

Module Handbook Bioengineering Bachelor 2023 (Bachelor of Science (B.Sc.))

SPO 2023

Winter semester 2026/27

Date: 19/08/2026

KIT DEPARTMENT OF CHEMICAL AND PROCESS ENGINEERING

Table Of Contents

1. General Information	6
1.1. Study program details	6
1.2. Qualification Goals	6
1.3. Studies and Examination Regulations	6
1.4. Organizational issues	7
2. Curriculum	8
3. Study Program Structure.....	11
3.1. Orientation Exam	11
3.2. Bachelor's Thesis	12
3.3. Fundamentals of Mathematics and Natural Sciences	12
3.4. Fundamentals of Scientific Engineering	13
3.5. Fundamentals of Process Engineering	13
3.6. Specialization/ Process Engineering	14
3.7. Specialization/ Project Work	15
3.8. Interdisciplinary Qualifications	16
3.9. Additional Examinations	16
3.10. Master's Transfer Account	17
4. Modules.....	18
4.1. Automation and Control Systems Engineering - M-CIWVT-106477	18
4.2. Advanced Mathematics I - M-MATH-100280	19
4.3. Advanced Mathematics II - M-MATH-100281	20
4.4. Advanced Mathematics III - M-MATH-100282	21
4.5. Advanced Methods in Linear Control - M-CIWVT-106880	22
4.6. Air Pollution Control - M-CIWVT-106448	23
4.7. Applied Apparatus Engineering - M-CIWVT-103297	24
4.8. Applied Thermal Process Engineering - M-CIWVT-104458	25
4.9. Bachelor's Thesis - M-CIWVT-106580	27
4.10. Basic Practical Course in Natural Sciences - M-CIWVT-106427	28
4.11. Biology for Engineers - M-CIWVT-106414	29
4.12. Biopharmaceutical Process Engineering - M-CIWVT-106475	31
4.13. Biopharmaceutical Process Engineering - M-CIWVT-106437	32
4.14. Bioprocess Development - M-CIWVT-107403	33
4.15. Bioprocess Development - M-CIWVT-107406	35
4.16. Bioprocess Engineering - M-CIWVT-106434	38
4.17. Biotechnology - M-CIWVT-101143	40
4.18. Chemical Process Engineering - M-CIWVT-101133	42
4.19. Chemical Reaction Engineering - M-CIWVT-106825	43
4.20. Circular Economy - M-CIWVT-105995	44
4.21. Control Engineering and System Dynamics - M-CIWVT-106308	45
4.22. Data Analysis - M-CIWVT-106432	46
4.23. Design of Machines - M-CIWVT-101941	47
4.24. Electrochemical Energy Technologies and Materials - M-CIWVT-107651	48
4.25. Energy and Environmental Engineering - M-CIWVT-101145	50
4.26. Energy Process Engineering - M-CIWVT-101136	51
4.27. Engineering Mechanics: Dynamics - M-CIWVT-101128	53
4.28. Engineering Mechanics: Statics - M-CIWVT-105846	54
4.29. Fluidynamics - M-CIWVT-101131	55
4.30. Food Bioprocess Engineering - M-CIWVT-106476	56
4.31. Food Bioprocess Engineering - M-CIWVT-106436	57
4.32. Food Technology - M-CIWVT-101148	59
4.33. Formulation and Characterisation of Energy Materials - M-CIWVT-106700	60
4.34. Fundamentals of Refrigeration - M-CIWVT-104457	61
4.35. Further Examinations - M-CIWVT-102017	63
4.36. General Chemistry and Chemistry of Aqueous Solutions - M-CIWVT-106431	64
4.37. Heat and Mass Transfer - M-CIWVT-107675	65
4.38. Industrial Organic Chemistry - M-CIWVT-101137	66
4.39. Intensification of Bioprocesses - M-CIWVT-106444	67
4.40. Intensification of Bioprocesses - M-CIWVT-106416	69
4.41. Introduction into Bioengineering - M-CIWVT-106433	71

4.42. Introduction to Thin Film Technology - M-CIWVT-107495	72
4.43. Laboratory Course: Electrochemical Energy Technologies - M-ETIT-105703	73
4.44. Mathematical Modeling for Biochemical Engineering - M-MATH-106443	74
4.45. Mechanical Processing - M-CIWVT-101135	75
4.46. Mechanical Separation Technology - M-CIWVT-101147	76
4.47. Medical Imaging Technology - M-ETIT-106778	77
4.48. Mentoring - Group Management - M-CIWVT-108007	78
4.49. Micro Process Engineering - M-CIWVT-101154	79
4.50. Organic Chemistry for Engineers - M-CHEMBIO-101115	81
4.51. Orientation Exam - M-CIWVT-106447	82
4.52. Physiology and Anatomy for Biomedical Engineering - M-ETIT-105874	83
4.53. Process Development and Scale-up - M-CIWVT-101153	86
4.54. Process Engineering in Excel - M-CIWVT-107654	88
4.55. Programming and Numeric Simulation - M-CIWVT-106438	89
4.56. Scientific Writing with LaTeX - M-HOC-106502	90
4.57. Single Results - M-CIWVT-101991	91
4.58. Supplementary Studies on Science, Technology and Society - M-FORUM-106753	92
4.59. Thermal Process Engineering - M-CIWVT-101134	96
4.60. Thermodynamics I - M-CIWVT-101129	97
4.61. Thermodynamics II - M-CIWVT-101130	98
5. Module components	99
5.1. Automation and Control Systems Engineering - Exam - T-CIWVT-113088	99
5.2. Advanced Mathematics I - T-MATH-100275	100
5.3. Advanced Mathematics II - T-MATH-100276	101
5.4. Advanced Mathematics III - T-MATH-100277	102
5.5. Air Pollution Control - T-CIWVT-113046	103
5.6. Air Pollution Control - Project Work - T-CIWVT-113047	104
5.7. Applied Apparatus Engineering - T-CIWVT-106562	105
5.8. Applied Thermal Process Engineering - Exercises - T-CIWVT-110803	106
5.9. Applied Thermal Process Engineering - Project Work - T-CIWVT-109120	107
5.10. Automation and Control Systems Engineering - Project Work - T-CIWVT-113089	108
5.11. Bachelor's Thesis - T-CIWVT-113255	109
5.12. Basic Seminar Supplementary Studies on Science, Technology and Society - Self Registration - T-FORUM-113579	110
5.13. Biochemistry - T-CIWVT-112997	111
5.14. Biopharmaceutical Process Engineering - T-CIWVT-113023	112
5.15. Biopharmaceutical Purification Processes - T-CIWVT-106029	113
5.16. Bioprocess Development - T-CIWVT-114538	114
5.17. Bioprocess Engineering - T-CIWVT-113019	115
5.18. Biotechnology - T-CIWVT-103669	116
5.19. Biotechnology - T-CIWVT-103668	117
5.20. Cell Biology - T-CIWVT-113037	118
5.21. Chemical Process Engineering - T-CIWVT-101884	119
5.22. Chemical Reaction Engineering - Exam - T-CIWVT-113695	120
5.23. Chemical Reaction Engineering - Project Work - T-CIWVT-113696	121
5.24. Circular Economy - Oral Exam - T-CIWVT-112172	122
5.25. Circular Economy - Project Work - T-CIWVT-112173	123
5.26. Computational Fluid Dynamics - T-CIWVT-106035	124
5.27. Control Engineering and System Dynamics - T-CIWVT-112787	125
5.28. Data Analysis - T-CIWVT-113039	126
5.29. Design of Machines - T-CIWVT-103641	127
5.30. Design of Machines, Exam - T-CIWVT-103642	128
5.31. Elective Specialization Supplementary Studies on Science, Technology and Society / About Knowledge and Science - Self-Registration - T-FORUM-113580	129
5.32. Elective Specialization Supplementary Studies on Science, Technology and Society / Science in Public Debates - Self Registration - T-FORUM-113582	130
5.33. Elective Specialization Supplementary Studies on Science, Technology and Society / Science in Society - Self-Registration - T-FORUM-113581	131
5.34. Electrochemical Energy Technologies - T-ETIT-114245	132
5.35. Energy and Environmental Engineering - T-CIWVT-108254	133
5.36. Energy and Environmental Engineering Project Work - T-CIWVT-103527	134
5.37. Energy Process Engineering - T-CIWVT-101889	135
5.38. Engineering Mechanics: Dynamics - T-CIWVT-106290	136

5.39. Engineering Mechanics: Dynamics, Exam - T-CIWVT-101877	137
5.40. Engineering Mechanics: Statics - T-CIWVT-111054	138
5.41. Exercises Process Development and Scale-up - T-CIWVT-111005	139
5.42. Exercises: Membrane Technologies - T-CIWVT-113235	140
5.43. Fluidynamics, Exam - T-CIWVT-101882	141
5.44. Fluidynamics, Tutorial - T-CIWVT-101904	142
5.45. Food Bioprocess Engineering - T-CIWVT-113021	143
5.46. Food Bioprocess Engineering Lab - T-CIWVT-113022	144
5.47. Food Technology - T-CIWVT-103528	145
5.48. Food Technology Project Work - T-CIWVT-103529	146
5.49. Formulation and Characterisation of Energy Materials - Exam - T-CIWVT-113478	147
5.50. Formulation and Characterisation of Energy Materials - Project Work - T-CIWVT-113479	148
5.51. Fundamentals of Refrigeration, Oral Examination - T-CIWVT-109117	149
5.52. Fundamentals of Refrigeration, Project Work - T-CIWVT-109118	150
5.53. General Chemistry and Chemistry of Aqueous Solutions - T-CIWVT-101892	151
5.54. Genetics - T-CIWVT-111063	152
5.55. Heat and Mass Transfer - T-CIWVT-115040	153
5.56. Industrial Organic Chemistry - T-CIWVT-101890	154
5.57. Intensification of Bioprocesses - Written Exam - T-CIWVT-112998	155
5.58. Intensification of Bioprocesses - Lab - T-CIWVT-112999	156
5.59. Internship - T-CIWVT-106036	157
5.60. Introduction into Bioengineering - T-CIWVT-113018	158
5.61. Introduction to Thin Film Technology - Exercises and Lab - T-CIWVT-114693	159
5.62. Introduction to Thin Film Technology - Project Work - T-CIWVT-114692	160
5.63. Kinetics and Catalysis - T-CIWVT-106032	161
5.64. Laboratory Course: Electrochemical Energy Technologies - T-ETIT-111376	162
5.65. Laboratory Work: Bioprocess Development - T-CIWVT-114542	163
5.66. Laboratory Work: Downstream Processing - T-CIWVT-113024	164
5.67. Laboratory Work: General Chemistry - T-CIWVT-115300	165
5.68. Laboratory Work: Microbiology for Engineers - T-CIWVT-115301	166
5.69. Lecture Series Supplementary Studies on Science, Technology and Society - Self Registration - T-FORUM-113578	167
5.70. Mathematical Modeling for Biochemical Engineering - T-MATH-113040	168
5.71. Mechanical Processing - T-CIWVT-101886	169
5.72. Mechanical Separation Technology Exam - T-CIWVT-103448	170
5.73. Mechanical Separation Technology Project Work - T-CIWVT-103452	171
5.74. Medical Imaging Technology - T-ETIT-113625	172
5.75. Membrane Technologies in Water Treatment - T-CIWVT-113236	173
5.76. Mentoring - Group Management - T-CIWVT-115475	174
5.77. Micro Process Engineering - T-CIWVT-103666	175
5.78. Micro Process Engineering - T-CIWVT-103667	176
5.79. Microbiology - T-CIWVT-113038	177
5.80. Organic Chemistry for Engineers - T-CHEMBIO-101865	178
5.81. Particle Technology Exam - T-CIWVT-106028	179
5.82. Physiology and Anatomy for Biomedical Engineering - T-ETIT-111815	180
5.83. Practical: Synthesis of Electrochemical Materials - T-CIWVT-114998	181
5.84. Process and Plant Design in Biotechnology - Seminar - T-CIWVT-114498	182
5.85. Process and Plant Design in Biotechnology - Written Exam - T-CIWVT-114499	183
5.86. Process Development and Scale-up - T-CIWVT-103530	184
5.87. Process Development and Scale-up Project Work - T-CIWVT-103556	185
5.88. Process Engineering in Excel - T-CIWVT-115002	186
5.89. Programming and Numeric Simulation - T-CIWVT-113025	187
5.90. Programming and Numeric Simulation Using MATLAB - Exercises - T-CIWVT-113074	188
5.91. Registration for Certificate Issuance - Supplementary Studies on Science, Technology and Society - T-FORUM-113587	189
5.92. Scientific Writing with LaTeX - T-HOC-113121	190
5.93. Thermal Process Engineering - T-CIWVT-101885	191
5.94. Thermal Process Engineering II - T-CIWVT-114107	192
5.95. Thermodynamics for Bioengineering - T-CIWVT-114497	193
5.96. Thermodynamics I, Exam - T-CIWVT-101879	194
5.97. Thermodynamics I, Tutorial - T-CIWVT-101878	195
5.98. Thermodynamics II, Exam - T-CIWVT-101881	196
5.99. Thermodynamics II, Tutorial - T-CIWVT-101880	197

5.100. Tutorial Advanced Mathematics I - T-MATH-100525	198
5.101. Tutorial Advanced Mathematics II - T-MATH-100526	199
5.102. Tutorial Advanced Mathematics III - T-MATH-100527	200

1 General Information

1.1 Study program details

KIT-Department	KIT Department of Chemical and Process Engineering
Academic Degree	Bachelor of Science (B.Sc.)
Examination Regulations Version	2023
Regular semesters	6 semesters
Maximum semesters	12 semesters
Credits	180
Language	German
Grade calculation	Weighted by (Weight * CP)
Additional Information	Link to study program www.ciw.kit.edu Department https://www.ciw.kit.edu/1628.php Business unit Studium und Lehre https://www.sle.kit.edu/vorstudium/bachelor-bioingenieurwesen.php

1.2 Qualification Goals

The focus of bioengineering is on process engineering in the context of an industrial, engineering-driven application of biological and biotechnological principles. In this way, bioengineering differs from natural sciences programs, biotechnology or molecular biotechnology, which deal primarily with the utilization of biological principles. Bioengineers make a crucial contribution to the development of interdisciplinary approaches for creating an energetically and materially sustainable, post-fossil economy.

The Bachelor's program provides knowledge on scientific fundamentals and methodical expertise in the area of bioengineering. The Bachelor's degree will qualify students to apply the acquired theoretical knowledge to a specific professional field. Furthermore, students will gain the knowledge and skills that are necessary to complete a Master's program successfully.

The compulsory program in the first and second year focuses on methodical and qualified fundamental knowledge of mathematics, natural sciences, biotechnology and engineering. The main focus is on process engineering of biological material systems, reactions and processes in theory (basic lectures) and practice (introductory laboratory courses).

The knowledge acquired in the first and second year is not only the basis for the third year of the Bachelor's program, but also for the following Master's studies. Mandatory elective courses in the third year of study offer the opportunity to gain in-depth knowledge in a specialist area for the first time. These mandatory elective courses comprise technological aspects and a practical project work (group work). Within their Bachelor's thesis, students prove the ability of working on specialized problems independently and within a defined time frame using scientific methods.

Graduates are qualified to identify, abstract, and solve technical problems using the basic knowledge provided during the Bachelor's program. Furthermore, they can evaluate biotechnological products and processes systematically as well as select and apply analyzing and simulation tools. They are able to combine theory and practice as well as to organize and implement projects independently. Graduates are able to collaborate with experts in other fields.

1.3 Studies and Examination Regulations

The legal basis for the study program and the examinations is the

Studien- und Prüfungsordnung des Karlsruher Instituts für Technologie (KIT) für den Bachelorstudiengang Bioingenieurwesen

(Study and Examination Regulations of the Karlsruhe Institute of Technology (KIT) for the Bachelor Course of Studies in Chemical and Process Engineering)

of 27 April 2023.

https://www.sle.kit.edu/downloads/AmtlicheBekanntmachungen/2023_AB_043.pdf

1.4 Organizational issues

General Information

Current information on degree programs and dates for information sessions can be found on the faculty web pages. <https://www.ciw.kit.edu/english/4102.php>

Exam dates can be found on the following web page:
<https://www.ciw.kit.edu/english/3338.php>

Recognition of achievements according to § 19 SPO

A request for recognition of achievements which are completed

- At another university
- Abroad
- Outside the higher education system

can be submitted to the Bachelor Examination Board within one semester. There, if necessary after consultation with the subject representative, it will be determined whether the achievement is equivalent to an achievement in the curriculum of the course of study and can be recognised. Achievements completed as part of a semester abroad can also be recognized at a later date.

For forms, please refer to the website of the KIT Faculty of Chemical and Process Engineering <https://www.ciw.kit.edu/bpa.php>

2 Curriculum Bachelor Bioengineering

2.1 Semester overview

Semester CP	Fundamentals of Mathematics and Natural Sciences	Fundamentals of Scientific Engineering	Fundamentals of Process Engineering	Specialization/ Process Engineering	Specialization/ Project Work; Interdisciplinary Qualification; Thesis
1 27	Advanced Mathematics I (7) General Chemistry and Chemistry of Aqueous Solutions (6) Biology für Engineers (7) - Cell Biology - Biochemistry - Genetics Basic Practical Course (2) - General Chemistry	Engineering Mechanics: Statics (5)			
2 33	Advanced Mathematics II (7) Mathematical Modeling for Biochemical Engineering (4) Organic Chemistry (5) Biology für Engineers (2) - Microbiology	Design of Machines (7)	Introduction into Bioengineering (5)		Programming and Numeric Simulation Using MATLAB (3)
3 31	Advanced Mathematics III (7) Data Analysis (3) Basic Practical Course (2) - Mikrobiologie	Engineering Mechanics: Dynamics (5) Thermodynamics I (7)	Bioprocess Engineering (5)		Scientific Writing with LaTeX (2)
4 33		Thermodynamics II (7) Heat and Mass Transfer (7) Fluid Dynamics (5) Control Engineering and System Dynamics (5)		Elective Module Bioprocess Engineering (including lab) I (9)	
5 28			Unit Operations: Two modules (2 X 6)	Elective Module Bioprocess Engineering (including lab) (9) Elective Module Process Engineering I (5)	Specialization/ Project Work (2)
6 28				Elective Module Process Engineering II (5)	Specialization/ Project Work (10) Interdisciplinary Qualification (1) Thesis (12)

Numbers in brackets: Credits Points (CP)

Elective Module Bioprocess Engineering I and II: Lecture/ written exam (6 LP), lab one week (3 LP), the following modules can be chosen:

- Intensification of Bioprocesses
- Food Bioprocess Engineering
- Biopharmaceutical Process Engineering
- Microsystems in Bioprocess Engineering

2.2 Overview: Fields and Modules

Area	Module	Responsible	SWS	CP
Fundamentals of Mathematics and Natural Sciences 52 CP	Advanced Mathematics I	Griesmaier	6	7
	Advanced Mathematics II	Griesmaier	6	7
	Advanced Mathematics III	Griesmaier	6	7
	Mathematical Modeling for Biochemical Engineering	Thäter	2	4
	Data Analysis	Guthausen	2	3
	General Chemistry/ Chemistry of Aq. Solutions	Horn	5	6
	Organic Chemistry	Meier	4	5
	Biology for Engineers	Holtmann	8	9
	Basic Practical Course	West, Neumann	2	4
Fundamentals of Scientific Engineering 48 CP	Engineering Mechanics: Statics	Willenbacher	4	5
	Engineering Mechanics: Dynamics	Klahn	4	5
	Design of Machines	Gleiß	6	7
	Control Engineering and System Dynamics	Meurer	4	5
	Thermodynamics I	Enders	5	7
	Thermodynamics II	Enders	5	7
	Fluidynamics	Nirschl	4	5
	Heat and Mass Transfer	Wetzel	5	7
Fundamentals of Process Engineering 22 LP	Introduction into Bioengineering	Grünberger, Holtmann, Hubbuch, Leister	4	5
	Bioprocess Engineering		4	5
	Two of the following modules:			
	- Mechanical Processing	Dittler	4	6
	- Thermal Process Engineering	Zeiner	4	6
	- Chemical Process Engineering	Wehinger	4	6
Specialization/ Process Engineering 28 LP	Elective Module Bioprocess Engineering I		4 + P	9
	Elective Module Bioprocess Engineering II		4 + P	9
	Elective Module Process Engineering I		4	5 (6)
	Elective Module Process Engineering I		4	5 (4)
Interdisciplinary Qualification 6 LP	Programming and Numeric Simulation	Jerono	2	3
	Scientific Writing with LaTeX			2
	Elective module			1
Specialization/ Project Work 12 LP	1 module			12
12 LP	Thesis			12
Total				180

CP: Credit Points (ECTS), SWS: weekly teaching hours

2.3 Lectures/ Exercises/ Laboratories/ exams

(Semester Overview, Attendance Timehours per week)

	1. Semester (WS)					2. Semester (SS)

3.1 Orientation Exam

ID	Name	Language	Term offered	Credits
Mandatory				
M-CIWVT-106447	Orientation Exam	DE	WT+ST	0 CP

3.2 Bachelor's Thesis

Credits
12

Prerequisite:

The Bachelor thesis may only be started when the requirements (at least 120 LP) have been fulfilled.

Procedure for registering the Bachelor's thesis

Registration for the Bachelor's thesis is handled by the Bachelor Examination Board:

- Registration before starting the thesis
- If possible, send documents to the Bachelor Examination Board via the Institute Secretariat.
- The Bachelor Examination Board requires the following documents no later than four weeks after the start of the work
 - Admission certificate <https://www.ciw.kit.edu/1838.php> filled out and signed
 - Copy of the assignment (signed by the person submitting the assignment)
- The Bachelor Examination Board will record and register the Bachelor thesis in the campus management system. The deadline for submission is also recorded by the Bachelor Examination Board.

Submission of the Bachelor's thesis:

- The maximum processing time is four months. The submission deadline is recorded in the campus management system. The thesis must be handed in within the deadline.
- When submitting the Bachelor's thesis, students must declare that they have written the thesis independently and have not used any sources or aids other than those specified. The exact wording can be found in the study and examination regulations.
 - pdf-File, upload
 - Handing in at the supervisor after consultation
- The date of submission is the date of upload.

3.7 Specialization/ Project Work

Credits
12

In the fifth semester the possibility of profile building exists for the first time. Eleven specialization subjects are available. The size and structure of these specialization subjects are similar. All specialization subjects extend over two semesters, start in the winter semester and end at the end of May at the latest. In the winter semester, lectures usually take place in which extended, subject-specific knowledge is imparted. Subsequently, research-related project work is carried out in small groups. Prerequisites for participation in the profile subjects are at least 60 ECTS and at least one successfully completed internship (e.g. general and inorganic chemistry, process engineering,...).

The learning control of specialization subjects consists of two parts which are listed in the description of the module description (e.g. oral examination and presentation of the project work). The specialization subject is only passed if both partial examinations are passed (evaluated with at least "sufficient"). A failed partial performance can only be repeated once. Dates for repeat exams will be agreed with the person responsible for the subject.

As the practical work is carried out in the laboratory, the number of participants in the individual specialization subjects is limited. The registration for the specialization subjects is usually possible in June or July. Within a registration period of two weeks, students have the opportunity to choose their preferred subject (at least one first and one second wish). After the registration deadline, the places will be allocated automatically, taking into account your wishes as far as possible.

Before the start of the registration period, an information event will be held in which the individual subjects will be presented and the registration procedure explained.

3.8 Interdisciplinary Qualifications

Credits
6

A total of 6 LPs must be completed in the area of "soft skill qualifications" during the Bachelor's programme. Non-technical modules, such as modules from other subject areas, language courses or other courses offered by the House of Competence (HoC) or the Centre for Applied Cultural Studies and General Studies (ZaK), belong to interdisciplinary qualifications.

Registration in the Campusmanagement System

Additional credits and interdisciplinary qualifications cannot always be registered directly in the CAS system (e.g. some modules from another faculty). In any case, you must contact Julia Hofer before the examination.

Exception:

interdisciplinary qualification at the House of Competence (HoC) or Language Centre

If the Soft Skill Qualification is taken at the HoC or Language Centre, then no certificate of approval is required for an examination achievement, as the achievements are automatically posted in the CAS system under "unallocated credits".

If you want to credit a performance that is listed under "unallocated credits", you have to submit a form to the Masters Examination Board.

For forms, please refer to the website of the KIT Faculty of Chemical and Process Engineering <https://www.ciw.kit.edu/bpa.php>

3.10 Master's Transfer Account

Students who have already earned at least 120 LP in their Bachelor's programme can earn credit points from a consecutive Master's programme at KIT up to a maximum of 30 LP.

Exams can be taken in the following subjects:

- Advanced Fundamentals
- Internship
- Soft Skill Qualifications

Further information on individual modules can be found in the module manual of the Master's program.

Within the first Master's semester, achievements can be taken over into the master program. Please contact the Master's Examination Board.

There is no obligation to transfer achievements from Master Transfer Account!

Election notes

Please note: Upon successful completion of all studies and exams needed for the bachelor's degree, a control of success registered as a prior master's examination may only be passed as long as you are enrolled in the bachelor's program. You should not yet have been admitted to the master's program and the master's semester should not yet have started.

This means that as soon as your admission to the master's program has been expressed and the master's semester has started, your participation in the examination is the **first regular examination** attempt within the framework of your master's studies.

T-MATH-100525	Tutorial Advanced Mathematics I <i>This item will not influence the grade calculation of this parent.</i>	WT	0 CP	Arens, Griesmaier, Hettlich

Assessment

Learning assessment is carried out through an ungraded coursework assignments and a written examination lasting 120 minutes. Successful completion of the "Exercises in Advanced Mathematics I" coursework is a prerequisite for admission to the written exam.

Prerequisites

none

Competence Goal

The students know the fundamentals of one-dimensional calculus. They can reliably use limits, functions, power series and integrals. They understand central concepts such as continuity, differentiability or integrability and they know important statements about these concepts. The students can follow the arguments leading to these statements as presented in the lectures and are able to independently prove simple assertions based on these statements.

Content

Fundamentals, sequences and convergence, functions and continuity, series, differential calculus of one real variable, integral calculus

Module Grade Calculation

The module grade is the grade of the written examination

Workload**In class: 90 hours**

- lectures, tutorials and examinations

Independent study: 120 hours

- independent review of course material
- work on homework assignments
- preparation for written exams

Literature

will be announced in class.

Assessment

Learning assessment is carried out through an ungraded coursework assignments and a written examination lasting 120 minutes. Successful completion of the "Exercises in Advanced Mathematics II" coursework is a prerequisite for admission to the written exam.

Prerequisites

none

Competence Goal

The students know about the fundamentals of linear algebra. They are able to use vectors, linear maps and matrices without problems. They have basic knowledge about Fourier series. The students also can theoretically and practically deal with initial value problems of ordinary differential equations. They can make use of classical solution techniques for linear differential equations.

Content

vector spaces, linear maps, eigenvalues, Fourier series, differential equations, Laplace transform

Module Grade Calculation

The module grade is the grade of the written examination.

Workload

In class: 90 hours

- lectures, tutorials and examinations

Independent study: 120 hours

Assessment

Learning assessment is carried out through an ungraded coursework assignments and a written examination lasting 120 minutes. Successful completion of the "Exercises in Advanced Mathematics III" coursework is a prerequisite for admission to the written exam.

Prerequisites

none

Competence Goal

The students know about differential calculus for vector-valued functions of several variables and about techniques of vector calculus such as the definition and application of differential operators, the computation of domain, line and surface integrals and important integral theorems. They have basic knowledge about partial differential equations and know basic facts from stochastics.

Content

Multidimensional calculus, domain integrals, vector calculus, partial differential equations, stochastics.

Module Grade Calculation

The module grade is the grade of the written examination.

Workload

In class: 90 hours

- lectures, tutorials and examinations

Independent study: 120 hours

- independent review of course material
- work on homework assignments
- preparation for written exams

Recommendations

The following modules should have been taken before: Advanced Mathematics I and II

Literature

will be announced in class.

M**4.5 Module: Advanced Methods in Linear Control [M-CIWVT-106880]****Coordinators:** Prof. Dr.-Ing. T-CIWVT-113046	Air Pollution Control	ST	7 CP	Dittler
T-CIWVT-113047	Air Pollution Control - Project Work		5 CP	Dittler

Assessment

The learning control consists of two partial achievements:

1. oral examination, duration 30 minutes
2. project work

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

Students understand transport behavior and methods of size distribution measurement of airborne fine particles in the context of environmental and nanotechnology. They are able to apply this knowledge to solve basic problems of particle technology in a team oriented approach.

Content

The classes provide a knowledge base of methods of particle dispersion, particle transport processes in gases, as well as methods for their characterization with applications in the environment and industrial product design. Practical experience related to these concepts is developed in a team based lab project.

Module Grade Calculation

The module grade is calculated from the grades of the two partial achievements:
 40 % project work, 60 % oral examination.

Workload

- Attendance time: 56 h (V+Ü) + 120 (project work) + 10 (Excursion)
- Self-Study: 24 h
- Oral examination: 140 h

T-CIWVT-106562	Applied Apparatus Engineering	ST	5 CP	Neuberger

Assessment

Success Control is an written examination of 90 minutes duration according to § 4 Abs. 2 Nr. 1 SPO.

Prerequisites

None

Competence Goal

The students will be able to describe the necessary steps for concept, planning and calculation of a construction of a machine until the commissioning. This contains the choice and declaration of single components. The students will apply the principles of the machine design with respect to the requirements for different educts, products and processes.

Additionally to technical aspects, the students will learn about cost management, time management and quality management. The students will know the sequence of licensing and providing procedures.

Content

Project Management

Project time management, project cost management, work breakdown structure

Process of Machine Design

Product (requirements with respect to corrosion, purity, cleanness ...), process (manufacturing, pressure, temperature, ...), selection of materials and components (motors, pumps, vans, fittings), maintenance, repair, safety, manufacturing process (welding, brazing ...), transport, commissioning, performance test, approval ...

Procurement

Technical specification, call for tenders, contract design, claim management

Quality Management

Certification concerning ISO 9001:2015, quality planning, quality approval

e.g. welding process qualification, qualified welders ...

material qualification report, control of manufacturing and mounting, commissioning

Workload

Attendance time: 60 h

Self-study: 45 h

Exam preparation: 45 h

Mandatory				
T-CIWVT-109120	Applied Thermal Process Engineering - Project Work	ST	6 CP	Dietrich
T-CIWVT-110803	Applied Thermal Process Engineering - Exercises	WT	6 CP	Dietrich

Assessment

The learning control consists of two module components:

- Exercises and lab (winter semester)
- Project work and presentation (summer semester)

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

Students can

- explain basic, future-oriented processes of applied thermal process engineering
- process chain of a scientific question up to its answer: planning, conceptual design, implementation, execution and evaluation of fundamental experiments, describing aspects for implementation on a technical scale (scale-up)
- work scientifically using standard IT tools
- present scientific results
- independently acquire specialist knowledge

Content

Within the scope of this module an insight into the current research of the institute is to be made possible, which deals with future-oriented topics, such as renewable energy concepts, electromobility and energy storage. Three basic experiments in the fields of drying, heat transfer and crystallization are offered in the form of a project work.

First, the corresponding technical and methodological fundamentals are presented in a lecture. This also includes the transfer of necessary knowledge for the preparation of a scientific report or a scientific presentation as well as the use of special Excel tools such as solvers or macros. In special workshops at the TVT the lecture contents can be trained. Subsequently, experiments are carried out in the laboratory using modern, partly self-assembled measuring technology (e.g. temperature sensors based on single board computers / Arduino) on the respective topic. The evaluation is carried out using the basics laid down in the lecture and with the aid of corresponding chapters of the VDI heat atlas. The results are summarized in a work report. In the following step, a design calculation for the industrial scale-up with corresponding specifications of the required devices is prepared for one of the basic experiments. The design achieved is to be presented to the other students of the profile subject in a scientific seminar. The practical part is rounded off by an excursion to BASF in Ludwigshafen, which provides insights into the application of what has been learned in industrial implementation.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

Lectures and exercises: 100 h

Homework: 160 h

Laboratory work (incl. interpretation and report): 100 h

Recommendations

The successful participation in the lecture "Basics of Heat and Mass Transfer" of the TVT is an advantage.

T-CIWVT-113038	Microbiology	ST	2,5 CP	Neumann

Assessment

The module is successfully completed by

- a written exam "Cell Biology" of 90 min
- a written exam "Genetics" of 90 min
- a written exam "Biochemistry" of 90 min
- a written exam "Microbiology" of 90 min

Prerequisites

None

Competence Goal

Cell-biology: Identification of pro- and eukaryotic cells, identification of pro- and eukaryotic cellular constituents, knowledge of basic metabolic pathways, knowledge of the most important molecule classes and their occurrence, ability to operate a light microscope and knowledge of the underlying theory, being able to select bioreactors according to the application.

Genetics: Students are able to give a detailed description of basic aspects of molecular genetics in pro- and eukaryotes and can explain genetic processes in their own words. Basic aspects are in particular: Structure and organization of nucleic acids, mechanisms of replication, transcription, translation, regulation of gene expression, recombination, transposition, DNA repair mechanisms and genetic basics of virology. Furthermore, students are able to apply their basic knowledge by explaining graphics or by transferring their knowledge to gene technological methods.

Biochemistry: Students will be able to describe the different groups of biomolecules. In addition to the importance of water for cell metabolism and the basics of bioenergetics, they can explain the structure of carbohydrates, lipids, amino acids, peptides, proteins and nucleic acids and their importance for the living cell. You will be able to describe in detail anabolism and catabolism in primary metabolism including the basic regulatory principles. They can interpret the sequences of biochemical processes also from an energetic point of view. They can explain photosynthesis. You will be able to clarify the basic processes of protein biosynthesis.

Microbiology: Students will be able to describe the subfields of microbiology. They can explain the structure and morphology of prokaryotic and eukaryotic microorganisms and their classification in the phylogenetic system. They can describe microbial primary metabolism and explain the differences between aerobic and anaerobic respiration and fermentation processes. They will be able to clarify lithotrophy and the utilization of inorganic electron donors. They can explain the role of microorganisms in the environment and global material cycles. They can interpret the sequences of microbial processes in biotechnology.

Content

Cell biology: Microscopy; Cell structure of pro- and eukaryotes; Eukaryotic cell compartments; Structure and function of macromolecules; Communication between cells; Cell cycle.

Genetics: Nucleic acids; Chromatin and chromosomes; Genes and genomes; Replication; Transcription; Translation; Recombination; Mutations and DNA repair mechanisms; Gene regulation; Methods and applications of molecular gene technology.

Biochemistry: structure and function of biomolecules; Introduction to primary metabolism; Bioenergetics & regulatory principles; Amino acids and peptides; Protein structure and function; Enzymes, Coenzymes and vitamins; Carbohydrates; Glycolysis and Gluconeogenesis; Citrate cycle and respiratory chain; Photosynthesis; Lipids and membranes; Protein metabolism

Microbiology: History and sub-fields of microbiology; morphology and structure of prokaryotes and eukaryotes ; Microbiological methods; Classification and structure of phylogenetic system; Growth of unicellular microorganisms; Fundamentals of microbial primary metabolism; Anaerobic respiration processes and microbial fermentations; Lithotrophy & utilization of inorganic electron donors; Microbial metabolism; Microbial evolution; Microbial ecology and global material cycles; Fundamentals of microbial biotechnology and environmental microbiology

Module Grade Calculation

The module grade is calculated from the LP-weighted average of the four parts of the module.

Workload

Attendance time:

- Winter Semester Lecture of 4 SWS: 60 hrs
- Summer Semester lecture of 4 SWS: 60 hrs

Homework

- Self-study time: 70 hrs
- Exam preparation: 80 h (each part about 20 hrs)

Recommendations

None

T-CIWVT-113024	Laboratory Work: Downstream Processing		3 CP	Hubbuch

Assessment

Learning control consist of

- written examination of 120 min duration
- Lab work

Prerequisites

Prerequisites for participation in the module: None.

Prerequisites for participation in the lab:

- The written exam *Microbiology* must have been passed.
- The *Laboratory Work: Microbiology for Engineers* must have been passed.
- The written exam *Biopharmaceutical Process Engineering* must have been started (participation in the exam, but not necessarily passed).

Competence Goal

Overview on unit operations for protein separations and respective analytics used in the biotechnological industry.

Content

The elcture series addresses fundamentals in biotechnological purification of bio-products and respective analytics.

Lab:

Methods for the purification of proteins, which are based on solubility of proteins as well as on interactions between proteins and carrier materials. Sampling and sample preparation; protein characterisation; analytical methods for the determination of product concentrations; determination and calculation of the various process parameters; graphical representation and interpretation of the results; linearisation procedures; computer-aided process modelling and optimisation.

Module Grade Calculation

ECTS-weighted mean of written examination and lab work.

Workload

Lectures and exercises: 60 h

Homework: 80 h

preparation of examination: 40 h

Lab Work (one week):

Attendance time: 40 h

preparation and reports: 50 h

Recommendations

The contents of the following modules are important for understanding:

- Introduction to Bioengineering
- Bioprocess Engineering

Assessment

Learning control ist an wirtten exam lastring 120 minutes.

Prerequisites

None.

Competence Goal

Subject-specific and methodological competencies:

The students

- Know the fundamental steps involved in developing a bioprocess, from concept to implementation.
- Understand and apply fundamental methods relevant to each stage of bioprocess development.
- Recognize how successive steps in bioprocess development are interconnected and how changes in one stage affect others.
- Be aware of the complexity and multidisciplinary nature of bioprocess development, integrating knowledge from biology, chemistry, engineering, and business.
- Learn to theoretically design a new bioprocess from scratch, considering all relevant constraints.
- Evaluate and mitigate critical steps and risks during bioprocess development.
- Develop bioprocesses with the end in mind, taking into account market requirements, cost efficiency, and sustainability.
- Stay informed about emerging trends, new methods, and technologies in the field, including the impact of artificial intelligence on future bioprocess development.

Social and self-competence:

The students

- Identify and summarize key elements and constraints of complex bioprocesses
- Developed effective communication skills to successfully work with experts from different disciplines involved in bioprocess development.
- Engaged in independent learning to continuously expand knowledge and adapt to new challenges in the field.
- Developed critical thinking, creativity and problem-solving skills necessary for developing fundamentally new processes and solutions
- Developed potential solutions and consider options for the development of a bioprocess

Content

Successful bioprocess development requires a range of technical and communication skills. The course will link microbial strain engineering with bioprocess engineering and connects the basic bioengineering knowledge gained in the first years of studies. Knowledge of previous courses will be reinforced and applied for the technical development of bioprocesses. Central guidelines and concepts to develop robust, economic and sustainable bioprocesses will be introduced. The objective of this course is to provide the students with the necessary and fundamental insight into bioprocess development and how different fields interact with each other. This includes (i) defining the product and (ii) the choice of raw material (ii), microbial host selection (iii), strain engineering (iv), bioprocess optimization (v), and scale-up and operation of the bioprocess (vi). State of the art knowledge will be supported by insights into emerging fields and topics within bioprocess development such as miniaturization, automatization, digitalization that will accelerate bioprocess development in future. The students will learn to think interdisciplinary and to apply the key principles of the different bioprocess development steps to develop future bioprocesses.

Teaching formats include a combination of lectures, exercises and case studies. Lecture topics include:

1. Bioprocess development workflow and guidelines
2. Substrate and host selection
3. Strain engineering and screening
4. Bioprocess optimization
5. Bioprocess-scale-up
6. Cost and sustainability estimation
7. Case studies
8. Regulatory and quality control requirements
9. Digitalisation and artificial intelligence

Module Grade Calculation

The module grade is the grade of the written exam.

Workload

- Attendance time: Lectures and exercises 60 hrs
- Homework: Wrap-up and preparation of lectures and exercises: 80 hrs
- Exam preparation: 40 hrs

T-CIWVT-114542	Laboratory Work: Bioprocess Development		3 CP	Grünberger

Assessment

Learning consists of

- Written exam lasting 120 minutes.
- Examination of another type: Lab course.

Prerequisites

Prerequisites for participation in the module: None.

Prerequisites for participation in the lab:

- The written exam *Microbiology* must have been passed.
- The *Laboratory Work: Microbiology for Engineers* must have been passed.
- The written exam *Bioprocess Development* must have been started (participation in the exam, but not necessarily passed).

Competence Goal

Subject-specific and methodological competencies:

The students

- Know the fundamental steps involved in developing a bioprocess, from concept to implementation.
- Understand and apply fundamental methods relevant to each stage of bioprocess development.
- Recognize how successive steps in bioprocess development are interconnected and how changes in one stage affect others.
- Be aware of the complexity and multidisciplinary nature of bioprocess development, integrating knowledge from biology, chemistry, engineering, and business.
- Learn to theoretically design a new bioprocess from scratch, considering all relevant constraints.
- Evaluate and mitigate critical steps and risks during bioprocess development.
- Develop bioprocesses with the end in mind, taking into account market requirements, cost efficiency, and sustainability.
- Stay informed about emerging trends, new methods, and technologies in the field, including the impact of artificial intelligence on future bioprocess development.

Social and self-competence:

The students

- Identify and summarize key elements and constraints of complex bioprocesses
- Developed effective communication skills to successfully work with experts from different disciplines involved in bioprocess development.
- Engaged in independent learning to continuously expand knowledge and adapt to new challenges in the field.
- Developed critical thinking, creativity and problem-solving skills necessary for developing fundamentally new processes and solutions
- Developed potential solutions and consider options for the development of a bioprocess

Lab Course:

- are able to independently model and simulate biotechnological processes.
- are able to create flow diagrams, select and interconnect process modules and calculate material and energy balances.
- understand the basics of cost estimation and can calculate investment and operating costs for bioprocesses with SuperPro Designer.
- are able to evaluate process alternatives from a technical, economic and ecological point of view and identify optimization potential.
- are able to critically interpret the results and use them for the development and scale-up of biotechnological processes

Content

Successful bioprocess development requires a range of technical and communication skills. The course will link microbial strain engineering with bioprocess engineering and connects the basic bioengineering knowledge gained in the first years of studies. Knowledge of previous courses will be reinforced and applied for the technical development of bioprocesses. 5 CP	graded	Each winter term	1 term	German	3	2

ID	Name	Term offered	Credits	Lecturers
Mandatory				
T-CIWVT-113019	Bioprocess Engineering	WT	5 CP	Grünberger, Hubbuch

Assessment

Learning control is a written exam lasting approx. 120 minutes.

Prerequisites

None

Competence Goal

The students are able to apply basic operations and concepts of process engineering to bioprocesses. They can transfer reaction engineering approaches to microbial metabolism and use them to understand real processes. They know different processes, bioreactors and process control strategies in theory and learn how to calculate and evaluate real processes from a theoretical and application perspective. They will learn to interpret, discuss and critically assess various bioprocesses in detail. Students can analyze, structure and formally describe problems in the area of biotechnological separation processes. The students are able to critically assess the different procedures.

Content

Bioprocess engineering encompasses the design, operation, control, and optimization of biochemical processes involving various biological pathways or reactions mediated by living cells of animals, plants and microorganisms or enzymes under controlled conditions for the efficient biotransformation of raw material into a range of products at requisite scales. Bioprocesses have been developed for production of wide variety of commercial products ranging from cheap to expensive specialty chemicals as antibiotics, therapeutic proteins and vaccines. Bioprocess engineering is thus the backbone of the biotechnology industry that translates the research and development to the industries and mainly consists of three fields: (i) Upstream processing (ii) Bioreactor and bioreactions (iii) downstream processing.

The course will link with basic engineering and biotechnological knowledge gained in the first years of studies. Knowledge of previous courses will be reinforced and applied for the technical development of bioprocesses. The objective of this course is to provide the students with the necessary and fundamental insight of bioprocess engineering. This includes fundamentals in biocatalysis (mainly cells as biocatalysts), microbial kinetics, mass and energy balance in bioprocesses and kinetics of bioprocesses and fermentation. Here focus will be laid on fundamental kinetic and stoichiometric principles of microbial metabolism. Based on that design and evaluation of cultivation media will be discussed. In the second part bioreactor engineering design, operation and optimization principles of fermentation processes for the production of high value bio-products will be discussed. Topics include fundamentals of process control strategies such as batch, fed-batch and continuous cultivations. Construction operation, function of different types of bioprocesses will be demonstrated. Advantages and disadvantages will be discussed. First insights into bioprocess analytics and control will be given. Finally, an outlook into emerging topics within bioprocess engineering is given, including topics such as automatization and digitalization of bioprocesses and economic and sustainability considerations of bioprocesses. Furthermore, introduction into fundamentals of downstream processing will be given, including cell disruption, solid-liquid separation, partitioning, adsorption and chromatography. The students will learn to think interdisciplinary and to apply the key principles of the different bioprocess development steps. Lecture contents will be deepened by exercises.

Module Grade Calculation

Grade of the module is the grade of the written examination.

Workload

- Lectures: 60 h
- Homework: 50 h
- Exam Preparation: 40 h

T-CIWVT-103669	Biotechnology		9 CP	Perner-Nochta

Assessment

The module comprises two graded learning controls:

1. written examination last in 90 minutes.
2. practical work/ protocol/ presentation

- project plan
- project work
- poster presentation/ talk
- report

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

Basic understanding of processes and synthesis of processes in biotechnologic production

Lecture Bioanalytics:

The students can describe the selection and implementation of methods for the analysis of biomolecules. Students will be able to evaluate the advantages and limitations of the various methods with regard to their areas of application in biotechnological research in the context of various biomolecules (in particular DNA, RNA, proteins/enzymes, metabolites). Students are able to select suitable methods and experimental designs for their own (future) work in the context of qualitative and quantitative bioanalytics.

Lecture „Management of scientific projects“ and exercises:

The students are able to conduct literature research on their own, design own experiments, evaluate their own data, write own scientific texts. They can plan their own small project regarding time and finances required and prepare a project plan as well as present it. They can prepare a (scientific) poster and present it.

Project Work:

The students are able to do own scientific research and practical work in the field of biotechnology. They know how to analyse their own gained data and prepare a project report.

Content**Lecture Bioanalytics:**

The lecture will introduce the most important methods for the analysis of biomolecules. According to the genetic information flow in the cell, methods of bioanalysis for DNA, RNA, proteins/enzymes and metabolites are taught. The theory and application of methods are illustrated using research examples. Methods focus on sequencing technologies, protein analysis, enzymology, chromatographic methods and the basics of mass spectrometry and NMR. Other microscopy methods and reporter systems for analyzing biomolecules in whole cells are also presented.

Lecture „Management of scientific projects“ and exercises:

The lecture covers literature research, design of experiments, data evaluation, scientific writing and project management; in parts it is software-based and carried out in an electronic classroom.

Practical exercises cover literature research, preparation of a project plan, presentation of the project plan, preparation of a poster, presentation of the poster

Project Work:

Accomplishment of autonomous investigation and practical work in the field of biotechnology, preparation of a project report

Module Grade Calculation

weighted mean based on LP.

Workload

Assessment

Learning control is a written examination lasting 120 minutes.

Prerequisites

None

Competence Goal

Students can analyse and design reactors for chemical and enzymatic-biochemical conversions in homogeneous phase. They are able to promote the formation of a certain desired product in multi-step reactions, when parallel and consecutive steps can yield further products. Furthermore, students can apply balances of energy to identify conditions of safe reactor operation when exo- and endothermic reactions are run.

Content

Application of mass and energy balances for the analysis and design of ideal reactors for single-phase conversions, and for the identification of optimum operation conditions.

Module Grade Calculation

Assessment

The learning control consists of two partial achievements:

1. Oral exam on lectures, exercises and case studies, duration approx. 30 minutes.
2. Project work, examination of another type. The term paper and the presentation of the results are graded.

Prerequisites

Participation in the Specialization/ Project Work is only possible if the following achievements have been made:

- At least 60 credits
- At least one lab

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students understand important material systems and essential process steps of the provision and recycling of mineral and metallic raw materials and anthropogenic carbon. With the aim of closing cycles, they can use methods of process evaluation, such as analysis and assessment of process chains using efficiency indicators. To do this, students work on increasingly complex case studies in a team using scientific methods and finally apply these methods during project work.

Content

Introduction to transition in resources and technologies towards a sustainable circular economy. Knowledge acquisition in system analysis, in process efficiency assessment and in sustainability evaluation. Motivation for process engineering research and development in the field of sustainable raw material supply of a climate-neutral society:

- Material flow and process knowledge of the primary and the recycling industries
- Methodological knowledge (business management basics of relevance, material flow analysis, determination of performance indicators)
- Independent scientific work (application of knowledge, analysis, assessment) in case studies / as project work.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

WorkloadAttendance time:

- Lectures and exercises: 45 h
- Project work: 80

Self-study:

- Wrap up lectures: 45 h
- Wrap up case studies: 60 h
- Preparation term paper and presentation: 40 h

Exam preparation: 90 h

ID	Name	Term offered	Credits	Lecturers
Mandatory				
T-CIWVT-114998	Practical: Synthesis of Electrochemical Materials	ST	2 CP	Wolf
T-ETIT-114245	Electrochemical Energy Technologies	ST	3 CP	Krewer

Assessment

The Learning control consists of two partial achievements:

- written exam lasting 120 minutes.
- practical: ungraded coursework

Prerequisites

None.

Competence Goal

Students have well-grounded knowledge of electrochemical energy technologies for conversion and storage of electrical energy. They know the working principle of fuel cells, batteries, electrolyzers and redox flow cells and their components. They understand the underlying electrochemical, electrical and physical processes, and the resulting loss processes as function of operation and cell design. Participation in the course puts them in a position to build cells and evaluate and understand their performance and operating behavior. Furthermore, they can select the appropriate electrochemical cell for a given application, analyze, interpret and operate it. Students gain theoretical insight and practical experience in nanoparticle synthesis and preparation of electrocatalytic as well as electrode materials. They know relevant techniques for structural characterization and are able to analyze the corresponding data.

Content

Lecture: Electrochemical Energy Technologies

- Application and operating principle of electrochemical energy cells
- Thermodynamics, potential and voltage of electrochemical cells
- Electrochemical reactions and their kinetics
- Transport processes in electrochemical cells
- Design of electrochemical cells
- Operation of electrochemical cells

Exercise:

- Application of the theory to batteries, fuel cells and electrolyzers including example calculations

Practical: Synthesis of electrochemical Materials

- Theory on routes for material synthesis
- Synthesis of electrocatalysts and materials for electrodes
- Structural characterization of electrochemical materials

Module Grade Calculation

The module grade is the grade of the written exam.

Workload

- Attendance time in lectures, exercises: 30 hrs
- Homework: 30 hrs
- Exam preparation: 30 hrs
- Laboratory experiments: 5 experiments, 3 h each: 15 hrs
- Preparation and follow-up of practical course: 20 hrs
- Preparation of lab reports: 25 hrs

M**4.25 Module: Energy and Environmental Engineering [M-CIWVT-101145]**

Coordinators: Prof. Dr. Reinhard Rauch
Prof. Dr.-Ing. Dimosthenis Trimis

Organisation: KIT Department of Chemical and Process Engineering

Part of: [Specialization/](#) [Project Work](#)

Credits	Grading	Recurrence	Duration	Language	Level	Version
12 CP	graded	Each winter term	2 terms	German	4	4

ID	Name	Term offered	Credits	Lecturers
Mandatory				
T-CIWVT-103527	Energy and Environmental Engineering Project Work		4 CP	Rauch, Trimis
T-CIWVT-108254	Energy and Environmental Engineering		8 CP	Rauch, Trimis

Assessment

The learning control consists of two partial achievements:

- Written examination, duration 120 minutes
- Examination of another type, project work

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students will be able to discuss, analyze and compare applications in energy engineering and environmental protection (primary/secondary means, efficiency, raw materials etc.).

Content

Introduction into production of fuels (chemical energy carriers) from fossil and renewable sources and their use, prevention of formation of pollutants, removal of pollutants, review and selected examples, fundamentals and applications of high temperature energy conversion.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

Attendance time: 60 h
Excursions: 20 h
Self-Study: 90 h
Project work: 90 h
Exam preparation: 100 h

Recommendations

Courses of 1st - 4 th semester

Literature

lecture notes and specific literature indicated during lectures, additionally:

graded**Recurrence**
Each winter term**Duration**
1 term**Language**
German**Level**
4**Version**
1

ID	Name	Term offered	Credits	Lecturers
Mandatory				
T-CIWVT-101889	Energy Process Engineering	WT	5 CP	Scheiff, Stein

Assessment

Learning control is a written examination lasting 120 min.

Prerequisites

None.

Competence Goal

Students are able to

- understand the term energy and its various forms
- evaluate renewable and conventional process chains in terms of their emission intensity
- assess current developments in the field of energy supply
- solve engineering problems in energy conversion using various conversion methods
- address the interdisciplinary interface between energy process engineering and the framework conditions of energy policy.

Content**Part I:**

From Energy Materials to Chemical Energy Carriers

- Energy demand and impact of process-related emissions on the environment
- Conversion of energy materials into chemical energy carriers

Centralized and Decentralized Energy Systems

- Use of conventional energy carriers
- Role of renewable energy sources in energy system

Ecological, Economic and Political Aspects

- Energy infrastructure and distribution
- Energy policy and regulatory frameworks (energy market, German and European laws and climate targets)

Part II:

Fundamentals of Energy Conversion

- Basics: system, processes, state, thermodynamics
- State property changes of ideal gases
- Thermodynamic cycles

Fundamentals of Firing Technology

- Introduction, definitions, combustion with air
- Mass balance, energy balance, heating values
- Flame temperature, burn-out, flame length
- Heat transfer, flame types, flame stabilization

Fundamentals of Power Plant Technology

- Gas turbines
- Steam turbines

Fundamentals of Renewable Energy

- Introduction, resources
- Wind energy
- Solar energy

Module Grade Calculation

The module grade is the grade of the written exam.

Workload

- lectures: 45 h
- self-study: 60 h
- preparation of examination: 45 h

Recommendations

Knowledge of Thermodynamics I module (and, preferably, Thermodynamics II as well) is required.

M

4.27 Module: Engineering Mechanics: Dynamics [M-CIWVT-101128]

Assessment

The learning control consists of two partial achievements

1. Completed coursework/ prerequisite
2. a written examination lasting 120 minutes

Prerequisites

None

Competence Goal

Students possess basic knowledge in Engineering Mechanics/Dynamics, they are familiar with problem solving and able to use this knowledge for theoretical analysis and solution of practical engineering problems.

Content

Kinematics and dynamics of mass point;
 Kinematics and dynamics of rigid body;
 The principle of linear momentum, angular momentum, work and energy theorem;
 Oscillation of the systems with one or more freedom degrees;
 Relative movement of mass point;
 Methods in analytical Mechanics, Lagrange equation;

Module Grade Calculation

grade of the written examination. Superior preliminary test can be credited according to §7,13 SPO.

Workload

lectures and exercises: 56 h
 self study: 56 h
 preparation for examination 40h

Recommendations

modules of 1. -2. semester.

Assessment

Learning control consists of:

1. written exam lastin 120 minutes.
2. Non-graded precondition for participation:
4 of 5 compulsory exercises have to be approved or a group presentation has to be given during the lecture.

Prerequisites

Prerequisites for the module: None

Prerequisites within the module: Students may only take the written exam after successfully completing the prerequisite coursework.

Competence Goal

The students have the ability to analyse, to structure and to describe problems in fluid dynamics. The also can use the specific methods for the calculation of specific flows with the studied tools. Besides they are able to discuss the different procedures critically.

Content

Fundamentals of fluid dynamics: hydro static, aerostatik, compressible and incompressible flows, turbulent flows, Navier-Stokes equations, boundary layer theory

Module Grade Calculation

grade of the written examination

Workload

Attendance time: lecture 2 SWH, exercises 2 SWH: 60 hrs

Homework: 60 h

preparation of examination: 60 h

T-CIWVT-113021	Food Bioprocess Engineering	WT	6 CP	Leister

Assessment

Learning control is a written examination lasting approx. 120 minutes.

Prerequisites

None.

Competence Goal

Lecture:

Students will be able to describe the basics of microbial spoilage and the possibilities for preserving food and life science products. They will be able to analyze the suitability of different preservation methods for different products and assign their respective advantages and disadvantages. In addition, students can name biotechnologically produced foods and describe the corresponding processes and the equipment used. Using application examples from food bioprocess engineering, they can demonstrate, discuss and debate the special features of process control.

Exercise:

Students are able to carry out calculations for process design independently for selected applications and to use the necessary tools methodically and appropriately.

Content

The students learn

- which microorganisms are important for the safety and production of food and life science products.
- technical possibilities to ensure the safety of food.
- about selected historical biotechnological processes for food production and their modern technological implementation options.
- to understand the approach of a food engineer in product and process development based on current case studies.
- the calculation principles for technical process design.
- know product-oriented application examples.

Module Grade Calculation

The module grade is the grade of the written exam.

Workload

- Attendance time/ lectures and exercises: 60 hrs
- homework - wrap-up of lectures and exercises: 80 hrs
- exam preparation: 40 hrs

Literature

T-CIWVT-113021	Food Bioprocess Engineering	WT	6 CP	Leister
T-CIWVT-113022	Food Bioprocess Engineering Lab	WT	3 CP	Leister

Assessment

The Module comprises two learning controls:

1. written examination, duration 120 minutes
2. Lab

Prerequisites

Prerequisites for participation in the module: None.

Prerequisites for participation in the lab:

- The written exam *Microbiology* must have been passed.
- The *Laboratory Work: Microbiology for Engineers* must have been passed.
- The written exam *Food Bioprocess Engineering* must have been started (participation in the exam, but not necessarily passed).

Competence Goal

Lecture:

Students will be able to describe the basics of microbial spoilage and the possibilities for preserving food and life science products. They will be able to analyze the suitability of different preservation methods for different products and assign their respective advantages and disadvantages. In addition, students can name biotechnologically produced foods and describe the corresponding processes and the equipment used. Using application examples from food bioprocess engineering, they can demonstrate, discuss and debate the special features of process control.

Exercise:

Students are able to carry out calculations for process design independently for selected applications and to use the necessary tools methodically and appropriately.

Practical course:

Students will be able to produce biotechnologically manufactured foodstuffs themselves on a laboratory scale and document the procedure in a scientifically and formally correct manner. They will be able to predict the influence of changes in process and recipe parameters, measure them and discuss the results critically.

to secure food (and life science product) safety.

Content

- which microorganisms are important for the safety and production of food and life science products.
- technical possibilities to ensure the safety of food.
- about selected historical biotechnological processes for food production and their modern technological implementation options.
- to understand the approach of a food engineer in product and process development based on current case studies.
- the calculation principles for technical process design.
- to know product-oriented application examples.
- carry out small research studies in food product design.

Module Grade Calculation

The module grade is the CP-weighted average of the two graded partial achievements.

Workload

lectures and exercises, written exam:

- Attendance time/ lectures and exercises: 60 hrs
- homework - wrap-up of lectures and exercises: 80 hrs
- exam preparation: 40 hrs

Lab-Course: One week

- Attendance time: 40 hrs
- preparation of laboratory experiments, preparation of the experimental protocols: 50 hrs

T-CIWVT-103528	Food Technology	ST	5 CP	Leister
T-CIWVT-103529	Food Technology Project Work		7 CP	Leister

Assessment

The learning control consists of two partial achievements:

1. Oral examination (in the group) lasting approx. 45 minutes
2. Project work (presentation and report of results)

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students are able to design and evaluate simple food products. They learned to define, focus and solve tasks milestone-oriented as an interdisciplinary team. They gained in depth insight in the influence of recipe and process parameters on food quality parameters using a selected product produced on pilot scale. They will be able to present targets and results of their team project in a clear, conceptual and comprehensible manner.

Content

Lecture: Basic introduction to the design and quality assurance of selected foods;
 project work (team work): definition, production and evaluation of selected products as a team; presentation and defense of the project and its results incl. degustation in a bigger group;
 field trip to industrial production plants

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

- Attendance time: 115 hrs
(lecture 2 SWS, project work 5 SWS)
- self study: 185 hrs
(project design, project meetings, research on project work, lab, preparation and wrap-up)
- exam preparation: 60 hrs

Literature

Will be offered within the lecture, depending on products available

M**4.33 Module: Formulation and Characterisation of Energy Materials [M-CIWVT-106700]****Coordinators:** Dr.-Ing. Claude Oelschlaeger**Organisation:** KIT Department of Chemical and Process Engineering**Part of:** [Specialization/ Project Work](#) (Usage from 10/1/2024)**Credits**

T-CIWVT-113479	Formulation and Characterisation of Energy Materials - Project Work	ST	4 CP	Oelschlaeger

Assessment

The learning control consists of two partial achievements:

1. project work (teamwise)
2. oral examinations (courses)

The oral examinations have to be passed as a precondition for project work

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

Basic knowledge about the design of complex fluids based on dispersions or emulsions by chemical engineering processes. Fundamental comprehension of applications and working properties, flow behavior and colloidal stability of disperse systems. Applying this knowledge in context of their project work. They gather experience in teamoriented problem solving.

Content

Representation of a systematic of the relation between the quality aspects of products and their physico-chemical properties. Furthermore, these properties are generated in the respective production processes. This systematics is fundamentally presented in the lecture "Fabrication and rheological characterization of energy materials". The application of this systematics is practiced on specific case studies.

M**4.34 Module: Fundamentals of Refrigeration [M-CIWVT-104457]**

Assessment

The learning control consists of two partial achievements:

1. Project work/ presentation, examination of another type
2. Oral exam of about 30 minutes duration

The project work is a prerequisite for the oral examination.

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

Students are able to explain and apply the fundamentals of refrigeration to various refrigeration technologies. They are able to describe properties of refrigerants and working fluids, and to assess their environmental impact based in different criteria. The students can develop concepts of refrigeration and heat pump processes using phase diagrams and fluid property models, and they are able to explore the energy consumption based on first and second law analyses. They are able to design various circuit configurations, to dimension and select refrigeration compressors and heat exchangers, and to design suitable control systems.

Content

Introduction to the fundamentals of refrigeration, phase diagrams, energy transformation based on first and second law analyses, refrigerants and working fluids including their environmental impact, design of common refrigeration and heat pump processes, major circuit components and process control.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

Attendance time: Lecture 2 SWS, Exercises 1 SWS: 45 h

Learning control is a written exam, 150 min to lecture " General Chemistry and Chemistry of Aqueous Solutions" (lecture 3 SWS, exercises 2 SWS)

Prerequisites

None

Competence Goal

The students receive a basic knowledge of the general chemistry. They get basic knowledge about the periodic system of the elements, the chemical bonds, and the geometry of molecules. They can describe the principles and the criteria about the reactions in aqueous solutions, about acid and bases, reaction kinetics, the chemical equilibrium and electrochemistry.

Content

Basics of general, inorganic and physical chemistry.

Module Grade Calculation

The module grade ist the grade of the wirtten exam.

Prerequisites

Organic Chemistry

Competence Goal

Consolidate knowledge of organic materials and types of chemical reactions; understand logic relations between types of chemical reaction and technical processes, for selected examples; understand industrial material conversion pathways from raw materials to final products.

Content

Feedstock's for industrial processes of organic chemistry, industrial production of basic chemicals and intermediates using practical examples, digitalization and industry 4.0 in the chemical industry.

Mechanism during formation of synthetic macromolecules, production and properties of plastics and polymers, spectroscopic methods of analyzing organic molecules.

ID	Name	Term offered	Credits	Lecturers
Mandatory				
T-CIWVT-112998	Intensification of Bioprocesses - Written Exam		6 CP	Holtmann

Assessment

The learning controls a written examination, duration: 90 minutes.

Prerequisites

None.

Competence Goal**Technical and methodological competencies**

Students will be able to:

- explain the concepts of process intensification
- describe different intensified processes quantitatively
- design and evaluate bioprocess engineering processes on the basis of PI
- analyse interdisciplinary problems at the interface of technology and biological systems and develop solutions to problems
- develop processes with optimal productivities using as little energy and raw materials as possible by combining the advantages of individual disciplines

Social and personal competence

The students will be able to:

- analyse the framework conditions for innovative processes and identify the essential aspects
- identify and evaluate (interdisciplinary) process options
- become independently familiar with new topics
- summarize complex scientific processes

Content

Companies in the chemical and biotechnology industries face particular challenges in times of rising raw material costs, increased competition, and shorter product life cycles.

Process-intensified operations offer great potential for resource efficiency by helping to save materials and energy. According to a generally accepted definition, "Process Intensification (PI) is a collection of revolutionary innovative principles (paradigm shifts) for equipment and processes that can lead to significant improvements in process or process chain efficiency, investment and operating costs, quality, waste, process safety (and other aspects)".

In recent years, process intensification methods have been increasingly used in bioprocess engineering (USP and DSP). These methods are the focus of this module. The following topics are covered in the module:

- Definition of PI, distinction between process optimization and PI.
- Examples from chemical engineering
- Intensified bioreactors and reactor selection (e.g., single-use technologies, rotating bed reactors, enzyme membrane reactors, biofilm reactors)
- PI through adapted operating modes (e.g., repeated fed-batch, perfusion, continuous processes, in situ product removal)
- Process intensification through immobilized enzymes and microorganisms
- Integration of chemo- and biocatalysis
- Electro biotechnological processes
- Photo biotechnological processes
- Use of ultrasound and microwaves for bioprocess intensification
- Bioprocesses in alternative reaction media
- Use of extremophilic organisms / unconventional production organisms

In all sub-areas, the focus is on the quantitative description of the intensified processes.

Module Grade Calculation

The module grade is the grade of the written exam.

Workload

- Attendance time: 60 hrs lectures and exercises
- Preparation and wrap-up lectures: 80 hrs
- Exam preparation: 40 hrs

Recommendations

Fundamentals in bioprocess engineering are required.

1

ID	Name	Term offered	Credits	Lecturers
Mandatory				
T-CIWVT-112998	Intensification of Bioprocesses - Written Exam		6 CP	Holtmann
T-CIWVT-112999	Intensification of Bioprocesses - Lab		3 CP	Holtmann, Neumann

Assessment

The learning control consists of two partial achievements:

- Written examination, duration: 90 minutes
- Laboratory work: Examination of another type

Prerequisites

Prerequisites for participation in the module: None.

Prerequisites for participation in the lab:

- The written exam *Microbiology* must have been passed.
- The *Laboratory Work: Microbiology for Engineers* must have been passed.
- The written exam *Intensification of Bioprocesses* must have been started (participation in the exam, but not necessarily passed).

Competence Goal**Technical and methodological competencies**

Students will be able to:

- explain the concepts of process intensification
- describe different intensified processes quantitatively
- design and evaluate bioprocess engineering processes on the basis of PI
- analyse interdisciplinary problems at the interface of technology and biological systems and develop solutions to problems
- develop processes with optimal productivities using as little energy and raw materials as possible by combining the advantages of individual disciplines

Social and personal competence

The students will be able to:

- analyse the framework conditions for innovative processes and identify the essential aspects
- identify and evaluate (interdisciplinary) process options
- become independently familiar with new topics
- summarize complex scientific processes

Content

Companies in the chemical and biotechnology industries face particular challenges in times of rising raw material costs, increased competition, and shorter product life cycles.

Process-intensified operations offer great potential for resource efficiency by helping to save materials and energy. According to a generally accepted definition, "Process Intensification (PI) is a collection of revolutionary innovative principles (paradigm shifts) for equipment and processes that can lead to significant improvements in process or process chain efficiency, investment and operating costs, quality, waste, process safety (and other aspects)".

In recent years, process intensification methods have been increasingly used in bioprocess engineering (USP and DSP). These methods are the focus of this module. The following topics are covered in the module:

- Definition of PI, distinction between process optimization and PI.
- Examples from chemical engineering
- Intensified bioreactors and reactor selection (e.g., single-use technologies, rotating bed reactors, enzyme membrane reactors, biofilm reactors)
- PI through adapted operating modes (e.g., repeated fed-batch, perfusion, continuous processes, in situ product removal)
- Process intensification through immobilized enzymes and microorganisms
- Integration of chemo- and biocatalysis
- Electro biotechnological processes
- Photo biotechnological processes
- Use of ultrasound and microwaves for bioprocess intensification
- Bioprocesses in alternative reaction media
- Use of extremophilic organisms / unconventional production organisms

In all sub-areas, the focus is on the quantitative description of the intensified processes.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

Lectures and exercises:

- Attendance time: 60 hrs
- Preparation and wrap-up lectures: 80 hrs
- Exam preparation: 40 hrs

Lab course (90 hrs in total)

- Preparation
- Experiments
- Experimental protocols

Recommendations

Fundamentals in bioprocess engineering are required.

Prerequisites

60 LP, at least one lab work passed.

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

Students can

- explain basic, future-oriented processes of thin film technology
- explain a process chain of a scientific question up to its answer: planning, conceptual design, implementation, execution and evaluation of fundamental experiments, describing aspects for implementation on a technical scale (scale-up)
- work scientifically using standard IT tools
- present scientific results
- independently acquire specialist knowledge

Assessment

Success control takes place in the form of other types of examination. It consists of four experiments and written reports are assessed in each case. The module grade is based on the overall impression.

The successfully completed experiments together form an examination unit. If you fail, you have to repeat the internship in its entirety.

Prerequisites

None

Competence Goal

The students learn the technical fundamentals of electrochemical technologies as well as measurement methods for their characterization. They understand how to experimentally analyze and quantitatively describe processes at interfaces under substrate conversion by charge transfer. They are able to build electrochemical cells, understand their functional principle and are able to determine electrochemical processes. Furthermore, they are able to apply electrochemical measurement methods specifically to questions that are relevant for the analysis of modern energy converters and storage technologies.

They are also able to document and evaluate measured data and to critically discuss the results. They can competently carry out error estimations and confidently master computer-assisted data evaluation.

Content

Methods course: Introduction to electrochemical processes and measurement techniques

Four selected electrochemistry experiments will be carried out:

Experiment 1: Determination of transport parameters of reversible systems

- Voltammetry at a stationary electrode
- Voltammetry at a rotating disc electrode

Experiment 2: Determination of hydrogen and oxygen overvoltage

Experiment 3: Construction of a polymer electrolyte membrane fuel cell

Experiment 4: Investigation of the self-constructed PEM fuel cell under various operating conditions

Module Grade Calculation

The module grade results of the assessment of the written reports. Details will be given during the lecture.

Additional Information

Participation in the safety instruction and the methods course is mandatory. Participation in the safety instruction is required in the same examination period as the internship and must be completed again if the internship is repeated.

Workload

1. Methods course incl. preparation and follow-up: 30 h
2. Attendance time in the practical course: 4 x 5 h (block course)
3. Preparation for the experiments: 30 h
4. Preparation of protocols: 100 h

Total: 180 h

T-CIWVT-101886	Mechanical Processing	WT+ST	6 CP	Dittler

Assessment

Learning control is a written examination lasting 135 minutes (15 minutes reading time and 120 minutes to complete the tasks).

Prerequisites

None

Competence Goal

Students have a basic understanding of properties & behavior of particulate systems in important engineering applications; they are able to use this understanding for calculations and design of selected processes.

Content

- Unit operations of mechanical processing - introduction and overview
- Particle size distribution - determination, depiction, conversion
- Forces on particles in flows
- Separating function - characterization of a separations process
- Fundamentals of mixing and stirring
- Introduction to dimensional analysis
- Characterizations of packings
- Capillarity in porous systems
- Flow through porous systems, fluidized bed
- Fundamentals of agglomeration
- Fundamentals of storage and conveyance

Module Grade Calculation

The module grade is the grade of the written exam.

Workload

- Attendance time: Lectures and exercises: 60 hrs
- Self-study: 45 hrs (about three hours per week)
- Preparation of examination: 75 hrs

Recommendations

Courses of 1st - 4th semester

Mandatory				
T-CIWVT-103448	Mechanical Separation Technology Exam	ST	8 CP	Gleiß
T-CIWVT-103452	Mechanical Separation Technology Project Work		4 CP	Gleiß

Assessment

The learning control consists of two partial achievements:

1. An oral individual examination with a duration of about 30 minutes for the lecture "Mechanical Separation Technology" and related exercises
2. Project work. Practical collaboration, written report and oral presentation of the results are rated.

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students are able to explain the fundamental laws and the derived physical principles of the particle separation from liquids and not only to relate them to the principally suited separation apparatuses but also special variants. They have the ability to apply the relationship between product operation and design parameters to different separation techniques. They can analyse separation problems with scientific methods and give alternative problem solution proposals. The students are able to execute their fundamental and process knowledge practically to the example of beer brewing.

Content

Physical fundamentals, apparatuses, applications, strategies; characterisation of particle systems and slurries; pretreatment methods to enhance the separability of slurries; fundamentals, apparatuses and process technology of static and centrifugal sedimentation, flotation, depth filtration, crossflow filtration, cake forming vacuum and gas overpressure filtration, filter centrifuges and press filters; filter media; selection criteria and scale-up methods for separation apparatuses and machines; apparatus combinations; case studies to solve separation problems.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

Workload

Lecture 3 SWS exercises 1 SWS:

- attendance time: 60h
- self-study: 80h
- examination preparation: 80h

project work

- attendance time and self-study: 140h

Literature

Anlauf: Script "Mechanische Separationstechnik - Fest/Flüssig-Trennung"

M**4.47 Module: Medical Imaging Technology [M-ETIT-106778]****Coordinators:** Prof. Dr.-Ing. Maria Francesca Spadea**Organisation:** KIT Department of Electrical Engineering and Information Technology**Part of:** [Specialization/ Process Engineering \(Specialization Process Engineering\)](#) (Usage from 4/1/2025)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	English	4	1

ID	Name	Term offered	Credits	Lecturers
Mandatory				
T-ETIT-113625	Medical Imaging Technology	ST	6 CP	Spadea

Assessment

The examination takes place in form of a written examination lasting 120 minutes.

Prerequisites

none

Competence Goal

For each imaging modality students will be able to:

- identify required energy source;
- analyze the interactions between the form of energy and biological tissue distinguishing desired signal from noise contribution;
- critically interpret the image content to derive knowledge
- evaluate image quality and implementing strategies to improve it.

Moreover, the students will be able to communicate in technical and clinical English language.

Content

- Basic knowledge of mathematical and physical principles of medical imaging formation, including X-ray based modalities, nuclear medicine imaging, magnetic resonance imaging and ultrasound
- Components of medical imaging devices.
- Assessment of image quality in terms of signal-to-noise-ratio, presence of artifact, spatial, Spectral and temporal resolution
- Safety and protection for patients and workers.

Module Grade Calculation

The module grade is the grade of the written exam.

A bonus can be earned for voluntary tasks such as:

- presentation and discussion of a specific topic,
- participation to writing the lecture minutes
- implementation of educational tools

The exact criteria for awarding a bonus will be announced at the beginning of the lecture period. If the grade in the oral exam is between 4.0 and 1.3, the bonus improves the grade by 0.3 or 0.4.

Bonus points do not expire and are retained for any examinations taken at a later date.

Workload

1. attendance in lectures and exercises: 15*4 h = 60 h
2. preparation / follow-up: 15*6 h = 90 h
3. preparation of and attendance in examination: 30 h

A total of 180 h = 6 CR

Recommendations

Basic knowledge in the field of physics and signal processing is helpful.

M**4.48 Module: Mentoring - Group Management [M-CIWVT-108007]****Coordinators:** Dr.-Ing. Barbara Freudig**Organisation:** KIT Department of Chemical and Process Engineering**Part of:** [Interdisciplinary Qualifications \(Soft Skill Qualifications\)](#)**Credits**

T-CIWVT-103667	Micro Process Engineering		5 CP	Dittmeyer, Pfeifer

Assessment

The learning control consists of three partial achievements:

1. Oral examination of about 25 minutes duration
2. project work

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students are able to apply the methods of process intensification by microstructuring of the reaction zone and are capable of analyzing the advantages and disadvantages while transferring given processes into microreactors. With knowledge of special production processes for micro reactors, students are able to design microstructured systems in terms of heat exchange and to analyze the possibilities of transferring processes from conventional technology into the microreactor with regard to heat transfer performance. They understand also how the mechanisms of mass transport and mixing interact in microstructured flow mixers, and are able to apply this knowledge to the combination of mixing and reaction. They can also analyze possible limitations in the process adaptation and are thus able to design microstructured reactors for homogeneous reactions appropriately. The students understand the significance of the residence time distribution for the conversion and selectivity and are capable of analyzing the interaction of mass transport by diffusion and hydrodynamic residence time in microstructured equipment in given applications.

Content

Basic knowledge of micro process engineering systems: fabrication of microstructured systems and interaction with processes, intensification of heat exchange and special effects by heat conduction, residence time distribution in reactors and peculiarities in microstructured systems, structured flow mixers (designs and characterization) and dimensioning of structured reactors with regard to heat and mass transfer.

Module Grade Calculation

The module grade is the CP-weighted average of the two partial achievements.

3**Version**
2

ID	Name	Term offered	Credits	Lecturers
Mandatory				
T-ETIT-111815	Physiology and Anatomy for Biomedical Engineering	WT	6 CP	Nahm

Assessment

The examination is carried out in the form of a written test of 120 minutes.

The examination includes the contents of Physiologie und Anatomie I (offered every winter term) and Physiologie und Anatomie II (offered every summer term).

Prerequisites

The modules "M-ETIT-100390 - Physiologie und Anatomie I" and "M-ETIT-100391 - Physiologie und Anatomie II" must not been started.

Competence Goal

After studying this module

- students will be able to describe and explain the basic structural and functional principles of the organism at various levels of organization (molecular and cellular to organ and organ system level) in order to classify the organism in its environment,
- have the ability to apply this knowledge to explain higher-level organ and organ system functions,
- know advanced mathematical, scientific and engineering methods for describing physiological processes and are able to apply them,
- be able to describe the functional relationships at the organ and organ system level from a diagnostic and therapeutic perspective and derive the requirements for medical technology systems from this
- and can identify the sources of biosignals and derive connections between physiological parameters and physical measured variables.

Sustainability competence objective: The students have actively shaped their learning process.

Content**Physiologie und Anatomie I (winter semester)**

This course provides basic knowledge of the major human organ systems and medical terminology. It is intended for students of technical courses who are interested in physiological issues.

Topic blocks:

- Organizational levels of the organism
- Building blocks of life
 - Proteins
 - Lipids
 - Carbohydrates
 - Lipids
 - Nucleic acids
- Cells
 - Structure
 - Membrane transport processes
 - Protein biosynthesis
 - Cell respiration
 - Nerve cells
 - Muscle cells
- Tissue
 - Tissue types
 - Cell connections
- Sensory organs
 - Eye
 - Hearing

Physiologie und Anatomie II (summer term)

This course expands on the knowledge taught in the first part of the course and introduces additional human organ systems.

Topic blocks:

- The nervous system
 - Anatomy and functional structure
- The cardiovascular system
 - Anatomy and function of the heart
 - Vascular system and blood pressure
- The respiratory system
 - Anatomy and ventilation
 - Gas transport
- The digestive system
 - Anatomy
 - Physiology of digestion
- The endocrine system
 - Endocrine organs
 - Hormonal signal transduction
- Acid-base balance
- Water-electrolyte balance
- Thermoregulation

Module Grade Calculation

The module grade is the grade of the written exam.

Bonus points can be awarded for a student contribution to the lecture.

- The student contribution consists of the formulation of learning objectives and questions to check the learning objectives for the lecture units. The corresponding lecture units are made available for selection in ILIAS.
- The students create the student contributions in small groups. They submit their contribution in the form of a PowerPoint presentation in ILIAS by the specified deadline.
- The presentation will be corrected and approved by the lecturer or course tutor if necessary.
- The contribution will be presented by the group in the following lecture unit within the specified period and discussed with the plenum. If necessary, the presenting group takes on board the feedback and creates a revised version. The final version of the contribution is made available to all lecture participants in ILIAS for exam preparation.
- Bonus points are awarded by the lecturer on the basis of the written paper and the presentation in the plenary session.
- Each participant can earn a maximum of 6 bonus points. Bonus points can only be earned once.
- Participation in the student contributions is voluntary.

The bonus points are credited as follows:

- A maximum of 6 points can be credited to the exam result for the bonus task passed.
- The grade can thus be improved by a maximum of one grade step.
- The total number of points remains limited to 120 points. The bonus points are only taken into account if the exam is passed. Bonus points do not expire and are retained for any examinations taken at a later date.

Additional Information

This module is part of the Orientation Exam of SPO BSc Medizintechnik § 8. The examination must be taken by the end of the 2nd semester. A repeat examination must be taken by the end of the 3rd semester.

Workload

The workload includes:

- Attendance time in lectures (2 h, 30 appointments each) = 60 h
- Self-study (3 h, 30 appointments each) = 90 h
- Preparation / post-processing = 30 h

Total effort approx. 180 hours = 6 LP

Teaching and Learning Methods

Winter/summer term:

- WT: Physiologie und Anatomie I
- ST: Physiologie und Anatomie II

T-CIWVT-103556	Process Development and Scale-up Project Work	ST	4 CP	Sauer
T-CIWVT-111005	Exercises Process Development and Scale-up	WT	0 CP	Sauer

Assessment

The learning control consists of three partial achievements:

- Project work/ presentation and report
- Ungraded online-tests (prerequisite for oral examination)
- Individual oral examination, duration 30 minutes

Prerequisites

Participation requires

- minimum 60 ECTS
- minimum 1 lab course

Modeled Prerequisites

The following conditions have to be fulfilled:

1. You need to have earned at least 60 credits in your study program.

Competence Goal

The students are capable of developing energy and material balances for complex processes in process technology and to analyze processes in terms of potentials for optimization. They are able to derive suitable methods for the optimization of such processes.

The students are able to calculate the costs of major pieces of equipment and to apply estimation methods for investment costs of production plants. Together with the calculation of variable production costs they are able to analyze the profitability of a chemical process plant. Furthermore the students learn basic concepts of project management, they are enabled to work in teams and guided for independent scientific work.

Content

Introduction into the basics of process development and project management for the development of chemical processes from the lab into production scale, including the design of a chemical process, design of miniplants and scale-up into production scale. Overview over methods for the economic, technical evaluation of processes and the preparation of business concepts.

Module Grade Calculation

50 % oral examination, 50 % project work.

Additional Information

As part of the project study a visit to the IKFT and the bioliq plant at the Campus North is intended, as well as an excursion to an industrial company.

Workload

Lecture and Exercise:

Attendance time: 45 h

Self-study: 90 h

Exam preparation: 45 h

Project work: 180 h

T-CIWVT-115002	Process Engineering in Excel		3 CP	Bächler

Assessment

Learning control is a completed coursework (ungraded): Processing, documentation, and presentation/discussion of the solution to a programming task.

Prerequisites

None.

Competence Goal

The main goal of the course is to learn and apply engineering-oriented methods by application of the spreadsheet program Excel. The use of Excel by the students is already encouraged during the lectures, and time is designated for self-directed problem solving. After completing the course, students are able to solve and visualize basic chemical engineering problems using Excel. To this end, students learn how to use various tools in Excel (e.g. Solver, regression analysis, VBA programming, etc.).

Content

Advantages of working with Excel is shown using direct examples from the fundamentals of process and chemical engineering. The following list provides an overview of the content of the lecture, covering both Excel-related skills and tools as well as the respective chemical engineering examples:

- Fundamentals of calculations and chart creation in spreadsheet programs using particle size distributions / particle size analysis (example: MVT)
- Numerical solution of equations using the Excel Solver based on model equations that cannot be solved analytically, applied to the determination of the drag coefficient of spheres (example: MVT)
- Linear regression of experimental data and model development in Excel using vapor pressure equations and adsorption isotherms (examples: TVT)
- Numerical solution of differential equations based on reaction kinetics (example: CVT)
- Fundamentals of VBA programming for solving more advanced chemical engineering problems (e.g. modeling baghouse filters for gas cleaning, layout of absorption processes, heat exchanger calculations, thermodynamic properties of humid air, etc.).

Module Grade Calculation

Ungraded.

Additional Information

The course will not take place in the last week of April/May. The exact lecture blocks will be announced.

Workload

- Lecture: 30 h
- Homework & Completing voluntary exercises: 30 h
- Exam preparation: 30 h

Recommendations

Active participation in the lecture is recommended. You are welcome to bring your own laptop with Excel installed.

Election Notes

Students have to self-record the achievements obtained in the Supplementary Studies on Science, Technology and Society in their study plan. FORUM (formerly ZAK) records the achievements as "non-assigned" under "ÜQ/SQ-Leistungen". Further instructions on self-recording of achievements can be found in the FAQ at <https://campus.studium.kit.edu/> and on the FORUM homepage at <https://www.forum.kit.edu/english/>. The title of the examination and the amount of credits override the modules placeholders.

If you want to use FORUM achievements for both your Interdisciplinary Qualifications and for the Supplementary Studies, please record them in the Interdisciplinary Qualifications first. You can then get in contact with the FORUM study services (stg@forum.kit.edu) to also record them in your Supplementary Studies.

In the Advanced Unit you can choose examinations from three subject areas: "About Knowledge and Science", "Science in Society" and "Science in Social Debates". It is advised to complete courses from each of the three subject areas in the Advanced Unit.

To self-record achievements in the Advanced Unit, you have to select a free placeholder partial examination first. The placeholders' title do *not* affect which achievements the placeholder can be used for!

ID	Name	Term offered	Credits	Lecturers

Mandatory				
T-FORUM-113587	Registration for Certificate Issuance - Supplementary Studies on Science, Technology and Society	WT+ST	0 CP	Mielke, Myglas

Assessment

The monitoring is explained in the respective partial achievement.

They are composed of:

- Protocols
- Reflection reports
- Presentations
- Preparation of a project work
- An individual term paper
- An oral examination
- A written exam

Upon successful completion of the supplementary studies, graduates receive a graded report and a certificate issued by the FORUM.

Prerequisites

The course is offered during the course of study and does not have to be completed within a defined period. Enrollment is required for all assessments of the modules in the supplementary studies.

Participation in the supplementary studies is regulated by § 3 of the statutes. KIT students register for the supplementary studies by selecting this module in the student portal and booking a performance themselves. Registration for courses, assessments, and exams is regulated by § 8 of the statutes and is usually possible shortly before the start of the semester.

The course catalog, module description (module manual), statutes (study regulations), and guidelines for creating the various written performance requirements can be downloaded from the FORUM homepage at <https://www.forum.kit.edu/begleitstudium-wtg.php>.

Registration and exam modalities**PLEASE NOTE:**

Registration on the FORUM, i.e. additionally via the module selection in the student portal, enables students to receive up-to-date information about courses or study modalities. In addition, registering on the FORUM ensures that you have proof of the credits you have earned. As it is currently (as of winter semester 24-25) not yet possible to continue additional credits acquired in the Bachelor's programme electronically in the Master's programme, we strongly advise you to digitally secure the credits you have earned by archiving the Bachelor's transcript of records yourself and by registering on FORUM.

In the event that a transcript of records of the Bachelor's certificate is no longer available - we can only assign the achievements of registered students and thus take them into account when issuing the certificate.

Competence Goal

Graduates of the Supplementary Studies on Science, Technology, and Society gain a solid foundation in understanding the interplay between science, the public, business, and politics. They develop practical skills essential for careers in media, political consulting, or research management. The program prepares them to foster innovation, influence social processes, and engage in dialogue with political and societal entities. Participants are introduced to interdisciplinary perspectives, encompassing social sciences and humanities, to enhance their understanding of science, technology, and society. The teaching objectives of this supplementary degree program include equipping participants with both subject-specific knowledge and insights from epistemological, economic, social, cultural, and psychological perspectives on scientific knowledge and its application in various sectors. Students are trained to critically assess and balance the implications of their actions at the intersection of science and society. This training prepares them for roles as students, researchers, future decision-makers, and active members of society.

Through the program, participants learn to contextualize in-depth content within broader frameworks, independently analyze and evaluate selected course materials, and communicate their findings effectively in both written and oral formats. Graduates are adept at analyzing social issues and problem areas, reflecting on them critically from a socially responsible and sustainable standpoint.

Content

The Supplementary Studies on Science, Technology and Society can be started in the 1st semester of the enrolled degree programme and is not limited in time. The wide range of courses offered by FORUM makes it possible to complete the program usually within three semesters. The supplementary studies comprises 16 or more credit points (LP). It consists of **two modules: the Basic Module (4 LP) and the Advanced Module (12 LP)**.

The **basic Module** comprises the compulsory courses 'Lecture Series Supplementary Studies on Science, Technology and Society' and a basic seminar with a total of 4 LP.

The **Advanced Module** comprises courses totalling 12 LP in the humanities and social sciences subject areas 'On Knowledge and Science', 'Science in Society' and 'Science in Public Debates'. The allocation of courses to the accompanying study programme can be found on the homepage <https://www.forum.kit.edu/wtg-aktuelland> in the printed FORUM course catalogue.

The 3 thematic subject areas:

Subject area 1: About Knowledge and Science

This is about the internal perspective of science: students explore the creation of knowledge, distinguishing between scientific and non-scientific statements (e.g., beliefs, pseudo-scientific claims, ideological statements), and examining the prerequisites, goals, and methods of knowledge generation. They investigate how researchers address their own biases, analyze the structure of scientific explanatory and forecasting models in various disciplines, and learn about the mechanisms of scientific quality assurance.

After completing courses in the "Knowledge and Science" area, students can critically reflect on the ideals and realities of contemporary science. They will be able to address questions such as: How robust is scientific knowledge? What are the capabilities and limitations of predictive models? How effective is quality assurance in science, and how can it be improved? What types of questions can science answer, and what questions remain beyond its scope?

Subject area 2: Science in Society

This focuses on the interactions between science and different areas of society, such as how scientific knowledge influences social decision-making and how social demands impact scientific research. Students learn about the specific functional logics of various societal sectors and, based on this understanding, estimate where conflicts of goals and actions might arise in transfer processes—for example, between science and business, science and politics, or science and journalism. Typical questions in this subject area include: How and under what conditions does an innovation emerge from a scientific discovery? How does scientific policy advice work? How do business and politics influence science, and when is this problematic? According to which criteria do journalists incorporate scientific findings into media reporting? Where does hostility towards science originate, and how can social trust in science be strengthened?

After completing courses in the "Science in Society" area, students can understand and assess the goals and constraints of actors in different societal sectors. This equips them to adopt various perspectives of communication and action partners in transfer processes and to act competently at various social interfaces with research in their professional lives.

Subject area 3: Science in Public Debates

The courses in this subject area provide insights into current debates on major social issues such as sustainability, digitalization, artificial intelligence, gender equality, social justice, and educational opportunities. Public debates on complex challenges are often polarized, leading to oversimplifications, defamation, or ideological thinking. This can hinder effective social solution-finding processes and alienate people from the political process and from science. Debates about sustainable development are particularly affected, as they involve a wide range of scientific and technological knowledge in both problem diagnosis (e.g., loss of biodiversity, climate change, resource consumption) and solution development (e.g., nature conservation, CCS, circular economy).

By attending courses in "Science in Public Debates," students are trained in an application-oriented way to engage in factual debates—exchanging arguments, addressing their own prejudices, and handling contradictory information. They learn that factual debates can often be conducted more deeply and with more nuance than is often seen in public discourse. This training enables them to handle specific factual issues in their professional lives independently of their own biases and to be open to differentiated, fact-rich arguments.

Supplementary credits:

Additional LP (supplementary work) totalling a maximum of 12 LP can also be acquired from the complementary study programme (see statutes for the WTG complementary study programme § 7). § 4 and § 5 of the statutes remain unaffected by this. These supplementary credits are not included in the overall grade of the accompanying study programme. At the request of the participant, the supplementary work will be included in the certificate of the accompanying study programme and marked as such. Supplementary coursework is listed with the grades provided for in § 9.

Module Grade Calculation

The overall grade of the supplementary course is calculated as a credit-weighted average of the grades that were achieved in the advanced module.

Additional Information

Climate change, biodiversity crisis, antibiotic resistance, artificial intelligence, carbon capture and storage, and gene editing are just a few areas where science and technology can diagnose and address numerous social and global challenges. The extent to which scientific findings are considered in politics and society depends on various factors, such as public understanding and trust, perceived opportunities and risks, and ethical, social, or legal considerations.

To enable students to use their expertise as future decision-makers in solving social and global challenges, we aim to equip them with the skills to navigate the interfaces between science, business, and politics competently and reflectively. In the Supplementary Studies, they acquire foundational knowledge about the interactions between science, technology, and society.

They learn:

- How reliable scientific knowledge is produced,
- how social expectations and demands influence scientific research, and
- how scientific knowledge is adopted, discussed, and utilized by society.

The program integrates essential insights from psychology, philosophy, economics, social sciences, and cultural studies into these topics. After completing the supplementary studies programme, students can place the content of their specialized studies within a broader social context. This prepares them, as future decision-makers, to navigate competently and reflectively at the intersections between science and various sectors of society, such as politics, business, or journalism, and to contribute effectively to innovation processes, public debates, or political decision-making.

Workload

The workload is made up of the number of hours of the individual modules:

- Basic Module approx. 120 hours
- Advanced Module approx. 360 hours
- > Total: approx. 480 hours

In the form of supplementary services, up to approximately 360 hours of work can be added.

Recommendations

It is recommended to complete the supplementary study program in three or more semesters, beginning with the lecture series on science, technology, and society in the summer semester. Alternatively, you can start with the basic seminar in the winter semester and then attend the lecture series in the summer semester.

Courses in the Advanced Module can be taken simultaneously. It is also advised to complete courses from each of the three subject areas in the advanced unit.

ID	Name	Term offered	Credits	Lecturers
Mandatory				
T-CIWVT-101885	Thermal Process Engineering		6 CP	Zeiner

Assessment

Learning control is a written examination lasting 180 minutes.

Prerequisites

None

Competence Goal

Students can explain fundamental knowledge in the field of Thermal Separations. Emphasis is laid on the difference between methodological tools and their application for the description of selected unit operations. They can work on standard types of problems in the field of Thermal Process Engineering. They can solve it mathematically and can apply methodological tools adequate. Furthermore, the students can quantitatively apply these tools and skills to processes and problems which are new to them.

Content

In this course, the fundamentals of thermal process engineering are deepened and systematically applied to the design of thermal separation processes. Building on the underlying physical and chemical principles, material, energy, and phase equilibria are discussed and used to describe and evaluate real separation tasks. The focus is on the thermal separation processes of distillation and rectification, absorption, extraction, crystallization, and adsorption. For each process, the operating principles, typical apparatus configurations, and basic design approaches are introduced.

Module Grade Calculation

The mark of the module is equal to the mark of the written examination.

Workload

- Attendance time (lecture and tutorials): 60 hrs
- Self study: 40 hrs
- Examination preparation: 80 hrs

Assessment

The learning control consists of two partial achievements:

1. Written examination lasting 120 min
2. Prerequisite for participation: Completed coursework;
2 of 3 compulsory exercises have to be approved

Prerequisites

Before taking the written exam, the completed coursework must be passed.

Competence Goal

Students are able to analyse and to design energy conversion processes by applying the first and second law of thermodynamics. They understand the behaviour of real pure substances, and they are able to explain thermodynamic processes with and without phase change by means of state diagrams and process schemes.

Content

Fundamental terms; thermodynamic equilibrium and temperature; properties and equation of state for ideal gases; energy and first law for closed systems; balances for open systems; entropy and thermodynamic potentials; second law; equations of state for pure component caloric properties; phase change behavior of pure component systems and state diagrams; thermodynamic cycles for power generation, refrigeration and heat pumps; exergy

Module Grade Calculation

The module grade is the grade of the written examination.

Workload

Lectures and exercises: 70 h

Homework: 80 h

Preparation of Examination : 60 h

2 of 3 compulsory exercises have to be approved

Prerequisites

Before taking the written exam, the completed coursework must be passed.

Competence Goal

Students understand the behavior of real gases, gas-vapor mixtures, simple real mixtures, chemical equilibria of ideal gases. They are able to explain and to analyse corresponding thermodynamic processes by means of state diagrams and process schemes. They are able to analyse and to design these processes based on balance equations and phase equilibria.

Content

Real gases and liquification of gases; thermodynamic potentials; characterization of mixtures; mixtures of ideal gases; gas-vapor mixtures and processes with humid air; phase equilibria and phase diagrams, laws of Raoult and Henry, liquid-liquid equilibria; enthalpy of mixtures; general description of mixtures and chemical potential; reaction equilibria of ideal gases; fundamentals of combustion processes.

Assessment

Learning assessment is carried out by written examination of 120 minutes length.

Prerequisites

A "pass" result on the pre-requisite in AM III is a requirement for registration for the examination in AM III.

Modeled Prerequisites

The following conditions have to be fulfilled:

1. The module component [T-MATH-100527 - Tutorial Advanced Mathematics III](#) must have been passed.

T

5.5 Module component: Air Pollution Control [T-CIWVT-113046]

Coordinators: Prof. Dr.-Ing. Achim Dittler
Organisation: KIT Department of Chemical and Process Engineering
Part of: [M-CIWVT-106448 - Air Pollution Control](#)

Part of: [M-CIWVT-106580 - Bachelor's Thesis](#)

Type	Credits	Grading	Version
Final Thesis	12 CP	graded	1

Final Thesis

This module component represents a final thesis. The following periods have been supplied:

Submission deadline 4 months

Maximum extension period 1 months

Correction period 6 weeks

This thesis requires confirmation by the examination office.

T**5.12 Module component: Basic Seminar Supplementary Studies on Science, Technology and Society - Self Registration [T-FORUM-113579]**

Coordinators: Dr. Christine Mielke
Christine Myglas

Organisation: General Studies. Forum Science and Society (FORUM)

Part of: [M-FORUM-106753 - Supplementary Studies on Science, Technology and Society](#)

Type	Credits	Grading	Term offered	Expansion	Version
Coursework	2 CP	pass/fail	Each summer term	1 semesters	1

Assessment

Study achievement in the form of a presentation or a term paper or project work in the selected course.

Prerequisites

None

Self Service Assignment of Supplementary Studies

This module component can be used for self service assignment of grades acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendations

It is recommended that the basic seminar be completed during the same semester as the lecture series "Science in Society". If it is not possible to attend the lecture series and the basic seminar in the same semester, the basic seminar can also be attended in the semesters before the lecture series.

However, attending courses in the advanced unit before attending the basic seminar should be avoided.

Type	Credits	Grading	Term offered	Version
Examination of another type	3 CP	graded	Each term	1

Assessment

Another type of examination assessment under § 5, section 3 involves a presentation, term paper, or project work within the chosen course.

Prerequisites

None

Self Service Assignment of Supplementary Studies

This module component can be used for self service assignment of grades acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendations

The contents of the basic module are helpful. The basic module should be completed or attended in parallel, but not after the advanced module.

The reading recommendations for primary and specialist literature are determined individually by the respective lecturers according to the subject area and course.

Additional Information

This placeholder can be used for any achievement in the Advanced Unit of the Supplementary Studies.

In the Advanced Module, students can choose their own individual focus, e.g. sustainable development, data literacy, etc. The focus should be discussed with the module coordinator at the FORUM.

T**5.32 Module component: Elective Specialization Supplementary Studies on Science, Technology and Society / Science in Public Debates - Self Registration [T-FORUM-113582]****Coordinators:** Dr. Christine Mielke

Christine Myglas**Organisation:** General Studies. Forum Science and Society (FORUM)**Part of:** [M-FORUM-106753 - Supplementary Studies on Science, Technology and Society](#)

Type	Credits	Grading	Term offered	Version
Examination of another type	3 CP	graded	Each term	1

Assessment

Another type of examination assessment under § 5, section 3 involves a presentation, term paper, or project work within the chosen course.

Prerequisites

None

Self Service Assignment of Supplementary Studies

This module component can be used for self service assignment of grades acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendations

The contents of the basic module are helpful. The basic module should be completed or attended in parallel, but not after the advanced module.

The reading recommendations for primary and specialist literature are determined individually by the respective lecturers according to the subject area and course.

Additional Information

This placeholder can be used for any achievement in the Advanced Unit of the Supplementary Studies.

Assessment

Success control takes place in the form of other types of examination. It consists of four experiments and written reports are assessed in each case. The module grade is based on the overall impression.

The successfully completed experiments together form an examination unit. If you fail, you have to repeat the internship in its entirety.

Prerequisites

see module

Additional Information

Participation in the safety instruction and the methods course is mandatory.

Type	Credits	Grading	Term offered	Version
Coursework (practical)	1 CP	pass/fail	Each winter term	1

Prerequisites

Written exam "General Chemistry and Chemistry of Aqueous Solutions" must be passed.

Modeled Prerequisites

The following conditions have to be fulfilled:

1. The module component [T-CIWVT-101892 - General Chemistry and Chemistry of Aqueous Solutions](#) must have been passed.

Workload

120 hours

T**5.68 Module component: Laboratory Work: Microbiology for Engineers [T-CIWVT-115301]****Coordinators:** Dr. Anke Neumann**Organisation:** KIT Department of Chemical and Process Engineering**Part of:** [M-CIWVT-106427 - Basic Practical Course in Natural Sciences](#)

Type	Credits	Grading	Term offered	Version
Coursework (practical)	3 CP	pass/fail	Each winter term	1

Assessment

Completed Coursework (ungraded): Practical course in microbiology lasting 1 week.

The practical course is passed under the following conditions:

- a) Passing the introductory colloquium
- b) Participation in all experiments
- c) Passing the practical course protocols

Prerequisites

It is recommended to complete the practical part of General Chemistry first, but this is not a prerequisite.

T

5.69 Module component: Lecture Series Supplementary Studies on Science, Technology and Society - Self Registration [T-FORUM-113578]

Legend:  Online,  Blended (On-Site/Online),  On-Site,  Cancelled

Assessment

Active participation, learning protocols, if applicable.

Prerequisites

None

Self Service Assignment of Supplementary Studies

This module component can be used for self service assignment of grades acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendations

It is recommended that you complete the lecture series "Science in Society" before attending events in the advanced module and in parallel with attending the basic seminar.

If it is not possible to attend the lecture series and the basic seminar in the same semester, the lecture series can also be attended after attending the basic seminar.

However, attending events in the advanced module before attending the lecture series should be avoided.

Additional Information

The basic module consists of the lecture series "Science in Society" and the basic seminar. The lecture series is only offered during the summer semester.

The basic seminar can be attended in the summer or winter semester.

T

5.91 Module component: Registration for Certificate Issuance - Supplementary Studies on Science, Technology and Society [T-FORUM-113587]

Coordinators: Dr. Christine Mielke
Christine Myglas

Organisation: General Studies. Forum Science and Society (FORUM)

Part of: [M-FORUM-106753 - Supplementary Studies on Science, Technology and Society](#)

Type	Credits	Grading	Term offered	Version
Coursework	0 CP	pass/fail	Each term	1

Prerequisites

In order to register, it is mandatory that the basic module and the advanced module have been completed and that the grades for the partial performances in the advanced module are available.

Registration as a partial achievement means the issue of a certificate.
