pfeifer
T-CIWVT-103667	Micro Process Engineering	5 CP	Dittmeyer, Pfeifer

Assessment

The learning control consists of three partial achievements:

1. Oral examination of about 25 minutes duration
2. project work

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students are able apply the methods of process intensification by microstructuring of the reaction zone and are capable of analyzing the advantages and disadvantages while transferring given processes into microreactors. With knowledge of special production processes for micro reactors, students are able to design microstructured systems in terms of heat exchange and to analyze the possibilities of transferring processes from conventional technology into the microreactor with regard to heat transfer performance. They understand also how the mechanisms of mass transport and mixing interact in microstructured flow mixers, and are able to apply this knowledge to the combination of mixing and reaction. They can also analyze possible limitations in the process adaptation and are thus able to design microstructured reactors for homogeneous reactions appropriately. The students understand the significance of the residence time distribution for the conversion and selectivity and are capable of analyzing the interaction of mass transport by diffusion and hydrodynamic residence time in microstructured equipment in given applications.

Content

Basic knowledge of micro process engineering systems: fabrication of microstructured systems and interaction with processes, intensification of heat exchange and special effects by heat conduction, residence time distribution in reactors and peculiarities in microstructured systems, structured flow mixers (designs and characterization) and dimensioning of structured reactors with regard to heat and mass transfer.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

- Attendance time: Lectures and exercises 60 hrs
- Self-study: 60 hrs
- Exam preparation: 2 weeks/ 60 hrs

Assessment

The learning control consists of three partial achievements:

- Project work/ presentation and report
- Ungraded online-tests (prerequisite for oral examination)
- Individual oral examination, duration 30 minutes

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students are capable of developing energy and material balances for complex processes in process technology and to analyze processes in terms of potentials for optimization. They are able to derive suitable methods for the optimization of such processes.

The students are able to calculate the costs of major pieces of equipment and to apply estimation methods for investment costs of production plants. Together with the calculation of variable production costs they are able to analyze the profitability of a chemical process plant. Furthermore the students learn basic concepts of project management, they are enabled to work in teams and guided for independent scientific work.

Content

Introduction into the basics of process development and project management for the development of chemical processes from the lab into production scale, including the design of a chemical process, design of miniplants and scale-up into production scale. Overview over methods for the economic, technical evaluation of processes and the preparation of business concepts.

Module Grade Calculation

50 % oral examination, 50 % project work.

Additional Information

As part of the project study a visit to the IKFT and the bioliq plant at the Campus North is intended, as well as an excursion to an industrial company.

Workload

Lecture and Exercise:

Attendance time: 45 h

Self-study: 90 h

Exam preparation: 45 h

M**4.44 Module: Supplementary Studies on Science, Technology and Society [M-FORUM-106753]**

Coordinators: Dr. Christine Mielke
Christine Myglas

Organisation: General Studies. Forum Science and Society (FORUM)

Part of: **Additional Examinations** (Usage from 10/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
16 CP	graded	Each term	3 terms	German	3	1

Election Notes

Students have to self-record the achievements obtained in the Supplementary Studies on Science, Technology and Society in their study plan. FORUM (formerly ZAK) records the achievements as "non-assigned" under "ÜQ/SQ-Leistungen". Further instructions on self-recording of achievements can be found in the FAQ at <https://campus.studium.kit.edu/> and on the FORUM homepage at <https://www.forum.kit.edu/english/>. The title of the examination and the amount of credits override the modules placeholders.

If you want to use FORUM achievements for both your Interdisciplinary Qualifications and for the Supplementary Studies, please record them in the Interdisciplinary Qualifications first. You can then get in contact with the FORUM study services (stg@forum.kit.edu) to also record them in your Supplementary Studies.

In the Advanced Unit you can choose examinations from three subject areas: "About Knowledge and Science", "Science in Society" and "Science in Social Debates". It is advised to complete courses from each of the three subject areas in the Advanced Unit.

To self-record achievements in the Advanced Unit, you have to select a free placeholder partial examination first. The placeholders' title do *not* affect which achievements the placeholder can be used for!

Mandatory			
T-FORUM-113578	Lecture Series Supplementary Studies on Science, Technology and Society - Self Registration	2 CP	Mielke, Myglas
T-FORUM-113579	Basic Seminar Supplementary Studies on Science, Technology and Society - Self Registration	2 CP	Mielke, Myglas
Advanced Unit Supplementary Studies on Science, Technology and Society (Election: at least 12 credits)			
T-FORUM-113580	Elective Specialization Supplementary Studies on Science, Technology and Society / About Knowledge and Science - Self-Registration	3 CP	Mielke, Myglas
T-FORUM-113581	Elective Specialization Supplementary Studies on Science, Technology and Society / Science in Society - Self-Registration	3 CP	Mielke, Myglas
T-FORUM-113582	Elective Specialization Supplementary Studies on Science, Technology and Society / Science in Public Debates - Self Registration	3 CP	Mielke, Myglas
Mandatory			
T-FORUM-113587	Registration for Certificate Issuance - Supplementary Studies on Science, Technology and Society	0 CP	Mielke, Myglas

Assessment

The monitoring is explained in the respective partial achievement.

They are composed of:

- Protocols
- Reflection reports
- Presentations
- Preparation of a project work
- An individual term paper
- An oral examination
- A written exam

Upon successful completion of the supplementary studies, graduates receive a graded report and a certificate issued by the FORUM.

Prerequisites

The course is offered during the course of study and does not have to be completed within a defined period. Enrollment is required for all assessments of the modules in the supplementary studies.

Participation in the supplementary studies is regulated by § 3 of the statutes. KIT students register for the supplementary studies by selecting this module in the student portal and booking a performance themselves. Registration for courses, assessments, and exams is regulated by § 8 of the statutes and is usually possible shortly before the start of the semester.

The course catalog, module description (module manual), statutes (study regulations), and guidelines for creating the various written performance requirements can be downloaded from the FORUM homepage at <https://www.forum.kit.edu/begleitstudium-wtg.php>.

Registration and exam modalities**PLEASE NOTE:**

Registration on the FORUM, i.e. additionally via the module selection in the student portal, enables students to receive up-to-date information about courses or study modalities. In addition, registering on the FORUM ensures that you have proof of the credits you have earned. As it is currently (as of winter semester 24-25) not yet possible to continue additional credits acquired in the Bachelor's programme electronically in the Master's programme, we strongly advise you to digitally secure the credits you have earned by archiving the Bachelor's transcript of records yourself and by registering on FORUM.

In the event that a transcript of records of the Bachelor's certificate is no longer available - we can only assign the achievements of registered students and thus take them into account when issuing the certificate.

Competence Goal

Graduates of the Supplementary Studies on Science, Technology, and Society gain a solid foundation in understanding the interplay between science, the public, business, and politics. They develop practical skills essential for careers in media, political consulting, or research management. The program prepares them to foster innovation, influence social processes, and engage in dialogue with political and societal entities. Participants are introduced to interdisciplinary perspectives, encompassing social sciences and humanities, to enhance their understanding of science, technology, and society. The teaching objectives of this supplementary degree program include equipping participants with both subject-specific knowledge and insights from epistemological, economic, social, cultural, and psychological perspectives on scientific knowledge and its application in various sectors. Students are trained to critically assess and balance the implications of their actions at the intersection of science and society. This training prepares them for roles as students, researchers, future decision-makers, and active members of society.

Through the program, participants learn to contextualize in-depth content within broader frameworks, independently analyze and evaluate selected course materials, and communicate their findings effectively in both written and oral formats. Graduates are adept at analyzing social issues and problem areas, reflecting on them critically from a socially responsible and sustainable standpoint.

Content

The Supplementary Studies on Science, Technology and Society can be started in the 1st semester of the enrolled degree programme and is not limited in time. The wide range of courses offered by FORUM makes it possible to complete the program usually within three semesters. The supplementary studies comprises 16 or more credit points (LP). It consists of **two modules: the Basic Module (4 LP) and the Advanced Module (12 LP).**

The **basic Module** comprises the compulsory courses 'Lecture Series Supplementary Studies on Science, Technology and Society' and a basic seminar with a total of 4 LP.

The **Advanced Module** comprises courses totalling 12 LP in the humanities and social sciences subject areas 'On Knowledge and Science', 'Science in Society' and 'Science in Public Debates'. The allocation of courses to the accompanying study programme can be found on the homepage <https://www.forum.kit.edu/wtg-aktuelland> in the printed FORUM course catalogue.

The 3 thematic subject areas:

Subject area 1: About Knowledge and Science

This is about the internal perspective of science: students explore the creation of knowledge, distinguishing between scientific and non-scientific statements (e.g., beliefs, pseudo-scientific claims, ideological statements), and examining the prerequisites, goals, and methods of knowledge generation. They investigate how researchers address their own biases, analyze the structure of scientific explanatory and forecasting models in various disciplines, and learn about the mechanisms of scientific quality assurance.

After completing courses in the "Knowledge and Science" area, students can critically reflect on the ideals and realities of contemporary science. They will be able to address questions such as: How robust is scientific knowledge? What are the capabilities and limitations of predictive models? How effective is quality assurance in science, and how can it be improved? What types of questions can science answer, and what questions remain beyond its scope?

Subject area 2: Science in Society

This focuses on the interactions between science and different areas of society, such as how scientific knowledge influences social decision-making and how social demands impact scientific research. Students learn about the specific functional logics of various societal sectors and, based on this understanding, estimate where conflicts of goals and actions might arise in transfer processes—for example, between science and business, science and politics, or science and journalism. Typical questions in this subject area include: How and under what conditions does an innovation emerge from a scientific discovery? How does scientific policy advice work? How do business and politics influence science, and when is this problematic? According to which criteria do journalists incorporate scientific findings into media reporting? Where does hostility towards science originate, and how can social trust in science be strengthened?

After completing courses in the "Science in Society" area, students can understand and assess the goals and constraints of actors in different societal sectors. This equips them to adopt various perspectives of communication and action partners in transfer processes and to act competently at various social interfaces with research in their professional lives.

Subject area 3: Science in Public Debates

The courses in this subject area provide insights into current debates on major social issues such as sustainability, digitalization, artificial intelligence, gender equality, social justice, and educational opportunities. Public debates on complex challenges are often polarized, leading to oversimplifications, defamation, or ideological thinking. This can hinder effective social solution-finding processes and alienate people from the political process and from science. Debates about sustainable development are particularly affected, as they involve a wide range of scientific and technological knowledge in both problem diagnosis (e.g., loss of biodiversity, climate change, resource consumption) and solution development (e.g., nature conservation, CCS, circular economy).

By attending courses in "Science in Public Debates," students are trained in an application-oriented way to engage in factual debates—exchanging arguments, addressing their own prejudices, and handling contradictory information. They learn that factual debates can often be conducted more deeply and with more nuance than is often seen in public discourse. This training enables them to handle specific factual issues in their professional lives independently of their own biases and to be open to differentiated, fact-rich arguments.

Supplementary credits:

Additional LP (supplementary work) totalling a maximum of 12 LP can also be acquired from the complementary study programme (see statutes for the WTG complementary study programme § 7). § 4 and § 5 of the statutes remain unaffected by this. These supplementary credits are not included in the overall grade of the accompanying study programme. At the request of the participant, the supplementary work will be included in the certificate of the accompanying study programme and marked as such. Supplementary coursework is listed with the grades provided for in § 9.

Module Grade Calculation

The overall grade of the supplementary course is calculated as a credit-weighted average of the grades that were achieved in the advanced module.

Additional Information

Climate change, biodiversity crisis, antibiotic resistance, artificial intelligence, carbon capture and storage, and gene editing are just a few areas where science and technology can diagnose and address numerous social and global challenges. The extent to which scientific findings are considered in politics and society depends on various factors, such as public understanding and trust, perceived opportunities and risks, and ethical, social, or legal considerations.

To enable students to use their expertise as future decision-makers in solving social and global challenges, we aim to equip them with the skills to navigate the interfaces between science, business, and politics competently and reflectively. In the Supplementary Studies, they acquire foundational knowledge about the interactions between science, technology, and society.

They learn:

- How reliable scientific knowledge is produced,
- how social expectations and demands influence scientific research, and
- how scientific knowledge is adopted, discussed, and utilized by society.

The program integrates essential insights from psychology, philosophy, economics, social sciences, and cultural studies into these topics. After completing the supplementary studies programme, students can place the content of their specialized studies within a broader social context. This prepares them, as future decision-makers, to navigate competently and reflectively at the intersections between science and various sectors of society, such as politics, business, or journalism, and to contribute effectively to innovation processes, public debates, or political decision-making.

Workload

The workload is made up of the number of hours of the individual modules:

- Basic Module approx. 120 hours
- Advanced Module approx. 360 hours
- > Total: approx. 480 hours

In the form of supplementary services, up to approximately 360 hours of work can be added.

Recommendations

It is recommended to complete the supplementary study program in three or more semesters, beginning with the lecture series on science, technology, and society in the summer semester. Alternatively, you can start with the basic seminar in the winter semester and then attend the lecture series in the summer semester.

Courses in the Advanced Module can be taken simultaneously. It is also advised to complete courses from each of the three subject areas in the advanced unit.

Mandatory			
T-CIWVT-101885	Thermal Process Engineering	6 CP	Zeiner

Assessment

Success control is a written examination taking 120 minutes in time according to § 4 Abs. 2 SPO.

From winter term 21/22: 180 minutes.

Prerequisites

None

Competence Goal

Students can explain fundamental knowledge in the field of Thermal Separations. Emphasis is laid on the difference between methodological tools and their application for the description of selected unit operations. They can work on standard types of problems in the field of Thermal Process Engineering. They can solve it mathematically and can apply methodological tools adequately. Furthermore, the students can quantitatively apply these tools and skills to processes and problems which are new to them.

Content

The taught methodological tools are balancing of conservative quantities, thermodynamic equilibrium and their application to single- and multi-stage processes. Within this module the following unit operations are introduced: Distillation, Rectification, Absorption, Extraction, Evaporation, Crystallisation, Drying, Adsorption/Chromatography.

Module Grade Calculation

The mark of the module is equal to the mark of the written examination.

Workload

Attendance time (lecture and tutorials): 56 h

Self study: 44 h

Examination preparation: 80 h

Recommendations

Courses of 1st - 4th semester

Literature

personal prints, scientific text books

M**4.46 Module: Thermodynamics I [M-CIWVT-101129]**

Coordinators: Prof. Dr. Sabine Enders
Organisation: KIT Department of Chemical and Process Engineering
Part of: **Thermodynamics and Transport Processes**

Credits	Grading	Recurrence	Duration	Language	Level	Version
7 CP	graded	Each winter term	1 term	German	3	2

Mandatory			
T-CIWVT-101878	Thermodynamics I, Tutorial	0 CP	Enders
T-CIWVT-101879	Thermodynamics I, Exam	7 CP	Enders

Assessment

The learning control consists of two partial achievements:

1. Written examination lasting 120 min
2. Prerequisite for participation: Completed coursework;
2 of 3 compulsory exercises have to be approved

Prerequisites

Before taking the written exam, the completed coursework must be passed.

Competence Goal

Students are able to analyse and to design energy conversion processes by applying the first and second law of thermodynamics. They understand the behaviour of real pure substances, and they are able to explain thermodynamic processes with and without phase change by means of state diagrams and process schemes.

Content

Fundamental terms; thermodynamic equilibrium and temperature; properties and equation of state for ideal gases; energy and first law for closed systems; balances for open systems; entropy and thermodynamic potentials; second law; equations of state for pure component caloric properties; phase change behavior of pure component systems and state diagrams; thermodynamic cycles for power generation, refrigeration and heat pumps; exergy

Module Grade Calculation

The module grade is the grade of the written examination.

Workload

Lectures and exercises: 70 h

Homework: 80 h

Preparation of Examination : 60 h

Recommendations

courses of 1st and 2nd semester

Mandatory			
T-CIWVT-101880	Thermodynamics II, Tutorial	0 CP	Enders
T-CIWVT-101881	Thermodynamics II, Exam	7 CP	Enders

Assessment

The learning control consists of two partial achievements:

1. Written examination lasting 120 min
2. Prerequisite for participation: Completed coursework;
2 of 3 compulsory exercises have to be approved

Prerequisites

Before taking the written exam, the completed coursework must be passed.

Competence Goal

Students understand the behavior of real gases, gas-vapor mixtures, simple real mixtures, chemical equilibria of ideal gases. They are able to explain and to analyse corresponding thermodynamic processes by means of state diagrams and process schemes. They are able to analyse and to design these processes based on balance equations and phase equilibria.

Content

Real gases and liquefaction of gases; thermodynamic potentials; characterization of mixtures; mixtures of ideal gases; gas-vapor mixtures and processes with humid air; phase equilibria and phase diagrams, laws of Raoult and Henry, liquid-liquid equilibria; enthalpy of mixtures; general description of mixtures and chemical potential; reaction equilibria of ideal gases; fundamentals of combustion processes.

Module Grade Calculation

The module grade is the grade of the written examination.

Workload

Lectures and exercises: 70 h

Homework: 80 h

Preparation of Examination : 60 h

Recommendations

courses of 1st - 3rd semester

Self Service Assignment of Supplementary Studies

This module component can be used for self service assignment of grades acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendations

It is recommended that the basic seminar be completed during the same semester as the lecture series "Science in Society". If it is not possible to attend the lecture series and the basic seminar in the same semester, the basic seminar can also be attended in the semesters before the lecture series.

However, attending courses in the advanced unit before attending the basic seminar should be avoided.

Type	Credits	Grading	Term offered	Version
Examination of another type	3 CP	graded	Each term	1

Assessment

Another type of examination assessment under § 5, section 3 involves a presentation, term paper, or project work within the chosen course.

Prerequisites

None

Self Service Assignment of Supplementary Studies

This module component can be used for self service assignment of grades acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendations

The contents of the basic module are helpful. The basic module should be completed or attended in parallel, but not after the advanced module.

The reading recommendations for primary and specialist literature are determined individually by the respective lecturers according to the subject area and course.

Additional Information

This placeholder can be used for any achievement in the Advanced Unit of the Supplementary Studies.

In the Advanced Module, students can choose their own individual focus, e.g. sustainable development, data literacy, etc. The focus should be discussed with the module coordinator at the FORUM.

Part of: [M-FORUM-106753 - Supplementary Studies on Science, Technology and Society](#)

Type	Credits	Grading	Term offered	Expansion	Version
Coursework	2 CP	pass/fail	Each summer term	1 semesters	1

Assessment

Active participation, learning protocols, if applicable.

Prerequisites

None

Self Service Assignment of Supplementary Studies

This module component can be used for self service assignment of grades acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendations

It is recommended that you complete the lecture series "Science in Society" before attending events in the advanced module and in parallel with attending the basic seminar.

If it is not possible to attend the lecture series and the basic seminar in the same semester, the lecture series can also be attended after attending the basic seminar.

However, attending events in the advanced module before attending the lecture series should be avoided.

Additional Information

The basic module consists of the lecture series "Science in Society" and the basic seminar. The lecture series is only offered during the summer semester.

The basic seminar can be attended in the summer or winter semester.
