Module Handbook
Bioengineering Master 2016 (Master of Science (M.Sc.))

SPO 2016

Summer semester 2026

Date: 26/02/2026

KIT DEPARTMENT OF CHEMICAL AND PROCESS ENGINEERING

Table Of Contents

1 General Information

1.1 Study program details

KIT-Department	KIT Department of Chemical and Process Engineering
Academic Degree	Master of Science (M.Sc.)
Examination Regulations Version	2016
Regular semesters	4 semesters
Maximum semesters	8 semesters
Credits	120
Language	German, some courses in English
Grade calculation	Weighted average by credits
Additional Information	Link to study program **www.ciw.kit.edu** Department **https://www.ciw.kit.edu/1630.php** Business unit Studium und Lehre **https://www.sle.kit.edu/vorstudium/master-bioingenieurwesen.php**

1.2 Qualification Goals

The focus of bioengineering is on process engineering in the context of an industrial, engineering-driven application of biological and biotechnological principles. In this way, bioengineering differs from natural sciences programs, biotechnology or molecular biotechnology, which deal primarily with the utilization of biological principles. Bioengineers make a crucial contribution to the development of interdisciplinary approaches for creating an energetically and materially sustainable, post-fossil economy.

The Master’s program provides extensive detailed knowledge in engineering, mathematics and natural sciences, which enables graduates to apply process engineering principles to biological material systems. The Master’s degree qualifies graduates to work scientifically and act responsibly within their professional activity and in the society.

Based on the Bachelor’s program, the compulsory program in the first year focuses on advanced methodical and qualified fundamental knowledge with a main focus on biotechnological procedures and processes that make an industrial utilization of biological systems possible. This knowledge is further advanced within two specialized courses elected by the students. One of these specialized courses has to deal with aspects of biotechnological material systems.

In the scope of the Master’s thesis, students prove their ability to work on a problem within their field of expertise independently and in a defined time frame using scientific methods that correspond to the current state of research. In addition, an internship provides insight into the fields of activity of an engineer.

Graduates are qualified to analyze and solve problems using scientific methods and to abstract and formulate complex problems. They are also able to develop new methods, processes and products. Graduates are qualified to combine knowledge from various professional areas and to familiarize themselves systematically with new tasks. They can reflect non-technical impacts of engineering activities and consider those impacts by acting responsibly.

1.3 Acceptance Criterias

Whether admission is possible depends on your previous academic knowledge, i.e. the content of the Bachelor's degree course you have completed. You must provide evidence of the following academic achievements from your previous studies:

- Fundamentals of Mathematics and Natural Sciences 35 CP
- Fundamentals of Scientific Engineering 15 CP
- Thermodynamics and Transport processes 15 CP
- Fundamentals of Process Engineering 12 CP
- Biology and Biotechnology 15 CP
- Bachelor's thesis or equivalent 12 CP

If up to 15 CP are missing in a maximum of two of these areas, admission is possible on condition that the missing work is completed within the first three Master's semesters. Further details on the application can be found in the admission regulations.

https://www.ciw.kit.edu/download/2024-07-29_MA-BIW-Zugangssatzung.pdf

1.4 Studies and Examination Regulations

The legal basis for the study program and the exmaminations is the
„Studien- und Prüfungsordnung des Karlsruher Instituts für Technologie (KIT) für den Masterstudiengang Bioingenieurwesen“
(Study and Examination Regulations of the Karlsruhe Institute of Technology (KIT) for the Master Course of Studies in Bioengineering)
dated 03 May 2016, amended on 24 February 2020.

https://www.sle.kit.edu/downloads/AmtlicheBekanntmachungen/2016_AB_032.pdf

1.5 Organizational issues

Recognition of achievements according to § 19 SPO

A request for recognition of courses that were completed

- At another university
- Abroad
- Outside the higher education system
- Within the scope of the master transfer account

can be submitted to the Master Examination Board within one semester. There, if necessary after consultation with the subject representative, it will be determined whether the performance is equivalent to a performance envisaged in the curriculum of the course of study and can be recognised. Achievements completed as part of a semester abroad can also be recognized at a later date.
If you have already completed a professional internship or practical semester, you can apply for recognition directly at the Internship Office.

Registration for examinations in the specialized courses/ in the technical supplement course

Before registering for module examinations in Specialized Courses subjects as well as in the Technical Supplement Course, a study plan must be submitted to the Master's Examination Board (Marion Gärtner) for approval. Only then are the modules added to the study schedule and online registration in the student portal is possible. For more information, see the faculty website at

https://www.ciw.kit.edu/1619.php

Subsequent changes to the study plan must also be requested from Marion Gärtner.

Additional achievements and interdisciplinary qualification

Additional credits and interdisciplinary qualifications cannot always be registered directly in the CAS system (e.g. some modules from another faculty). In any case, you must contact Marion Gärtner before the examination.

Exception:
interdisciplinary qualification at the House of Competence (HoC) or Language Centre (SPZ) or FORUM

If the Soft Skill Qualification is taken at the HoC or Language Centre or FORUM, then no certificate of approval is required for an examination achievement, as the achievements are automatically posted in the CAS system under "unallocated credits".

If you want to credit a performance that is listed under " unallocated credits", you have submit a form to the Masters Examination Board.

For forms, please refer to the website of the KIT Faculty of Chemical and Process Engineering **https://www.ciw.kit.edu/1619.php**

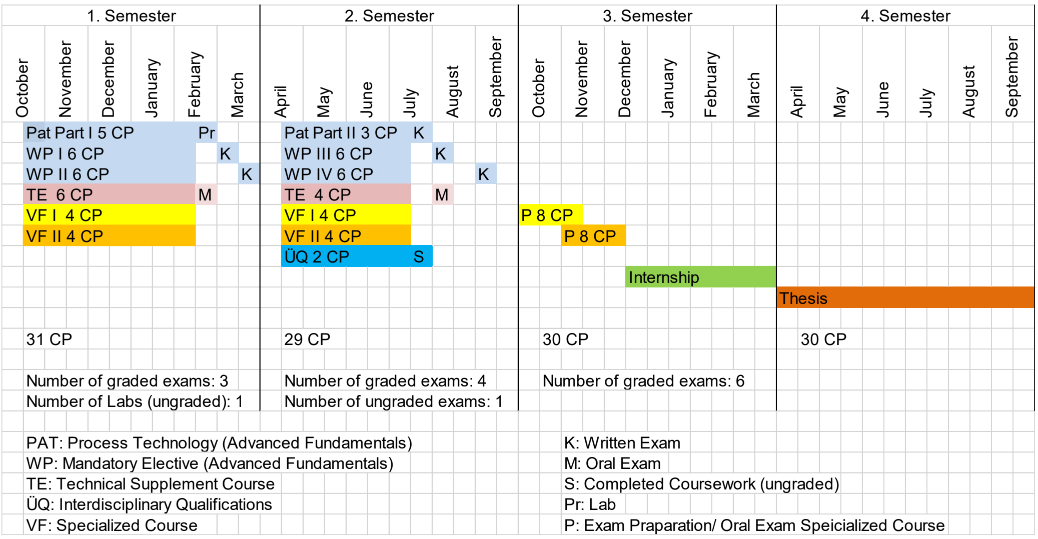
Subject and module overview

Subject	Module	Courses	Responsible	Credits
Advanced Fundamentals	Mandatory: Process Technology	Lecture/ Exercise	Scheiff	8
		Praktikum		
	Elective: 4 Modules/ 24 Credits from:			
	Biotechnological Production	Lecture	Holtmann	6
		Seminar		
	Biopharmaceutical Purification Processes	Lecture/ Exercise	Hubbuch	6
	Bioprocess Development	Lecture/ Exercise	Grünberger	6
	Membrane Technologies in Water Treatment	Lecture/ Exercise	Horn	6
	Alternatively: Maximum 2 elective modules from the Advanced Fundamentals of the Master’s program Chemical and Process Engineering.			6
Study plan: Approval of the examination board required prior to registration for examinations in specialized courses and modules in the technical supplement courses!				
Specialized Course I	3 elective modules			16
Specialized Course II	3 elective modules			16
Technical Supple-ment Course	2 – 3 elective modules			10
Soft Skills	e. g. offers of the House of Competence of FORUM			2
	Internship			14
	Master thesis			30

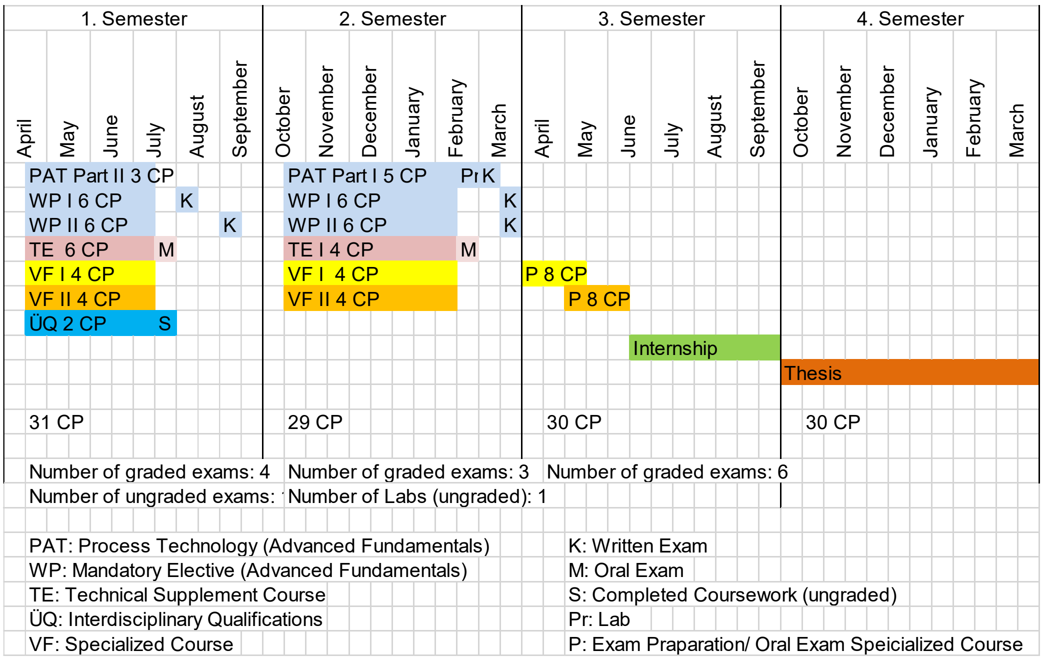
Recommended course of study

The study program can be started in the summer semester as well as in the winter semester. In the first two semesters it is recommended to complete the modules of the subjects Advanced Fundamentals, Technical Supplement Course and Soft Skill Qualifications as well as to attend lectures in the Specialized Courses. The first half of the third semester is then used to prepare for the specialization examinations, some of which are offered as block examinations (all modules of a specialized course in one common date). Following the specialization examinations, the p internship can be completed. The master's thesis is written in the fourth semester.

Start in winter semester



Start in summer semester



MODULE IN ENGLISCHER SPRACHE

(English Courses)

• Additive Manufacturing for Process Engineering	6 LP	SS
• Advanced Methods in Nonlinear Control	4 LP	SS
• Alternative Protein Technologies	4 LP	SS
• Batteries, Fuel Cells and Electrolysis	6 LP	WS
• Biofilm Systems	4 LP	SS
• Bioprocess Scale-Up	4 LP	WS
• Biosensors	4 LP	SS/WS
• Chemical Hydrogen Storage	4 LP	WS
• Circular Economy Water, Energy, Environment: Research Proposal Preparation	5 LP	SS
• Computational Fluid Dynamics and Simulation Lab	4 LP	SS
• Computer-Aided Reactor Design	6 LP	WS
• Cryogenic Engineering	6 LP	WS
• Data-Based Modeling and Control	6 LP	WS
• Design of a Jet Engine Combustion Chamber	6 LP	WS
• Digital Design in Process Engineering	6 LP	WS
• Electrocatalysis	6 LP	SS
• Electromagnetic Energy in Process Engineering	6 LP	WS
• Energy from Biomass	6 LP	SS/WS
• Environmental Biotechnology	4 LP	WS
• Estimator and Observer Design	6 LP	WS
• Extrusion Technology in Food Processing	4 LP	WS
• Fundamentals of Water Quality	6 LP	WS
• Green Ammonia	4 LP	SS
• Industrial Wastewater Treatment	4 LP	SS
• Innovation Management for Products and Processes in the Chemical Industry	4 LP	SS
• Innovative Concepts for Formulation and Processing of Printable Materials	6 LP	WS
• Introduction to Numerical Simulation of Reacting Flows	8 LP	WS
• Laboratory Work in Combustion Technology	4 LP	SS
• Liquid Transportation Fuels	6 LP	WS
• Membrane Materials & Processes Research Masterclass	6 LP	WS
• Membrane Technologies in Water Treatment	6 LP	SS
• Microsystems in Bioprocess Engineering	4 LP	SS
• Modern Concepts in Catalysis: From Science to Engineering	4 LP	SS
• Nonlinear Process Control	6 LP	WS
• Numerical Methods in Fluidmechanics	4 LP	SS
• Numerical Simulation of Reacting Multiphase Flows	8 LP	SS
• Optimal and Model Predictive Control	6 LP	SS
• Physical Foundations of Cryogenics	6 LP	SS
• Power-to-X – Key Technology for the Energy Transition	6 LP	SS/WS
• Practical Course in Water Technology	4 LP	WS
• Principles of Constrained Static Optimization	4 LP	WS
• Reactor Modeling with CFD	6 LP	SS
• Single-Cell Technologies	4 LP	WS
• Water Technology	6 LP	WS

Bachelor-Courses

• Catalysts for the Energy Transition	5 LP	SS

4 Study Program Structure

Mandatory	
Master's Thesis	30 CP
Advanced Fundamentals	32 CP
Technical Supplement Course	10 CP
Specialized Course I	16 CP
Internship	14 CP
Voluntary	
Additional Examinations *This field will not influence the calculated grade of its parent.*	

4.1 Master's Thesis

Credits
30

Mandatory				
M-CIWVT-104526	Master's Thesis	DE/EN	WS+SS	30 CP

4.2 Advanced Fundamentals

Credits
32

Election notes
Compulsory module:

- Process Technology (8 credits)

Compulsory elective modules:

- Four more modules of 6 credits each from the compulsory elective block "BIW"
- Alternatively: Up to two modules from the compulsory elective block "CIW"

Mandatory				
M-CIWVT-104374	Process Technology	DE	WS+SS	8 CP
BIW (Election: at least 2 items)				
M-CIWVT-103065	Biopharmaceutical Purification Processes	DE	WS	6 CP
M-CIWVT-105380	Membrane Technologies in Water Treatment *First usage possible from Apr 01, 2021.*	EN	SS	6 CP
M-CIWVT-106297	Bioprocess Development *First usage possible from Apr 01, 2023.*	EN	SS	6 CP
M-CIWVT-107357	Process and Plant Design in Biotechnology *First usage possible from Oct 01, 2025.*	DE	WS	6 CP
CIW (Election: at most 2 items)				
M-CIWVT-103058	Thermodynamics III	DE	WS	6 CP
M-CIWVT-103072	Computational Fluid Dynamics	DE	WS	6 CP
M-CIWVT-104378	Particle Technology	DE	SS	6 CP
M-CIWVT-104383	Kinetics and Catalysis	DE	SS	6 CP
M-CIWVT-107039	Thermal Process Engineering II *First usage possible from Apr 01, 2025.*	DE	SS	6 CP

4.3 Technical Supplement Course

Credits
10

Examinations

Learning control in all modules usually is an oral examination according to Section 4 Paragraph 2 no. 2 of the Studies and Examination Regulations of approx. 30 minutes. For information on the type of examination, please refer to the module descriptions.

Please note: Sometimes a different examination duration is indicated for modules of the specialized courses. Especially in specialized courses that are completed with a block examination of all modules, the examination duration for the individual modules is often shorter. In the Technical Supplement Course, the examination duration usually is 30 minutes!

Election notes

In the Technical Supplement Course two modules should be chosen. In addition to modules listed below, modules from other KIT Departments can also be taken after the approval of the Master Examination Board.

It is recommended to choose modules from specialized courses which are NOT part of the two selected specialized courses.

Election regulations

Elections in this field require confirmation.

Technical Supplement Course (Election: at least 10 credits)				
M-CIWVT-105407	Additive Manufacturing for Process Engineering *First usage possible from Apr 01, 2020.*	EN	SS	6 CP
M-CIWVT-106715	Advanced Methods in Nonlinear Process Control *First usage possible from Apr 01, 2024.*	DE	SS	4 CP
M-CIWVT-106661	Alternative Protein Technologies *First usage possible from Apr 01, 2024.*	EN	SS	4 CP
M-CIWVT-106823	Applied Mass Transfer - Energy Systems and Thin Films *First usage possible from Oct 01, 2024.*	DE	WS	6 CP
M-CIWVT-104286	Design of Micro Reactors	DE	WS	6 CP
M-ETIT-107005	Batteries, Fuel Cells, and Electrolysis *First usage possible from Oct 01, 2025.*	EN	WS	6 CP

4.4 Specialized Course I

Credits
16

IMPORTANT: Before you can take exams in the specialized courses, the Master Examination Board has to approve your study plan. The selected specialized courses and modules will then be entered in the Campus Management System so that you can register for the exams.

Examinations

Learning control for each module of the specialized course is an oral examination according to Section 4 Paragraph 2 no. 2 of the Studies and Examination Regulations. In exceptional cases, a written examination will take place (see module description).

Some specialized courses are concluded with a block examination:
All modules are examined in a joint oral examination (duration approx. 1 h). Each module is graded separately.

The grades of the modules of a specialized course are included in the subject grade with a weight proportional to the designated credits of the modules.

Election notes
Two specialized courses (specialized course I and specialized course II*) with a scope of 16 credits each are selected. In the master's program Bioengineering, at least one of the following specialized courses has to be selected:

- Biopharmaceutical Process Engineering
- Food Process Engineering
- New Bio-Production Systems - Electro-Biotechnology
- Bioresource Engineering
- Water Technology

* In the module handbook, only specialized course I is described. The same regulations are valid for specialized course II.

Specialized Course I (Election: 1 item)	
Applied Rheology	16 CP
Automation and Process Systems Engineering *First usage possible from Apr 01, 2023.*	16 CP
Biopharmaceutical Process Engineering	16 CP
Fuel Technology	16 CP
Chemical Process Engineering	16 CP
Energy Process Engineering	16 CP
Entrepreneurship in Process Engineering *First usage possible from Oct 01, 2022.*	16 CP
Gas Particle Systems	16 CP
Food Process Engineering	16 CP
Modelling and Simulation *First usage possible from Oct 01, 2025.*	16 CP
New Bio-Production Systems - Electro-Biotechnology *First usage possible from Oct 01, 2023.*	16 CP
Bioresource Engineering	16 CP
Mechanical Process Engineering	16 CP
Technical Thermodynamics	16 CP
Thermal Process Engineering	16 CP
Environmental Process Engineering	16 CP
Combustion Technology	16 CP
Water Technology	16 CP

4.4.1 Applied Rheology

Part of: Specialized Course I

Credits
16

Type of examination: Oral examination of the module combination

Election notes
One of the following two modules has to be chosen:

- Rheology of Polymers
- Stability of Disperse Systems

The module "Innovative Concepts for Formulation and Processing of Printable Materials" can only be chosen if none of the modules

- Stability of Disperse Systems
- Rheology of Complex Fluids and Advanced Rheometry

has been chosen.

Case studies in the module "Microfluidics" can be droped. In this case 4 credits are awarded for the module.

Applied Rheology (Election: at least 16 credits)				
M-CIWVT-104329	Rheology of Polymers	DE	SS	4 CP
M-CIWVT-104330	Stability of Disperse Systems	DE	WS	4 CP
M-CIWVT-104331	Rheology of Complex Fluids and Advanced Rheometry	DE	SS	4 CP
M-CIWVT-105993	Innovative Concepts for Formulation and Processing of Printable Materials *First usage possible from Oct 01, 2022.*	EN	WS	4 CP
M-CIWVT-105399	Mixing, Stirring, Agglomeration *First usage possible from Apr 01, 2020.*	DE	SS	6 CP
M-CIWVT-104886	Principles of Ceramic and Powder Metallurgy Processing	DE	WS	4 CP
M-CIWVT-104370	Drying Technology	DE	SS	6 CP
M-CIWVT-104350	Microfluidics	DE	WS	4 CP
M-CIWVT-105205	Microfluidics and Case Studies	DE	WS	6 CP

4.4.2 Automation and Process Systems Engineering

Part of: Specialized Course I

Credits
16

Note regarding usage
First usage possible from Apr 01, 2023.
Type of examination: Oral examination of each module

Election notes
Compulsory module:

- Nonlinear Process Control

In addition, at least one of the following modules has to be chosen:

- Optimal and Model Predictive Control
- Data-Based Modeling and Control
- Control of Distributed Parameter Systems
- Estimator and Observer Design

Automation and Process Systems Engineering (Election: at least 16 credits)				
M-CIWVT-106316	Nonlinear Process Control *First usage possible from Oct 01, 2023.*	DE/EN	WS	6 CP
M-CIWVT-106313	Principles of Constrained Static Optimization *First usage possible from Oct 01, 2023.*	EN	WS	4 CP
M-CIWVT-106317	Optimal and Model Predictive Control	EN	SS	6 CP
M-CIWVT-106319	Data-Based Modeling and Control *First usage possible from Oct 01, 2023.*	EN	WS	6 CP
M-CIWVT-106318	Control of Distributed Parameter Systems	DE/EN	SS	6 CP
M-CIWVT-106320	Estimator and Observer Design *First usage possible from Oct 01, 2023.*	EN	WS	6 CP
M-CIWVT-106715	Advanced Methods in Nonlinear Process Control *First usage possible from Apr 01, 2024.*	DE	SS	4 CP
M-ETIT-105594	Process Analysis: Modeling, Data Mining, Machine Learning	DE	SS	4 CP
M-CIWVT-104973	Digitization in Particle Technology	DE	WS	6 CP
M-CIWVT-107038	Simulation Technologies *First usage possible between Apr 01, 2025 and Sep 30, 2026.*	DE	SS	6 CP
M-CIWVT-107037	Dynamics of Process Engineering Systems *First usage possible from Apr 01, 2025.*	DE	SS	6 CP

4.4.3 Biopharmaceutical Process Engineering

Part of: Specialized Course I

Credits
16

Type of examination: oral/written examination of each module

Election notes
Prerequisite:

- Compulsory elective module "Biopharmaceutical Purification Processes"

One of the following modules must be chosen:

- Formulation of (Bio)pharmaceutical Therapeutics
- Process Modeling in Downstream Processing
- Industrial Aspects in Bioprocess Technology

Biopharmaceutical Process Engineering (Election: at least 16 credits)				
M-CIWVT-103066	Process Modeling in Downstream Processing	DE	SS	4 CP
M-CIWVT-104266	Formulation of (Bio)pharmaceutical Therapeutics	DE	WS	4 CP
M-CIWVT-104273	Commercial Biotechnology	DE	SS	4 CP
M-MACH-100489	BioMEMS - Microsystems Technologies for Life Sciences and Medicine I	DE	WS	4 CP
M-MACH-100490	BioMEMS - Microsystems Technologies for Life Sciences and Medicine II	DE	SS	4 CP
M-MACH-100491	BioMEMS - Microsystems Technologies for Life Sciences and Medicine III	DE	SS	4 CP
M-MACH-102702	Organ Support Systems	DE	SS	4 CP
M-MACH-102720	Principles of Medicine for Engineers	DE	WS	4 CP
M-CIWVT-105412	Industrial Aspects in Bioprocess Technology	DE	SS	4 CP
M-CIWVT-105890	NMR Methods for Product and Process Analysis *First usage possible from Apr 01, 2022.*	DE/EN	WS	4 CP
M-CIWVT-106501	Industrial Bioprocesses *First usage possible from Oct 01, 2023.*	DE	WS	4 CP
M-CIWVT-106563	Production and Development of Cancer Therapeutics *First usage possible from Oct 01, 2023.*	DE	WS	4 CP
M-CIWVT-106835	Data-Driven Process Engineering Models in Python *First usage possible from Oct 01, 2024.*	DE	WS	4 CP

4.4.4 Fuel Technology

Part of: Specialized Course I

Credits
16

Type of examination: Oral examination of each module

Election notes

- The module "Fuel Technology" is mandatory.
- The module "Refinery Technology - Liquid Fuels" can't be chosen if the module "Liquid Transportation Fuels" has been chosen in another subject.

Fuel Technology (Election: at least 16 credits)				
M-CIWVT-103069	Combustion Technology	DE	WS	6 CP
M-CIWVT-103075	High Temperature Process Engineering	DE	SS	6 CP
M-CIWVT-104287	Catalytic Processes in Gas Technologies	DE	SS	4 CP
M-CIWVT-104288	Biomass Based Energy Carriers	DE	WS	6 CP
M-CIWVT-104289	Fuel Technology	DE	WS	6 CP
M-CIWVT-104291	Refinery Technology - Liquid Fuels	DE	SS	6 CP
M-CIWVT-104292	Fluidized Bed Technology	DE	SS	4 CP
M-CIWVT-104352	Process and Plant Safety	DE	SS	4 CP
M-CIWVT-104296	Hydrogen and Fuel Cell Technologies	DE	SS	4 CP
M-CIWVT-106566	Chemical Hydrogen Storage *First usage possible from Oct 01, 2023.*	EN	WS	4 CP
M-CIWVT-107076	Numerical Simulation of Reacting Multiphase Flows *First usage possible from Apr 01, 2025.*	DE/EN	SS	8 CP
M-CIWVT-106676	Introduction to Numerical Simulation of Reacting Flows *First usage possible from Oct 01, 2025.*	EN	WS	8 CP
M-CIWVT-107653	Electrification of the Process Industry *First usage possible from Apr 01, 2026.*	DE	SS	4 CP

4.4.5 Chemical Process Engineering

Part of: Specialized Course I

Credits
16

Type of examination:

- Oral examination of each module
- Exception: Module "Reactor Modeling with CFD": Examination of another type (written report)

Election notes
The module "Chemical Process Engineering II" is mandatory.

The following modules can't be combined:

- Catalytic Micro Reactors
- Design of Micro Reactors

Chemical Process Engineering (Election: at least 16 credits)				
M-CIWVT-104283	Reaction Kinetics	DE	WS	6 CP
M-CIWVT-104284	Sol-Gel-Processes (Including Practical Course)	DE	WS	6 CP
M-CIWVT-104286	Design of Micro Reactors	DE	WS	6 CP
M-CIWVT-104450	Measurement Techniques in Chemical Processing (including practical course)	DE	SS	6 CP
M-CIWVT-104451	Catalytic Micro Reactors	DE	SS	4 CP
M-CIWVT-104489	Sol-Gel Processes	DE	WS	4 CP
M-CIWVT-104490	Measurement Techniques in Chemical Processing	DE	SS	4 CP
M-CIWVT-104491	Catalytic Micro Reactors (including practical course)	DE	SS	6 CP
M-CIWVT-104281	Chemical Process Engineering II	DE	WS	6 CP
M-CIWVT-106537	Reactor Modeling with CFD *First usage possible from Apr 01, 2024.*	EN	SS	6 CP
M-CIWVT-106566	Chemical Hydrogen Storage *First usage possible from Oct 01, 2023.*	EN	WS	4 CP
M-CIWVT-106809	Computer-Aided Reactor Design *First usage possible from Oct 01, 2024.*	DE/EN	WS	6 CP
M-CIWVT-107025	Engineering Heterogeneous Catalysis *First usage possible from Apr 01, 2025.*	DE	SS	6 CP

4.4.6 Energy Process Engineering

Part of: Specialized Course I

Credits
16

Type of examination: Oral examination of each module

Election notes
The module "Fuel Technology" is mandatory unless the specialized course "Fuel Technology" has been chosen as second specialized course.

In addition, one of the following modules has to be chosen:

- Combustion Technology
- High Temperature Process Engineering

Energy Process Engineering (Election: at least 16 credits)				
M-CIWVT-103069	Combustion Technology	DE	WS	6 CP
M-CIWVT-103075	High Temperature Process Engineering	DE	SS	6 CP
M-CIWVT-104288	Biomass Based Energy Carriers	DE	WS	6 CP
M-CIWVT-104289	Fuel Technology	DE	WS	6 CP
M-CIWVT-104292	Fluidized Bed Technology	DE	SS	4 CP
M-CIWVT-104293	Energy Technology	DE	WS	4 CP
M-CIWVT-104295	Combustion and Environment	DE	SS	4 CP
M-CIWVT-104296	Hydrogen and Fuel Cell Technologies	DE	SS	4 CP
M-CIWVT-104297	Measurement Techniques in the Thermo-Fluid Dynamics	DE	WS	6 CP
M-CIWVT-105206	Design of a Jet Engine Combustion Chamber *First usage possible from Oct 01, 2019.*	EN	WS	6 CP
M-CIWVT-104352	Process and Plant Safety	DE	SS	4 CP
M-CIWVT-106676	Introduction to Numerical Simulation of Reacting Flows *First usage possible from Oct 01, 2024.*	EN	WS	8 CP
M-CIWVT-107076	Numerical Simulation of Reacting Multiphase Flows *First usage possible from Apr 01, 2025.*	DE/EN	SS	8 CP

4.4.7 Entrepreneurship in Process Engineering

Part of: Specialized Course I

Credits
16

Note regarding usage
First usage possible from Oct 01, 2022.
Type of examination: written/oral examination of each module

The learning control in the module "Students Innovation Lab" includes a written examination as well as an examination of another type. Examinations in all other modules are oral.

Election notes
The module "Students Innovation Lab" is mandatory.

Within the module "Students Innovation Lab" you can choose between two different projects.

- Project 1: Innovation Project Porous Ceramics from the 3D Printer
- Project 2: Innovation Project Electronic Devices from Printable Conductive Materials

Election regulations
Elections in this field require confirmation.

Entrepreneurship in Process Engineering (Election: at least 16 credits)				
M-CIWVT-104330	Stability of Disperse Systems	DE	WS	4 CP
M-CIWVT-105993	Innovative Concepts for Formulation and Processing of Printable Materials	EN	WS	4 CP
M-CIWVT-106017	Students Innovation Lab	DE/EN	WS	12 CP

4.4.8 Gas Particle Systems

Part of: Specialized Course I

Credits
16

Type of examination: Oral examination of the module combination **OR** oral examination of each module

Election notes
Compulsory module:

- Gas Particle Measurement Technology

The following modules can't be combined:

- Dimensional Analysis of Fluid Mechanic Problems
- Data Analysis and Statistics

Gas Particle Systems (Election: at least 16 credits)				
M-CIWVT-104292	Fluidized Bed Technology	DE	SS	4 CP
M-CIWVT-104337	Gas Particle Measurement Technology	DE	WS	6 CP
M-CIWVT-104339	Nanoparticles – Structure and Function	DE	SS	6 CP
M-CIWVT-104340	Gas Particle Separation Processes	DE	WS	6 CP
M-CIWVT-104345	Data Analysis and Statistics	DE	SS	4 CP
M-CIWVT-104973	Digitization in Particle Technology	DE	WS	6 CP
M-CIWVT-106314	Air Pollution Control - Laws, Technology and Application *First usage possible from Apr 01, 2023.*	DE	SS	4 CP

4.4.9 Food Process Engineering

Part of: Specialized Course I

Credits
16

Type of examination: Oral examination of each module; on request a combined examination is possible.
Exception: The examination in the module "Membrane Technologies in Water Treatment" is a written examination.

Election notes
Compulsory modules:

- Unit Operations and Process Chains for Food of Plant Origin
- Unit Operations and Process Chains for Food of Animal Origin

Food Process Engineering (Election: at least 16 credits)				
M-CIWVT-106698	**Process Engineering for the Production of Food from Plant-Based Raw Materials** *First usage possible from Apr 01, 2024.*	DE	WS	4 CP
M-CIWVT-106699	**Process Engineering for the Production of Food from Animal Origins** *First usage possible from Apr 01, 2024.*	DE	SS	4 CP
M-CIWVT-107679	**Food Processing in Practice** *First usage possible from Apr 01, 2026.*	DE	WS	2 CP
M-CIWVT-104388	**Development of an Innovative Food Product** *First usage possible from Apr 01, 2025.*	DE	WS+SS	6 CP
M-CIWVT-107439	**Emulsification Technology**	DE	SS	4 CP
M-CIWVT-105996	**Extrusion Technology in Food Processing** *First usage possible from Oct 01, 2022.*	EN	WS	4 CP
M-CIWVT-106661	**Alternative Protein Technologies** *First usage possible from Apr 01, 2024.*	EN	SS	4 CP
M-CHEMBIO-104620	**Food Chemistry Basics**	DE	SS	4 CP
M-CIWVT-105933	**Introduction to Sensory Analysis** *First usage possible from Apr 01, 2022.*	DE	SS	2 CP
M-CIWVT-105380	**Membrane Technologies in Water Treatment** *First usage possible from Apr 01, 2020.*	EN	SS	6 CP
M-CIWVT-104370	**Drying Technology**	DE	SS	6 CP
M-CIWVT-105399	**Mixing, Stirring, Agglomeration** *First usage possible from Apr 01, 2020.*	DE	SS	6 CP

4.4.10 Modelling and Simulation

Part of: Specialized Course I

Credits
16

Note regarding usage
First usage possible from Oct 01, 2025.
Type of examination:
Examination of each module according to the module description (oral exam, examination of another type).

Election notes
Mandatory module: Introduction to Numerical Simulation of Reacting Flows

Only one of the modules *Simulation Technologies* and *Model Development and Simulation in Thermal Process Engineering* can be chosen

Modelling and Simulation (Election: at least 16 credits)				
M-CIWVT-106676	Introduction to Numerical Simulation of Reacting Flows	EN	WS	8 CP
M-CIWVT-107076	Numerical Simulation of Reacting Multiphase Flows	DE/EN	SS	8 CP
M-CIWVT-106537	Reactor Modeling with CFD	EN	SS	6 CP
M-CIWVT-106809	Computer-Aided Reactor Design	DE/EN	WS	6 CP
M-CIWVT-106835	Data-Driven Process Engineering Models in Python	DE	WS	4 CP
M-MATH-101338	Parallel Computing	DE/EN	Irreg.	5 CP
M-MATH-106634	Computational Fluid Dynamics and Simulation Lab	DE/EN	SS	4 CP
M-CIWVT-106319	Data-Based Modeling and Control	EN	WS	6 CP
M-CIWVT-107038	Simulation Technologies *First usage possible until Sep 30, 2026.*	DE	SS	6 CP
M-CIWVT-106832	Model Development and Simulation in Thermal Process Engineering	DE	WS	6 CP
M-CIWVT-107040	Thermal Process Engineering III	DE	WS	6 CP

4.4.11 New Bio-Production Systems - Electro-Biotechnology

Part of: Specialized Course I

Credits
16

Note regarding usage
First usage possible from Oct 01, 2023.
Type of examination:
Examination of each module according to the module description (written exam, oral exam, examination of another type).

On request, a block examination is also possible, provided that modules have been selected in which an oral examination is offered.

Election notes
Compulsory module:

- Electrobiotechnology

Only one of the following two modules may be chosen:

- Battieries, Fuel Cells and Electrocatalysis
- Battery and Fuel Cells Systems

It is recommended to choose the module "Modelling and Simulation of Electrochemical Systems" only in combination with the module "Batteries and Fuel Cells" or "Battery and Fuel Cells Systems".

New Bio-Production Systems - Electro-Biotechnology (Election: at least 16 credits)				
M-CIWVT-106518	Electrobiotechnology	DE	SS	6 CP
M-CIWVT-106816	C1-Biotechnology *First usage possible from Oct 01, 2024.*	DE	WS	6 CP
M-CIWVT-105295	Biotechnological Use of Renewable Resources	DE	WS	4 CP
M-CIWVT-106678	Industrial Biocatalysis *First usage possible from Apr 01, 2024.*	DE	SS	4 CP
M-CIWVT-103441	Biofilm Systems *First usage possible from Apr 01, 2024.*	EN	SS	4 CP
M-CIWVT-104570	Biobased Plastics	DE	WS	4 CP
M-CIWVT-104273	Commercial Biotechnology *First usage possible from Apr 01, 2023.*	DE	SS	4 CP
M-CIWVT-106838	Biosensors *First usage possible from Oct 01, 2024.*	EN	WS+SS	4 CP
M-CHEMBIO-106204	Molecular Biology and Genetics *First usage possible from Oct 01, 2025.*	DE	WS	5 CP
M-ETIT-105883	Electrocatalysis *First usage possible from Apr 01, 2023.*	EN	SS	5 CP
M-CHEMBIO-106697	Electrochemistry *First usage possible from Apr 01, 2024.*	DE	Irreg.	3 CP
M-ETIT-107005	Batteries, Fuel Cells, and Electrolysis *First usage possible from Oct 01, 2025.*	EN	WS	6 CP
M-ETIT-107551	Battery and Fuel Cell Systems *First usage possible from Apr 01, 2026.*	EN	SS	3 CP
M-ETIT-100508	Modelling and Simulation of Electrochemical Systems *First usage possible from Apr 01, 2023.*	DE	SS	3 CP

4.4.12 Bioresource Engineering

Part of: Specialized Course I

Credits
16

Type of examination:
Examination of each module according to the module description (written exam, oral exam, examination of another type).

On request a combined examination is possible.

Election notes

Compulsory module: Processes and Process Chains for Renewable Resources

The module Membrane Technologies in Water Treatment can't be chosen if it has already been chosen as Advanced Fundamentals.

Bioresource Engineering (Election: at least 16 credits)				
M-CIWVT-104273	Commercial Biotechnology	DE	SS	4 CP
M-CIWVT-104288	Biomass Based Energy Carriers	DE	WS	6 CP
M-CIWVT-104397	Innovation Management for Products & Processes in the Chemical Industry	DE/EN	WS	4 CP
M-CIWVT-104422	Processes and Process Chains for Renewable Resources	DE	SS	6 CP
M-CIWVT-104570	Biobased Plastics	DE	WS	4 CP
M-CIWVT-103441	Biofilm Systems	EN	SS	4 CP
M-CHEMBIO-104620	Food Chemistry Basics	DE	SS	4 CP
M-CIWVT-104266	Formulation of (Bio)pharmaceutical Therapeutics	DE	WS	4 CP
M-CIWVT-104342	Solid Liquid Separation	DE	WS	8 CP
M-CIWVT-105380	Membrane Technologies in Water Treatment *First usage possible from Apr 01, 2020.*	EN	SS	6 CP
M-CIWVT-105399	Mixing, Stirring, Agglomeration *First usage possible from Apr 01, 2020.*	DE	SS	6 CP
M-CIWVT-105295	Biotechnological Use of Renewable Resources *First usage possible from Oct 01, 2023.*	DE	WS	4 CP

M-CIWVT-106837	Bioprocess Scale-up *First usage possible from Apr 01, 2025.*	EN	WS	6 CP

4.4.13 Mechanical Process Engineering

Part of: Specialized Course I

Credits
16

Type of examination: Oral examination of each module

Exception: The examination in the module "Selected Formulation Technologies" is a written examination.

Election notes

- Modules/courses that have already been taken during the bachelor's program as part of a specialization shouldn't be chosen.
- Case studies in the module "Microfluidics" can be droped. In this case 4 credits are awarded for the module.
- The practical course in the module "Sol-Gel-Processes" can be droped. In this case 4 credits are awarded for the module.
- Only one of the modules "NMR for Engineers" and "NMR Methods for Product and Process Analysis" can be chosen. Both modules contain the same course. The module "NMR for Engineers" additionally includes a practical course.

Processes for Particle Engineering (Election: at least 16 credits)				
M-CIWVT-103073	Processing of Nanostructured Particles	DE	WS	6 CP
M-CIWVT-104284	Sol-Gel-Processes (Including Practical Course)	DE	WS	6 CP
M-CIWVT-104339	Nanoparticles – Structure and Function	DE	SS	6 CP
M-CIWVT-104340	Gas Particle Separation Processes	DE	WS	6 CP
M-CIWVT-104342	Solid Liquid Separation	DE	WS	8 CP

4.4.14 Technical Thermodynamics

Part of: Specialized Course I

Credits 16

Type of examination: Oral examination of each module

Election notes
Prerequisite:

- Compulsory elective module "Thermodynamics III"

At least two of the following modules have to be chosen:

- Statistical Thermodynamics
- Refrigeration B - Foundations of Industrial Gas Processing
- Physical Foundations of Cryogenics
- Cryogenic Engineering
- Thermodynamics of Interfaces
- Complex Phase Equilibria

The practical course in the module "Sol-Gel-Processes" can be droped. In this case 4 credits are awarded for the module.

Technical Thermodynamics (Election: at least 16 credits)				
M-CIWVT-103059	Statistical Thermodynamics	DE/EN	SS	6 CP
M-CIWVT-103063	Thermodynamics of Interfaces	DE/EN	SS	6 CP
M-CIWVT-103068	Physical Foundations of Cryogenics	EN	SS	6 CP
M-CIWVT-104284	Sol-Gel-Processes (Including Practical Course)	DE	WS	6 CP
M-CIWVT-104354	Refrigeration B - Foundations of Industrial Gas Processing	DE	SS	6 CP
M-CIWVT-104356	Cryogenic Engineering	EN	WS	6 CP
M-CIWVT-104478	Vacuum Technology	DE	WS	6 CP
M-CIWVT-104489	Sol-Gel Processes	DE	WS	4 CP
M-CIWVT-104461	Chem-Plant *First usage possible from Apr 01, 2023.*	DE	SS	4 CP

4.4.15 Thermal Process Engineering

Part of: Specialized Course I

Credits 16

- Type of examination: Oral examination of each module
- For the following modules a combined examination is possible:
    - Heat Transfer II
    - Mass Transfer II
    - Heat Exchangers

Election notes
At least two of the following modules has to be chosen:

- Thermal Process Engineering III
- Heat Transfer II
- Mass Transfer II
- Heat Exchangers
- Model Development and Simulation in Thermal Process Engineering
- Applied Model Development and Simulation in Thermal Process Engineering

Only one of the following modules can be chosen:

- Mass Transfer II
- Applied Mass Transfer - Energy Systems and Thin Films

Thermal Process Engineering (Election: at least 16 credits)				
M-CIWVT-107040	Thermal Process Engineering III *First usage possible from Oct 01, 2025.*	DE	WS	6 CP
M-CIWVT-103051	Heat Transfer II	DE	WS	6 CP
M-CIWVT-104369	Mass Transfer II	DE	WS	6 CP
M-CIWVT-104371	Heat Exchangers	DE	WS	6 CP
M-CIWVT-106832	Model Development and Simulation in Thermal Process Engineering *First usage possible from Oct 01, 2024.*	DE	WS	6 CP
M-CIWVT-104370	Drying Technology	DE	SS	6 CP
M-CIWVT-106823	Applied Mass Transfer - Energy Systems and Thin Films *First usage possible from Oct 01, 2024.*	DE	WS	6 CP
M-CIWVT-103075	High Temperature Process Engineering	DE	SS	6 CP
M-CIWVT-104297	Measurement Techniques in the Thermo-Fluid Dynamics	DE	WS	6 CP
M-CIWVT-103059	Statistical Thermodynamics	DE/EN	SS	6 CP
M-CIWVT-104352	Process and Plant Safety	DE	SS	4 CP
M-CIWVT-104354	Refrigeration B - Foundations of Industrial Gas Processing	DE	SS	6 CP
M-CIWVT-104461	Chem-Plant *First usage possible from Oct 01, 2024.*	DE	SS	4 CP

4.4.16 Environmental Process Engineering

Part of: Specialized Course I

Credits 16

Type of examination: Oral examination of each module

Election notes
At least one of the following modules has to be chosen:

- Water Technology
- Gas Particle Separation Processes
- Combustion and Environment
- Applied Combustion Technology

The module "Liquid Transportation Fuels" can't be chosen if the module "Refinery Technology - Liquid Fuels" has been chosen in another subject.

Environmental Process Engineering (Election: at least 16 credits)				
M-CIWVT-103407	Water Technology	EN	WS	6 CP
M-CIWVT-104289	Fuel Technology	DE	WS	6 CP

4.4.18 Water Technology

Part of: Specialized Course I

Credits
16

Type of examination: Oral examination of the module combination

Exception: The examination in the modules *Membrane Technologies in Water Treatment* and *Fundamentals of Water Quality* are written examinations.

Election notes
Compulsory module:

- Water Technology

In addition, at least one of the following modules has to be chosen:

- Fundamentals of Water Quality
- Industrial Wastewater Treatment
- Membrane Technologies in Water Treatment

Further requirements:

- Only one of the modules "NMR for Engineers" and "NMR Methods for Product and Process Analysis" can be chosen.
- The module "Water Quality Assessment" should not be chosen if the specialization "Water Quality and Process Engineering of Water and Waste Water Treatment" has been chosen in the bachelor's program.

5 Modules

5.1 Module: Model Development and Simulation in Thermal Process Engineering [M-CIWVT-106832]

Coordinators: Prof. Dr.-Ing. Tim Zeiner
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2024)
Specialized Course I / Thermal Process Engineering (Usage from 10/1/2024)
Specialized Course I / Technical Thermodynamics (Usage from 10/1/2025)
Specialized Course I / Modelling and Simulation

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-113702	Model Development and Simulation in Thermal Process Engineering	6 CP	Zeiner

Assessment
Learning control is an examination of another type. Presentation of project results.

Prerequisites
None

Module Grade Calculation
The module grade is the grade of the examination of another type.

Workload

- Attendance time: Lectures and Exercises 60 hrs
- Self-study: 60 hrs
- preperation presentation: 60 hrs

Recommendations
Thermodynamics III

M 5.2 Module: Additive Manufacturing for Process Engineering [M-CIWVT-105407]

Coordinators: TT-Prof. Dr. Christoph Klahn
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2020)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	English	5	2

Mandatory			
T-CIWVT-110902	Additive Manufacturing for Process Engineering - Examination	5 CP	Klahn
T-CIWVT-110903	Practical in Additive Manufacturing for Process Engineering	1 CP	Klahn

Assessment
Learning control consists of:

- Practical (ungraded)
- Oral examination lastin approx. 30 minutes

Prerequisites
Practical in Additive Manufaturing for Process Engineeing is a prerequisite for the oral exam.

Competence Goal
Students are familiar with the concept of a fully digital fabrication chain using and linking together modeling and simulation, computer aided design and 3D printing. They know the most important 3D printing methods suitable for process engineering applications. Moreover, they are able to use standard tools for 3D data generation and they already own hands on practical experience with the use of a metal 3D printer for fabrication of highly precise parts with complex shape.

Content
The rationale for additive manufacturing and key aspects of this approach are explained. An overview of different methods and materials for 3D printing is given with a focus on the use of 3D printed parts or fully functional devices in chemical and process engineering. Tools for 3D data generation for additive manufacturing are introduced and design rules for selected 3D printing methods are explained. Illustrative examples for 3D printed components and functional devices in process engineering are presented and discussed based on literature and own research. In the practical, students will work together in small groups on a fully digital fabrication of functional parts by selective laser melting of metal powder going through a cycle of 3D data generation, 3D printing, and finishing of the printed parts.

Module Grade Calculation
Module grade is the grade of the oral examination.

Workload
Lectures: 30 h

Practical: 16 h (8 experiments)

Homework: 90 h

Exam Preparation: 44 h

Total: 180 h

M 5.3 Module: Advanced Methods in Nonlinear Process Control [M-CIWVT-106715]

Coordinators: Dr.-Ing. Pascal Jerono
Prof. Dr.-Ing. Thomas Meurer

Organisation: KIT Department of Chemical and Process Engineering

Part of: Technical Supplement Course (Usage from 4/1/2024)
Specialized Course I / Automation and Process Systems Engineering (Usage from 4/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-113490	Advanced Methods in Nonlinear Process Control	4 CP	Jerono, Meurer

Assessment
The learning control is an oral exam lasting approx. 45 minutes.

Prerequisites
None

Competence Goal
Students have an in-depth understanding of methods and concepts for the analysis and the control of nonlinear dynamic systems. They understand the underlying mathematical concepts and can apply them to new problems. They are able to independently design non-linear controls for specific problems and analyze the stability of the closed-loop system.

Content
The module covers selected advanced methods in nonlinear control of finite-dimensional systems that directly exploit the nonlinear system dynamics and result in control concepts relevant for different applications. This includes in particular:

- Lyapunov theory and Lyapunov-based design methods
- Disspativity and passivity-based control concepts
- Input-to-state stability

Problem sets are considered in the exercises to apply the developed methods using analytical tools as well as computer algebra systems to realize the design approaches.

Module Grade Calculation
The module grade ist the grade of the oral exam.

Workload

- Attendance time: Lecture 30 hrs
- Homework: 30 hrs
- Exam preparation: 60 hrs

5.4 Module: Air Pollution Control - Laws, Technology and Application [M-CIWVT-106314]

Coordinators: Prof. Dr.-Ing. Achim Dittler
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2023)
Specialized Course I / Gas Particle Systems (Usage from 4/1/2023)
Specialized Course I / Mechanical Process Engineering (Usage from 4/1/2023)
Specialized Course I / Environmental Process Engineering (Usage from 4/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-112812	Air Pollution Control - Laws, Technology and Application	4 CP	Dittler

Assessment
Oral examination, duration approx. 20 minutes.

Prerequisites
None

Competence Goal
Students develop an understanding of the broad subject area of air pollution control. They are able to define application-oriented solutions for emission reduction and know the essential problems in the operational behavior of the respective components of the applied technologies for air pollution control / presentation of required limit values (oxidation catalyst, particulate filter, SCR catalyst, ammonia slip catalyst). The students learn to classify current issues in air pollution control objectively and to evaluate them independently.

Content

- Air pollutants - definition
- Legal framework: Legislation for emission and immission, EU, worldwide - meaning & differences
- Development of emissions and immissions, current problem areas
- Technologies for air pollution control
- Oxidation catalysts: Structure, function, design & application
- Particulate filters: structure, function & design of particulate filters, soot and ash separation; aging of systems due to ash deposits; ash removal
- DeNOx systems - exhaust gas cleaning by means of selective catalytic reduction: basic reactions; possible reducing agents; AdBlue® - specification & preparation; characterization of applied catalysts; structure, function & design of systems
- Combined exhaust gas aftertreatment systems - structure & mode of operation

Module Grade Calculation
The module grade is the grade of the oral exam.

Workload

- Attendance time: 30 h
- Self-study: 50 h
- Exam preparation: 40 h

M 5.5 Module: Alternative Protein Technologies [M-CIWVT-106661]

Coordinators: PD Dr.-Ing. Azad Emin
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2024)
Specialized Course I / Food Process Engineering (Usage from 4/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	English	4	1

Mandatory			
T-CIWVT-113429	Alternative Protein Technologies	4 CP	Emin

Assessment
The learning control is an oral examination lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
Upon successful completion of this module, students will be able to:

1. Understand and describe the fundamental aspects of various alternative proteins, including plant-based, fermentation-derived, and cultivated meat and dairy alternatives.
2. Evaluate the nutritional profiles and sensory properties of meat and dairy substitutes.
3. Grasp the basic principles of material science that are applicable to the development of alternative proteins.
4. Gain familiarity with precision fermentation processes and their practical applications in creating alternative proteins.
5. Recognize the significance and methodology of extrusion technology in enhancing the texture and structure of plant-based proteins.
6. Develop a basic understanding of product design and marketing strategies tailored for alternative proteins.
7. Identify the key technological processes in alternative protein production and their environmental implications.
8. Acquire a foundational awareness of the market dynamics and emerging trends within the alternative protein sector.
9. Participate in practical projects and engage with industry professionals to apply learned concepts in real-world contexts.

Content
This course is designed to offer an academic and technical exploration into the field of alternative protein technologies. It encompasses a detailed study of the science, engineering, and technological aspects behind the development of plant-based, fermentation-derived, and cultivated protein products. Key focus areas include the sustainability challenges associated with conventional meat and dairy production, and the potential of alternative proteins to address these issues.

Participants will delve into the material science principles that guide the development of meat and dairy substitutes, examining texture, structure, and sensory properties. The course will cover advanced topics such as precision fermentation and its role in alternative protein production, the technology behind cultivated meat, and the application of extrusion technology in creating plant-based protein structures.

The curriculum also includes a comprehensive study of the production processes, nutritional profiles, and environmental impacts of various alternative protein sources such as legumes, insects, algae, and mycoprotein. Through this course, students will gain a thorough understanding of the current technologies, challenges, and innovations in the field, equipping them with the knowledge to contribute to the future advancements in the alternative protein sector.

Module Grade Calculation
The module grade is the grade of the oral exam.

Additional Information
Course location: Seminar room, nexnoa GmbH, Durmersheimerstr. 188A, 76189 Karlsruhe

Workload
- Attendance time: 30 hrs.
- Preparation and wrap-up lectures: 30 hrs.
- Exam preparation: 60 hrs.

M 5.6 Module: Applied Mass Transfer - Energy Systems and Thin Films [M-CIWVT-106823]

Coordinators: Prof. Dr.-Ing. Wilhelm Schabel
Dr. Philip Scharfer

Organisation: KIT Department of Chemical and Process Engineering

Part of: Technical Supplement Course (Usage from 10/1/2024)
Specialized Course I / Thermal Process Engineering (Usage from 10/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	5	2

Mandatory			
T-CIWVT-113692	Applied Mass Transfer - Energy Systems and Thin Films	6 CP	

Assessment
Learning control is an oral exam lasting approx. 30 minutes.

Prerequisites
None.

Competence Goal
Students are able to carry out calculations for application-oriented mass transfer processes using basic examples from the field of energy and thin-film technology and to evaluate an analysis of their own experimental results with their own model calculations in a small team of 3 - 5 people.

The qualification objective is to independently derive these application-oriented findings from fundamental issues in mass transfer and process engineering and to transfer these findings to new future issues and applications.

Content
The lecture is aimed at anyone interested in **fundamental issues** in **mass transfer** with reference to **renewable energies** and topics in the field of battery and hydrogen technology, as well as the latest thin-film technologies.

Topics of mass transfer with reference to applications and current research are dealt with. Discussion and evaluation of current topics in mass transfer and lecture content will be discussed according to the state of knowledge in the literature in lectures and colloquia. Four experiments on fundamental topics such as Stefan-Knudsen diffusion in porous media, selective evaporation with surface tension-driven mass flows, film-dominated mass transfer and film drying with polymer additives as well as the topics of sorption and chemisorption with diffusion and reaction kinetics are dealt with phenomenologically and in practical application. The experiments are discussed with the scientific supervisors in colloquia. The results of at least 3 out of 4 experiments are worked out by the group as a team in close cooperation and under scientific supervision.

Module Grade Calculation
The module grade ist the grade of the oral exam.

Additional Information
The number of participants is limited to a maximum of 20 people.

Registration procedure: For information, see the information sheet in ILIAS and on the homepage.

Workload

- Lectures and exercises: 45 hrs
- Lab: Preparation and execution of experiments: 40 hrs
- Group work and experiment evaluation: 45 hrs
- Homework: Preparation and wrap-up of lectures and exercises: 20 hrs
- Exam preparation: 30 hrs

5.7 Module: Batteries, Fuel Cells, and Electrolysis [M-ETIT-107005]

Coordinators: Prof. Dr.-Ing. Ulrike Krewer
Organisation: KIT Department of Electrical Engineering and Information Technology
Part of: Technical Supplement Course (Usage from 10/1/2025)
Specialized Course I / New Bio-Production Systems - Electro-Biotechnology (Usage from 10/1/2025)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	4	2

Mandatory			
T-ETIT-113986	Batteries, Fuel Cells, and Electrolysis	5 CP	Krewer
T-ETIT-114957	Batteries, Fuel Cells, and Electrolysis - Group Project *This item will not influence the grade calculation of this parent.*	1 CP	Krewer

Assessment
Success control takes place in the form of:

1. an ungraded written technical report (approx. 7-10 pages).
2. a graded written examination lasting 120 minutes.

Prerequisites
none

Competence Goal
Students gain an understanding of batteries, fuel cells and electrolysis including their application, design, and behavior. They acquire in-depth knowledge of the transport and charge transfer processes in them, their impact on performance and design, and the characteristics of the most frequent types of batteries, fuel and electrolysis cells. They understand how to analyze and characterize them using measurement methods and modeling. A practical insight into current areas of application and research topics of electrochemical energy storage and conversion allows them to relate the course work to demands of the society and for R&D. They are able to communicate with specialists from related disciplines in the field of (application of) batteries, fuel cells and electrolysis and can actively contribute to the opinion-forming process in society with regard to energy technology issues.

Content
The course introduces batteries, fuel cells and electrolysis and their use for sustainable mobile and stationary energy supply and storage. The course is divided into five sections. The first part covers the role of batteries, fuel cells and electrolysis for renewable energy storage and electrification of the energy system and the present applications. This is followed by a fundamentals part, where the processes in electrochemical cells at open circuit and during operation and their relation to cell performance and behavior are discussed. It contains thermodynamics, kinetics, transport and performance measures. The third part deals with the working principle, design and operation of fuel cells and electrolysis and the particularities of the different cell types. This is followed by a similar part for batteries. Finally, dynamic and stationary methods for characterizing the cells are covered.

Group project

As part of the coursework, student groups work on the design of a battery, fuel cell or electrolyser for a given application during the semester. This includes literature research on cell type, materials and material data as well as the dimensioning and energetic evaluation of the cell. The results are documented in a short technical report.

Module Grade Calculation
The module grade is the grade of the written examination.

Workload

1. Lecture attendance time: 15 * 2 h = 30 h
2. Preparation and follow-up time for lecture: 15 * 5 h = 75 h
3. Exercise attendance time: 7 * 2 h = 14 h
4. Preparation and follow-up time for exercise: 7 * 4 h = 28 h
5. Group work including writing of a report: 33 h
6. Exam preparation and attendance: included in preparation and follow-up time.

Total: 180 h = 6 CP

5.8 Module: Battery and Fuel Cell Systems [M-ETIT-107551]

Coordinators: Dr.-Ing. Andre Weber
Organisation: KIT Department of Electrical Engineering and Information Technology
Part of: Specialized Course I / New Bio-Production Systems - Electro-Biotechnology (Usage from 4/1/2026)

Credits	Grading	Recurrence	Duration	Language	Level	Version
3 CP	graded	Each summer term	1 term	English	4	1

Mandatory			
T-ETIT-114802	Battery and Fuel Cell Systems	3 CP	Weber

Assessment
Success controll takes place in the form of an oral examination lasting approx. 20 minutes.

Prerequisites
none

Competence Goal

- Students can explain the basic principles required for developing battery and fuel cell systems and apply them using practical examples.
- Students can describe the components of fuel cell systems and plan their integration into fuel cell systems.
- Students can compare system concepts for fuel cell systems and evaluate their advantages and limitations.
- Students can analyze battery systems for hybrid and electric vehicles, particularly lithium-ion systems.
- Students can design appropriate charging and balancing strategies.
- Students can explain safety concepts at cell and battery level as well as battery management systems (BMS) and assess their functionality.
- Students can describe alternative electrochemical energy storage systems such as redox-flow batteries and electrolyzers and analyze their potential applications.

Content
The lecture Battery and Fuel Cell Systems covers current developments in the field of fuel cells, electrolyzers and batteries considering system-relevant aspects of the technologies. In the first part of the lecture, fuel cell systems and their components are discussed. The integration of the various types of low- and high-temperature fuel cells into systems and the related requirements for fuel preparation are presented and different system concepts implemented to date are compared. In the second part of the lecture, battery systems for hybrid and electric vehicles are presented and the batteries and cells used in these are discussed. The focus is on lithium-ion battery systems, with charging strategies and circuits for charge equalization, safety concepts at cell and battery level and BMS systems being discussed. In the last part of the lecture, alternative electrochemical energy storage systems such as redox-flow batteries and electrolyzers are presented.

Module Grade Calculation
The module grade is the grade of the oral examination.

Workload
1. Lecture attendance time: 15 * 2 h = 30 h
2. Preparation and follow-up time for lecture: 15 * 2 h = 30 h
3. Exam preparation and attendance in the same: 30 h

Total: 90 h

Recommendations
The contents of the lecture "M-ETIT-107005 – Batteries, Fuel Cells, and Electrolysis" are assumed to be known. Students can furthermore download a script with useful information on the Ilias site of the lecture “Battery and Fuel Cell Systems”.

M 5.9 Module: Biobased Plastics [M-CIWVT-104570]

Coordinators: Prof. Dr. Ralf Kindervater
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Bioresource Engineering
Specialized Course I / New Bio-Production Systems - Electro-Biotechnology

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German	5	1

Mandatory			
T-CIWVT-106841	Biofilm Systems	4 CP	Hille-Reichel, Wagner

Assessment
The learning control is an oral exam lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
Students are able to describe the structure and function of biofilms in natural habitats and technical applications and explain the main influencing factors and processes for the formation of certain biofilms. They are familiar with methods for visualizing the structures.

Content
This lecture aims at providing an overview of biofilm systems, their development, functions, applications, and the techniques used to investigate them. Thus, topics involved will include basics of (biofilm) microbiology, natural (environmental) biofilm systems, their application in technical systems (reactors), and methods used to quantify biofilm development and performance (i.e., imaging techniques, digital image analysis).

Module Grade Calculation
Grande of the module is the grade of oral examination.

Workload
Attendance time: 30 h
Preparation/follow-up: 30 h
Examination + exam preparation: 60 h

None

Competence Goal
The course mediates fundamentals and process engineering aspects of biomass conversion and conditioning processes. The students learn to understand and to evaluate processes for biomass utilization by balancing mass and energy streams. Taking into account regional and global feedstock potentials the students are enabled to choose the most efficient conversion technologies.

Content
Fundamentals on biomass and its production pathways to energy carriers like substitute natural gas (SNG), bio diesel or other fuels.

Production, properties, and characterization of biomass.

Potential and sustainability; energy demand and supply, potentials today and in the future, CO2 emissions and reduction potential.

Utilization and conversion of biogenic oils and fats.

Biochemical conversion to liquid products like alcohols; fermentation to biogas and its upgrading.

Thermochemical conversion of biomass via pyrolysis and gasification; examples for synthesis processes (FT-, CH4-, CH3OH-, DME-synthesis).

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 45 hrs
- Homework: 75 hrs
- Exam Preparation: 60 hrs

M 5.12 Module: BioMEMS - Microsystems Technologies for Life Sciences and Medicine I [M-MACH-100489]

Coordinators: Prof. Dr. Andreas Guber
Organisation: KIT Department of Mechanical Engineering

Part of: Technical Supplement Course
Specialized Course I / Biopharmaceutical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-MACH-100966	BioMEMS - Microsystems Technologies for Life-Sciences and Medicine I	4 CP	Guber

Assessment
Written exam (75 min)

Prerequisites
none

Competence Goal
Professional qualification goals:
Students will be able to describe basic microtechnical manufacturing processes (e.g. LIGA, silicon microtechnology, laser micromachining) and analyze their suitability for biomedical applications.
They are able to compare different microfluidic components (e.g. microchannels, micropumps, microfilters) and explain their function in the context of µTAS and lab-on-chip systems.
Students will be able to explain the properties and possible applications of biomaterials and sterilization processes for microsystems in medical technology.
Furthermore, they can evaluate the interactions between microtechnical production and biomedical application and transfer them to selected case studies from the life sciences.
Interdisciplinary qualification goals:
Students will be able to recognize interdisciplinary connections between technology, biology and medicine and argue in a structured manner in discussions. Furthermore, they will be able to critically reflect on current developments and literature in the field of microsystems technology for life science applications and assess their relevance for research and industry.

Content
The lecture will first address relevant microtechnical manufacturing methods. Then,
selected biomedical applications will be presented, as the increasing use of
microstructures and microsystems in Life-Sciences und in medicine leads to improved medico-technical
products, instruments, and operation and analysis systems.

Introduction into various microtechnical manufacturing methods: LIGA, Micro milling, Silicon Micromachining, Laser Microstructuring, µEDM, Metal-Etching
Biomaterials, Sterilisation.
Examples of use in the life science sector: basic micro fluidic strucutures: micro channels, micro filters, micromixers, micropumps, microvalves, Micro and nanotiter plates, Microanalysis systems (µTAS),
Lab-on-chip applications.

Mandatory			
T-MACH-100967	BioMEMS - Microsystems Technologies for Life-Sciences and Medicine II	4 CP	Guber

Assessment
Written exam (75 min)

Prerequisites
None

Competence Goal
Professional qualification goals:
Students will be able to describe modern microfluidic systems (e.g. Lab-CD, microarrays, biochips) and analyze their functional principles in the context of biomedical applications. They will be able to explain and evaluate biohybrid cell-chip systems and their use in tissue engineering and drug testing.
Students will be able to explain the structure and function of microprocess engineering components (e.g. microreactors, microfluidic measuring cells) and assess their use in spectroscopic investigations.
They can examine specific microsystems technology solutions for medical applications in anesthesia, intensive care medicine and infusion therapy and compare their principles of action.
They will be able to describe micro- and nanoscale technologies (e.g. in nanosurgery or neuroprosthetics) in a differentiated manner and assess their significance for future therapy concepts.

Interdisciplinary qualification goals:
Students will be able to recognize and reflect on interdisciplinary connections between technology, biology and medicine and argue for them in scientific discussions.
Furthermore, they are able to analyze current scientific publications on applications of microsystems technology in the life sciences and critically discuss their relevance.
They will be able to reflect on technological developments in the field of microsystems technology with regard to ethical, social and regulatory aspects.

Content
The lecture will first shortly address some relevant microtechnical manufacturing methods. Then, selected biomedical applications will be presented, as the increasing use of microstructures and microsystems in Life-Sciences und in medicine leads to improved medico-technical products, instruments, and operation and analysis systems.

Examples of use in Life-Sciences and biomedicine: Microfluidic Systems:
LabCD, Protein Cristallisation
Microarrys
Tissue Engineering
Cell Chip Systems
Drug Delivery Systems
Micro reaction technology
Microfluidic Cells for FTIR-Spectroscopy
Microsystem Technology for Anesthesia, Intensive Care and Infusion
Analysis Systems of Person´s Breath
Neurobionics and Neuroprosthesis
Nano Surgery

Assessment
Written exam (75 min)

Prerequisites
none

Competence Goal

- Students are able to describe relevant microtechnical production methods, explain their functional principle and evaluate their use for biomedical and biotechnological applications as well as for BioMEMS.
- Students are able to analyze the use of microstructures and microsystems in life sciences and (bio)medicine using specific examples and assess their influence on medical technology and biotechnology products and systems.
- Students can explain examples of applications in the life sciences and biotechnology, such as microfluidic systems (e.g. lab-on-a-chip, digital microfluidics), biochips, tissue engineering, organ-on-a-chip, drug delivery systems, respiratory gas analysis and neuroprosthetics (e.g. artificial retina, exoskeletons) and compare their technical requirements.
- Students can explain examples of applications in minimally invasive surgery, neurosurgery, interventional cardiology and vascular therapy as well as NOTES and surgical robotics and compare their technical requirements.
- Students will be able to describe and apply the key requirements of the Medical Devices Act and the principles of quality management for medical technology products.

Content

Assessment
Written examination; duration 120 minutes.

Prerequisites
None

Competence Goal
This course aims to provide students with a comprehensive understanding of the principles, techniques and application of bioprocess development regarding the production of biologically based products. Through a combination of lectures, discussions, and exercises, students will gain knowledge and experience about the various stages of bioprocess development. Upon completion of this module, students should have/be able to:

1. Developed an in-depth understanding of the principles and fundamentals of bioprocess development.
2. Developed a thorough understanding of the different types of bioprocesses and their applications.
3. Gained insight into the development of a successfully established industrial bioprocess.
4. Gained insight into cost and sustainability evaluation of bioprocesses.
5. Gained the ability to combine theoretical understanding and practical application.
6. Developed critical thinking and problem-solving skills necessary for identifying and addressing challenges that arise during bioprocess development.
7. Developed skills and knowledge to evaluate the potential of new methods and tools for accelerated bioprocess development.
8. Developed effective communication and teamwork skills necessary for success in a multidisciplinary bioprocess development environment.

Content
The lecture course covers and discusses various topics and their impact onto efficient bioprocess development. This includes:

- Identification and selection of biocatalyst
- Growth and microbial physiology
- Strain engineering
- Strain and process parameter screening
- Bioprocess optimization
- Bioprocess-scale-up
- Cost and sustainability estimation
- Case studies: Discussion of real-world examples of bioprocess development, including case studies of successful and unsuccessful bioprocess development efforts.

Optional topics include:

- Regulatory and quality control requirements for bioprocess development.
- Computational and mathematical modelling tools to simulate, support and optimize bioprocesses development.

Module Grade Calculation
The grade of the module ist the grade of the written exam.

Workload

- Attendance time: Lectures and Exercises: 60 h
- Homework: 80 h
- Exam preparation: 40 h

5.17 Module: Bioprocess Scale-up [M-CIWVT-106837]

Coordinators: Prof. Dr.-Ing. Alexander Grünberger
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2024)
Specialized Course I / Bioresource Engineering (Usage from 4/1/2025)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	4	2

Mandatory			
T-CIWVT-113712	Bioprocess Scale-up	6 CP	Grünberger

Assessment
Learning control is an oral exam lasting approx. 30 minutes.

Competence Goal
Upon completion of the course, students will be able to:

Subject-Specific and Methodological Competencies

- Understand the fundamentals of scaling laws.
- Demonstrate knowledge of key scale-up strategies.
- Apply essential knowledge and toolsets required for the scale-up of bioprocesses.
- Recognize potential pitfalls and challenges during the scale-up process.
- Identify and implement best practices for the scale-up of bioprocesses.
- Bridge the gap between laboratory research and industrial production.

Social and Self-Competence

- Identify and summarize the key elements involved in bioprocess scale-up.
- Communicate effectively and collaborate with experts from various disciplines involved in bioprocess scale-up.
- Demonstrate critical thinking, creativity, and problem-solving skills necessary for scaling up novel bioprocesses.

Content
Biopharmaceuticals, enzymes, and biological materials used in food supplements are commonly produced through the cultivation of bacteria, yeast, fungi, plant, or animal cells in bioreactors. Regardless of the specific bioprocess, efficiency in terms of time, cost, and resource utilization is essential. Typically, these bioprocesses are developed initially at a small laboratory scale and then progressively transferred to larger volumes until reaching commercial industrial production. This critical transition is known as the scale-up of bioprocesses.

The objective of this course is to provide students with the fundamental knowledge and practical skills required to successfully scale-up biotechnological processes from laboratory to industrial scale. To achieve this, the course introduces key methods, concepts, and tools that form the foundation for effective scale-up of biochemical processes.

The course begins with an introduction to scaling laws, which are essential for understanding how process parameters change with scale. Examples from biology will be given. Following this, general scale-up methods are presented that enable transferring processes while maintaining performance and product quality. Industrial strategies and procedures are then discussed, supported by real-world examples and case studies. Finally, emerging trends and challenges in bioprocess scale-up are explored, highlighting innovative technologies and addressing future obstacles in the field. Through a combination of theoretical concepts, practical examples, and real-world case studies, this lecture aims to equip participants with the ability to develop and implement suitable scale-up strategies.

Module Grade Calculation
The module grade is the grade of the oral exam.

Workload

- Lectures and exercises: 45 hrs
- Homework: 95 hrs
- Exam preparation: 40 hrs

Recommendations
Fundamentals of Bioprocess Engineering.

Literature
No specific textbook is recommended.

Assessment
The learning control is an oral examination lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
This lecture conveys the role of biotechnological processes in a future bioeconomy. Possible raw materials, their preparation and subsequent biotechnological implementation into energy carriers, platform chemicals and special microbial products are presented.

Content
After an introduction to the basics of a future bioeconomy and the comparison of chemical and biotechnological industrial processes using renewable resources, their preparation for biotechnological use and their implementation into energy sources (methane, ethanol), platform chemicals (lactate, dicarboxylic acids, amino acids) and special microbial products (polysaccharides, biosurfactants, flavoring substances) and coupling products like bioplastics. The examples of sugar production, papermaking and ethanol production explain various biorefinery concepts.

Module Grade Calculation
The module grade is the grade of the oral exam.

Assessment
The learning control consits of two componets:

- oral exam lasting approx. 30 minutes
- ungrade coursework: Seminar presentation

Prerequisites
Prerequisite for participation in the module: None.
Prerequisite within the module: Participation in the oral examination is only possible after attending the seminar/passing the presentation.

Module Grade Calculation
The module grade ist the grade of the oral exam.

Workload

- Attendance time: 45 hrs
- Homework:
  - Preparation of seminar presentation: 40 hrs
  - Preparation and wrap-up of the lecture: 55 hrs
- Exam preparation: 40 hrs

M 5.22 Module: Catalysis for Sustainable Chemicals and Energies [M-CIWVT-107131]

Coordinators: Dr. Arik Malte Beck
Prof. Dr. Jan-Dierk Grunwaldt
Dr. Erisa Saraci
Prof. Dr. Felix Studt
TT-Prof. Dr. Moritz Wolf

Organisation: KIT Department of Chemical and Process Engineering

Part of: Technical Supplement Course (Usage from 4/1/2025)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	English	5	1

Mandatory			
T-CIWVT-114167	Catalysis for Sustainable Chemicals and Energies	4 CP	Beck, Grunwaldt, Saraci, Studt, Wolf

Assessment
Learning control is an oral examination lasting approx. 20 minutes.

Prerequisites
None.

Competence Goal
After completing this course, students understand the role of catalysis in transforming renewable resources into sustainable fuels and chemicals. They can explain current energy supply systems and strategies for decarbonisation. Students understand complementary pathways, including synthesis gas chemistry and platform molecule routes. They know key upgrading strategies for biomass and the derived platform molecules. They can outline the principles of Power-to-X processes such as methanol synthesis and Fischer–Tropsch technology. They understand fundamental concepts in heterogeneous, electro- and photocatalysis, including basic modelling approaches and device principles. Students can describe current industrial catalytic processes and discuss their transition toward more sustainable practices. They are able to evaluate catalytic routes with respect to efficiency, resource use and sustainability.

Content

- Current energy supply and future strategies
- Complementary strategies: Synthesis gas vs. platform routes
- Biomass resources for green chemicals
  - Biomass upgrading
  - Platform molecules
- Power-to-X routes
  - Methanol synthesis
  - Fischer-Tropsch technology
- Theory and modelling in catalysis and electrocatalysis
- Current catalytic processes in industrial refineries and their transition to green practices
- Electro and photocatalysis
  - Fundamentals
  - Devices and testing

Module Grade Calculation
The module grade is the grade of the oral examination.

Additional Information
Exam can be taken in German or English.

Workload

- Attendance time: 30 hrs
- Homework: 50 hrs
- Exam preparation: 40 hrs

Literature
Announced in lectures/on slides.

M 5.23 Module: Catalytic Micro Reactors [M-CIWVT-104451]

Coordinators: Prof. Dr.-Ing. Peter Pfeifer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Chemical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	5	1

Mandatory			
T-CIWVT-109087	Catalytic Micro Reactors	4 CP	Pfeifer

Assessment
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

Prerequisites
None

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Lectures and Exercises: 30 h
- Homework: 50 h
- Exam preparation: 40 h

5.24 Module: Catalytic Micro Reactors (including practical course) [M-CIWVT-104491]

Coordinators: Prof. Dr.-Ing. Peter Pfeifer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Chemical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-109182	Practical Course Measurement Techniques in Chemical Processing	2 CP	Pfeifer
T-CIWVT-109087	Catalytic Micro Reactors	4 CP	Pfeifer

Assessment
The Examination consists of:

1. Oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO)
2. Ungraded laboratory wokr (section 4 subsection 3 SPO)

Prerequisites
None

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 h
- Practical course: 20 h , Elaboration: 30 h
- Homework: 50 h
- Exam Preparation: 50 h

M 5.25 Module: Catalytic Processes in Gas Technologies [M-CIWVT-104287]

Coordinators: Dr.-Ing. Siegfried Bajohr
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Fuel Technology

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108827	Catalytic Processes in Gas Technologies	4 CP	Bajohr

Assessment
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

Prerequisites
None

Competence Goal
The students know the relevant catalytic processes in gas technology. Understanding the interaction between thermodynamic, mass and heat transfer and reaction kinetic on the basis of concrete examples enables them to evaluate reactor concepts and develop new approaches for catalytic processes.

Content
Sources, utilization, demand and characterization of gaseous chemical energy carriers.

Catalytic processes for production, conditioning and utilization of gaseous energy carriers. Synthesis and utilization (e. g. methanation and steam reforming); exothermic vs. endothermic processes.

Catalytic processes for gas cleaning and conditioning.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 h
- Homework: 50 h
- Exam Preparation: 40 h

5.26 Module: Chemical Hydrogen Storage [M-CIWVT-106566]

Coordinators: TT-Prof. Dr. Moritz Wolf
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2023)
Specialized Course I / Fuel Technology (Usage from 10/1/2023)
Specialized Course I / Chemical Process Engineering (Usage from 10/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	English	4	1

Mandatory			
T-CIWVT-113234	Chemical Hydrogen Storage	4 CP	Wolf

Assessment
The learning control is an oral exmaination lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
The students are able to explain basic properties of hydrogen and hydrogen carriers, know the production methods of green hydrogen and can assess its role in the context of the energy transition, especially with regard to industrial use as feedstock. They understand sustainable and emerging technologies for chemical hydrogen storage, can describe the catalysts required for the various processes and know special associated challenges. The students can evaluate different chemical, but also physical storage technologies, assess the costs of individual process steps and describe the corresponding potential areas of application.

Content

- Introduction to various concepts of (chemical) hydrogen storage
  - Storage technologies
  - Carrier molecules
  - Storage cycles
- Processes and catalysts for chemical hydrogen storage technologies
  - Ammonia
  - Liquid organic hydrogen carriers (LOHCs)
  - Dimethylether
- Evaluation of storage processes in comparison with liquid hydrogen
  - Sustainability
  - Costs of production
  - Costs of transportation
  - Costs of hydrogen application

Module Grade Calculation
The module grade is the grade of the oral exam.

Workload

- Attendance time: 40 hrs
- Self-study: 40 hrs
- Exam preparation: 40 hrs

Literature
Announced in lectures/on slides.

M 5.27 Module: Chemical Process Engineering II [M-CIWVT-104281]

Coordinators: Prof. Dr.-Ing. Gregor Wehinger
Organisation: KIT Department of Chemical and Process Engineering
Part of: Specialized Course I / Chemical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	5	3

Mandatory			
T-CIWVT-108817	Chemical Process Engineering II	6 CP	Wehinger

Assessment
The learning control is an oral examination with a duration of about 20 minutes.

Prerequisites
None

Competence Goal
Students know the film model and are able to apply it for the calculation of mass transport effects in reacting multiphase systems. They know technical two- and three-phase reactors with their fields of application and their limits. For multiphase reactors with well-defined properties, they are able to design reactor dimensions and to calculate suitable process conditions.

Content
Theory of mass transfer and reaction in multiphase reacting systems (film model); technical reactors for two-phase systems (gas-liquid, liquid-liquid, gas-solid); reactors for three-phase systems.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload
- Attendance time (Lecture): 30 hrs
- Homework: 50 hrs
- Exam Preparation: 40 hrs

Literature
Skript "Chemische Verfahrenstechnik II"

M 5.28 Module: Chem-Plant [M-CIWVT-104461]

Coordinators: Prof. Dr. Sabine Enders
Prof. Dr.-Ing. Tim Zeiner

Organisation: KIT Department of Chemical and Process Engineering

Part of: Technical Supplement Course
Specialized Course I / Thermal Process Engineering (Usage from 10/1/2024)
Specialized Course I / Technical Thermodynamics (Usage from 4/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	5	1

Mandatory			
T-CIWVT-109127	Chem-Plant	4 CP	Enders, Zeiner

Prerequisites
None

Competence Goal
The students are able to apply the knowledge of their academic education for the design of a concretely chemical plant and they are able to publish the obtained results.

Content
Design of a complete chemical plant for the production of selected product, participation on the Chem-Plant competition (organized by VDI)

Workload

- Attendance time (Lecture): 10 h
- Projekt work: 60 h
- Presentations and Conference participation: 50 h

M 5.29 Module: Circular Economy [M-CIWVT-106881]

Coordinators: Prof. Dr.-Ing. Dieter Stapf
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	2 terms	German	4	1

Mandatory			
T-CIWVT-113815	Circular Economy	6 CP	Stapf

Assessment
The learning control ist an Oral exam on lectures, exercises and case studies, lasting approx. 30 minutes.

Prerequisites
None.

Competence Goal
The students understand important material systems and essential process steps of the provision and recycling of mineral and metallic raw materials and anthropogenic carbon. With the aim of closing cycles, they can use methods of process evaluation, such as analysis and assessment of process chains using efficiency indicators.

Content
Introduction to transition in resources and technologies towards a sustainable circular economy. Knowledge acquisition in system analysis, in process efficiency assessment and in sustainability evaluation. Motivation for process engineering research and development in the field of sustainable raw material supply of a climate-neutral society:

- Material flow and process knowledge of the primary and the recycling industries
- Methodological knowledge (business management basics of relevance, material flow analysis, determination of performance indicators)

Module Grade Calculation
The module grade is the grade of the oral exam.

Additional Information
The number of participants is limited to 10.
Participation is not possible if the profile subject Circular Economy was taken in the Bachelor's program.

Workload

- Attendance time: Lectures and exercises: 45 h
- Self-study: Wrap up lectures: 45 h
- Exam preparation: 90 h

5.30 Module: Combustion and Environment [M-CIWVT-104295]

Coordinators: Prof. Dr.-Ing. Dimosthenis Trimis
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Energy Process Engineering
Specialized Course I / Environmental Process Engineering
Specialized Course I / Combustion Technology

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108835	Combustion and Environment	4 CP	Trimis

Assessment
Learning Control is an oral examination with a duration of about 20 minutes.

Prerequisites
None

Competence Goal

- The students are able to describe and explain why it is import to protect environment.
- The students are able to name the major combustion pollutants and describe the effect on the environment.
- The students understand the physicochemical mechanisms of the formation of different pollutants in the combustion process.
- The students are able to name and describe primary measures to reduce emissions.
- The students understand the limitations of primary measures and are able to name and describe secondary measures to reduce emissions.
- The students understand and can assess differences of emissions from engine and gas turbine combustion.

Content

- Importance of environmental protection.
- Combustion pollutants and their effects.
- Pollutant formation mechanisms
- Combustion-related measures (primary measures) to reduce emissions.
- Exhaust gas cleaning: secondary measures to reduce emissions.
- Emissions from engine combustion and from combustion in gas turbines.

Workload
Lectures: 30 h

Homework: 60 h

Exam preparation: 30 h

M 5.31 Module: Combustion Technology [M-CIWVT-103069]

Coordinators: Prof. Dr.-Ing. Dimosthenis Trimis
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Fuel Technology
Specialized Course I / Energy Process Engineering
Specialized Course I / Combustion Technology

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-106104	Combustion Technology	6 CP	Trimis

Assessment
Learning Control is an oral examination with a duration of about 20 minutes (section 4 subsection 2 SPO). Grade of the module is the grade of the oral examination.

Prerequisites
None

Competence Goal

- The students are able to describe and explain the characteristics of the different flame types.
- The students can quantitatively estimate/calculate major combustion characteristics like flame temperature and flame velocity. They further understand the physicochemical mechanisms affecting flammability limits and quenching distances.
- The students understand and can assess the influence/interaction of turbulence, heat and mass transfer to reacting flows.
- The students understand the flame structure and the hierarchical structure of reaction kinetic mechanisms.
- The students understand and can assess the influence of interaction between different time scales of chemical kinetics and fluid flow in reacting flows.
- The students are able to assess and evaluate burner operability with regard to the application.

Content

- Introduction and significance of combustion technology
- Thermodynamics of combustion: Mass and energy/enthalpy balances
- Equilibrium composition
- Flame temperature
- Reaction mechanisms in combustion processes
- Laminar flame velocity and thermal flame theory
- Kinetics related combustion characteristics and experimental characterization: laminar flame velocity, flammability limits, ignition temperature, ignition energy, ignition delay time, quenching distance, flash point, octane and cetane number
- Turbulent flame propagation
- Industrial burner types

Workload

- Lectures and Exercises: 45 h
- Homework: 25 h
- Exam Preparation: 110 h

5.32 Module: Commercial Biotechnology [M-CIWVT-104273]

Coordinators: Prof. Dr. Ralf Kindervater
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Biopharmaceutical Process Engineering
Specialized Course I / Bioresource Engineering
Specialized Course I / New Bio-Production Systems - Electro-Biotechnology (Usage from 4/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	5	1

Mandatory			
T-CIWVT-108811	Commercial Biotechnology	4 CP	Kindervater

Assessment
Learning control is a written exam lasting 60 minutes.

Prerequisites
None

Module Grade Calculation
The module grade is the grade of the written exam.

Workload

- Lectures: 30 h
- Homework: 50 h
- Exam Preparation: 40 h (about one week)

M 5.33 Module: Computational Fluid Dynamics [M-CIWVT-103072]

Coordinators: Prof. Dr.-Ing. Hermann Nirschl
Organisation: KIT Department of Chemical and Process Engineering
Part of: Advanced Fundamentals (CIW)
Technical Supplement Course

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-106035	Computational Fluid Dynamics	6 CP	Nirschl

Assessment
Learning control is a written examination lasting 90 minutes

Prerequisites
None

Competence Goal
Learning the fundamentals of CFD for the calculation of flow problems.

Content
Navier-Stokes equitations, numerical schemes, turbulence, multiphase flows.

Module Grade Calculation
The module grade is the grade of the written examination.

Workload

- Attendance time (Lecture): 64 h
- Homework: 56 h
- Exam Preparation: 601 h

Literature

- Nirschl: Skript zur Vorlesung CFD
- Ferziger, Peric: Numerische Strömungsmechanik
- Oertel, Laurien: Numerische Strömungsmechanik

M 5.34 Module: Computational Fluid Dynamics and Simulation Lab [M-MATH-106634]

Coordinators: PD Dr. Mathias Krause
Organisation: KIT Department of Mathematics
Part of: Technical Supplement Course (Usage from 4/1/2024)
Specialized Course I / Mechanical Process Engineering (Usage from 4/1/2024)
Specialized Course I / Modelling and Simulation

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German/English	4	2

Mandatory			
T-MATH-113373	Computational Fluid Dynamics and Simulation Lab	4 CP	Frank, Krause, Simonis, Thäter

Assessment
For their final project, students prepare a written report, usually 10-15 pages long, which is graded.

Prerequisites
none

Competence Goal
Students are able to jointly model problems beyond their own discipline and simulate them on high-performance computers. They have acquired a critical distance to results and their presentation. They can defend the results of projects in disputes. They have understood the importance of stability, convergence and parallelism of numerical methods from their own experience and are able to evaluate errors in modeling, approximation, computing and presentation.

Content
Lecture part: Introduction to modeling and simulations, introduction to associated numerical methods, introduction to associated software and high-performance computer hardware

Own group work: Working on 1-2 projects in which modelling, discretization, simulation and evaluation (e.g. visualization) are carried out for specific topics from the catalog. The catalog includes e.g: Diffusion processes, turbulent flows, multiphase flows, reactive flows, particle dynamics, optimal control and optimization under constraints, stabilization methods for advection-dominated transport problems.

Module Grade Calculation
The module grade is the grade of the final project.

Workload
Total workload: 120 hours

Attendance: 60 hours

- lectures and examination

Self-studies: 60 hours

- follow-up and deepening of the course content,
- work on projects and report,
- literature study and internet research relating to the course content

Recommendations
Basic knowledge of the analysis of boundary value problems and of numerical methods for differential equations is recommended. Knowledge of a programming language is strongly recommened.

M 5.35 Module: Computer-Aided Reactor Design [M-CIWVT-106809]

Coordinators: Dr.-Ing. Martin Kutscherauer
Prof. Dr.-Ing. Gregor Wehinger
Organisation: KIT Department of Chemical and Process Engineering
Part of: Specialized Course I / Chemical Process Engineering (Usage from 10/1/2024)
Specialized Course I / Modelling and Simulation

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German/English	4	1

Mandatory			
T-CIWVT-113667	Computer-Aided Reactor Design	6 CP	Wehinger

Assessment
Learning control is an examination of another type:
The project assignment will be evaluated based on the source code, the poster, and its presentation.

Prerequisites
None.

Competence Goal
The students are able to:

- describe and apply the mathematical and physical principles of chemical reaction engineering models,
- apply the Python software independently and thoroughly to the reactor models,
- develop a reaction engineering model for an unknown chemical process and solve problems of reactor design,
- analyse and evaluate the results obtained by comparing them with current literature,
- recognise and evaluate errors and uncertainties in the model,
- represent, present and critically discuss the results they have obtained in an appropriate form.

Content

1. Introduction to modeling and simulation of chemical reactors
2. Balance equations of chemical reactors
3. Processes in porous systems
4. Homogeneous and heterogeneous reactor models
5. Applied numerical methods
6. Reactor design

Module Grade Calculation
The module grade ist the grade of the examiation of another type.

Additional Information
Learning control is an examination of another type: The project work is assessed on the basis of the source code, the poster and its presentation.

Workload

- Attendance time: 45 h
- Homework: 105 h
- Exam preparation: 30 h

Recommendations
Knowledge about Chemical Process Engineering I and II is recommended.

Literature

- Jakobsen: Chemical Reactor Modeling; 2014, Springer
- Salmi et al.: Chemical reaction engineering: a computer-aided approach; 2020, de Gruyter

5.36 Module: Control of Distributed Parameter Systems [M-CIWVT-106318]

Coordinators: Prof. Dr.-Ing. Thomas Meurer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2023)
Specialized Course I / Automation and Process Systems Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German/English	5	1

Mandatory			
T-CIWVT-112826	Control of Distributed Parameter Systems	6 CP	Meurer

Assessment
Learning control is an oral examination with a duration of about 45 minutes.

Prerequisites
none

Competence Goal
Students gain an in-depth understanding of control design methods for distributed-parameter systems, whose mathematical modeling leads to partial differential equations. They understand the underlying mathematical concepts and are able to apply them to new problems. Students are able to analyze and verify the system and control theory properties of distributed parameter systems. They have a comprehensive understanding of control design methods and are able to apply these methods independently to control problems involving partial differential equations.

Content
This module provides an introduction to the modeling, analysis, control, and numerical simulation of distributed-parameter systems described by partial differential equations (PDEs). The modeling of processes leads to a distributed-parameter description in the form of PDEs when, in addition to temporal dynamics, spatial or property-distributed effects must also be taken into account. Examples include diffusion-convection-reaction systems in process engineering, flexible structures in mechanics and mechatronics, coupled multi-agent systems in robotics, and quantum mechanical and fluid dynamic systems. The module covers the following topics:

- Introduction to control systems with distributed parameters (mathematical modeling, classification, solution methods, basic principles of control and observer design)
- Analysis and synthesis in the frequency domain (input-output stability, output feedback)
- Analysis and synthesis in state space (controllability and observability, stability theory for distributed parameter systems, control design using state feedback, backstepping)
- Flatness-based methods for trajectory planning and follow-up control

Module Grade Calculation
Modulnote ist die Note der mündlichen Prüfung.

Workload
Attendance time: Lectures: 30 hrs. Exercises: 15 hrs.

Self-study: 60 hrs.

Exam preparation: 75 hrs.

Literature

5.37 Module: Cryogenic Engineering [M-CIWVT-104356]

Coordinators: Prof. Dr.-Ing. Steffen Grohmann
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Technical Thermodynamics

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	4	1

Mandatory			
T-CIWVT-108915	Cryogenic Engineering	6 CP	Grohmann

Assessment
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

Prerequisites
None

Competence Goal
Understanding the principle and modelling of regenerative cryocoolers; Understanding and applying of essential engineering methods and components for the conception and design of low-temperature plants and cryostat systems; Understanding of laboratory measurement principles, assessing and applying of sensors and instruments for cryogenic measurement tasks and analysing of measurement uncertainties

Content
Cryogenic applications; Regenerative cooling with cryocoolers; Fundamentals of low-temperature plant and cryostat design, including fluid mechanics and heat transfer, thermal contacts and thermal insulation, cryogenic pumping of gasses, regulations, design components and safety; General principles of measurement and uncertainties as well as cryogenic temperature, pressure and flow measurement

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 45 h
- Homework: 45 h
- Exam Preparation: 90 h

M 5.38 Module: Data Analysis and Statistics [M-CIWVT-104345]

Coordinators: apl. Prof. Dr. Gisela Guthausen
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Gas Particle Systems
Specialized Course I / Mechanical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108900	Data Analysis and Statistics	4 CP	Guthausen

Assessment
Learning control is an oral examination lasting approx. 30 minutes.

Prerequisites
None

Competence Goal
The students are familiar with statistical data treatment methods and are able to judge. Out of the variety of statistical approaches for data analysis they are able to choose the most promising tool for a given question.

Content
Introduction into statistics and its application in data analysis of analytical data sets. Starting with descriptive statistics with typical quantities and parameters like standard deviation, distributions and their applications leads to statistical tests, which are needed in approximation and regression. Chemometric data treatment and statistic processing of large data sets will be studied on the example of multivariate approaches and machine learning for revealing correlations. Data management will be addressed, too.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 h
- Homework: 30 h
- Exam Preparation: 60 h

M 5.39 Module: Data-Based Modeling and Control [M-CIWVT-106319]

Coordinators: Prof. Dr.-Ing. Thomas Meurer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2023)
Specialized Course I / Automation and Process Systems Engineering (Usage from 10/1/2023)
Specialized Course I / Modelling and Simulation

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	5	1

Mandatory			
T-CIWVT-112827	Data-Based Modeling and Control	6 CP	Meurer

Assessment
Learning control is an oral examination with a duration of about 45 minutes.

Prerequisites
none

Competence Goal
Students have an in-depth understanding of methods and concepts of data-based modeling and control of dynamic systems, including machine learning techniques and corresponding optimization methods. They understand the underlying mathematical concepts and can apply them to new problems. They are able to apply these methods independently to specific problems and familiarize themselves with further literature on their own.

Content
The module covers basic concepts and fundamentals of data-based approaches for modeling and control design for dynamical systems and processes. Data-based approaches for modeling, also called system identification, are used to identify a mathematical description of the considered system from the available input and output data. Data-based approaches for control design compute the controller without an a priori known model of the system. Extensions to learning-based control are addressed, where in principle machine learning techniques are used to learn a model or a controller for a given system.

Problem sets are considered in the exercises to apply the developed methods.

Module Grade Calculation
The grade of the module is the grade of the oral exam.

Workload
Attendance time: Lectures: 30 hrs. Exercises: 15 hrs.

Self-study: 75 hrs.

Exam preparation: 60 hrs.

T-CIWVT-113709	Data-Driven Process Engineering Models in Python - Exam	1 CP	Rhein

M 5.41 Module: Design of a Jet Engine Combustion Chamber [M-CIWVT-105206]

Coordinators: Dr.-Ing. Stefan Raphael Harth
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2019)
Specialized Course I / Energy Process Engineering (Usage from 10/1/2019)
Specialized Course I / Combustion Technology (Usage from 10/1/2019)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	5	1

Mandatory			
T-CIWVT-110571	Design of a Jet Engine Combustion Chamber	6 CP	Harth

Assessment
Learning control is an examination of another type.

The module grade consists of the grade of the oral examination (35 points maximum) and the cooperation / presentation during the project (65 points maximum).
The learning control ist passed when at least 45 points are achieved.

Prerequisites
None

Competence Goal

- The students are able to apply the relevant design parameters in order to design a jet engine combustor.
- The students are able to evaluate design modifications due to the performance of a jet engine combustor.
- The students are able to review literature studies and use them for their design aims.
- The students learn to work target oriented following a time schedule.
- The students learn to work in a team and to exchange information between the teams by definition of interfaces.
- The students learn to present clearly and in an acceptable time the work progress and the most important results.

Content
At the beginning the description and operating mode of a jet engine with emphasis on the combustor is explained in 4 lessons. Afterwards the design of the combustor based on geometrical boundary conditions (engine casing) and the performance conditions will start. The tasks to be solved for the design are the combustor aerodynamic (pressure loss, air split), thermal management (temperature distribution, wall cooling, material), calculation of emissions and the construction of the combustor. In order to solve the tasks the students have to be organized in groups which are responsible for the tasks mentioned. The work progress will be controlled by a time schedule and regular presentations. The complete design will be discussed in a final presentation.

Module Grade Calculation
The module grade is the grade of the examnation of another type.

Workload

- Attendance time (Lecture): 30 h
- Homework: 45 h
- Project: 80 h
- Exam Preparation: 45 h

Literature

- Lefebvre, Gas Turbine Combustion
- Rolls-Royce plc, the jet engine
- Müller, Luftstrahltriebwerke Grundlage, Charakteristiken, Arbeitsverhalten

M 5.42 Module: Design of Micro Reactors [M-CIWVT-104286]

Coordinators: Prof. Dr.-Ing. Peter Pfeifer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Chemical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	5	1

Mandatory			
T-CIWVT-108826	Design of Micro Reactors	6 CP	Pfeifer

Assessment
The examination is an oral examination with a duration of about 25 minutes (section 4, subsection 2, number 2, SPO).

Prerequisites
None

Competence Goal
The students are able apply the methods of process intensification by microstructuring of the reaction zone and are capable of analyzing the advantages and disadvantages while transferring given processes into microreactors. With knowledge of special production processes for micro reactors, students are able to design microstructured systems in terms of heat exchange and to analyze the possibilities of transferring processes from conventional technology into the microreactor with regard to heat transfer performance. They understand also how the mechanisms of mass transport and mixing interact in microstructured flow mixers, and are able to apply this knowledge to the combination of mixing and reaction. They can also analyze possible limitations in the process adaptation and are thus able to design microstructured reactors for homogeneous reactions appropriately. The students understand the significance of the residence time distribution for the conversion and selectivity and are capable of analyzing the interaction of mass transport by diffusion and hydrodynamic residence time in microstructured equipment in given applications.

Content
Basiswissen zu mikroverfahrenstechnischen Systemen: Herstellung von mikrostrukturierten Systemen und Wechselwirkung mit Prozessen, Intensivierung von Wärmetausch und spezielle Effekte durch Wärmeleitung, Verweilzeitverteilung in Reaktoren und Besonderheiten in mikrostrukturierten Systemen, strukturierte Strömungsmischer (Bauformen und Charakterisierung) und Auslegung von strukturierten Reaktoren hinsichtlich Stoff- und Wärmetransport

Workload
Lectures: 45 h

Homework: 42 h

Exam preparation: 60 h (about 1.5 weeks)

5.43 Module: Development of an Innovative Food Product [M-CIWVT-104388]

Coordinators: Dr.-Ing. Ulrike van der Schaaf
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Food Process Engineering (Usage from 4/1/2025)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each term	2 terms	German	5	2

Mandatory			
T-CIWVT-108960	Development of an Innovative Food Product	3 CP	van der Schaaf
T-CIWVT-111010	Development of an Innovative Food Product - Presentation	3 CP	van der Schaaf

Assessment
The learning control consists of:

- Seminar/ Presentation
- written elaboration/ exposé

Prerequisites
None

Competence Goal
Students can use their knowledge on food products and their processing to develop an innovative food product of their own. They also can develop a suitable process for its production with regards to energy efficiency and sustainability. Students are able to use basic principles of scale up in the food industry and to use strategies to ensure food quality and safety on a large scale. They can evaluate these concepts regarding their own food product. They understand basic concepts of marketing and packaging technology and can apply those concepts to their innovative product and analyse them. Students can apply basic principles of project management and evaluate them regarding the development of their food product.

Content
Development of a food product consumer ready (aspects included are amongst others food quality and safety, scale up, energy efficiency, sustainability, marketing and packaging); project management

Module Grade Calculation
50 % presentation (individual grade), 50 % written elaboration (group grade)

Additional Information
The module lasts two semesters and usually starts in the summer semester.

There is an opportunity to participate in the competition "EcoTrophelia".

The maximum number of participants is limited. Admission is based on a selection interview.

Workload

- Lab work: 100 h
- Homework: 20 h
- Written elaboration: 30 h
- Seminar and presentation: 30 h

M 5.44 Module: Digital Design in Process Engineering [M-CIWVT-105782]

Coordinators: TT-Prof. Dr. Christoph Klahn
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2021)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	4	1

Mandatory			
T-CIWVT-111582	Digital Design in Process Engineering - Laboratory	3 CP	Klahn
T-CIWVT-111583	Digital Design in Process Engineering - Oral Examination	3 CP	Klahn

Assessment
The learning control consists of:

1. Laboratory, ungraded
2. Oral exam lasting approx. 30 minutes

The laboratory is a prerequisite for the oral exam.

Prerequisites
None.

Competence Goal

- Understanding an applying the basics of 3D geometry modeling
- Identification of typical errors and artifacts in 3D models
- Selection of suitable methods for optimization, design and validation

Content
Digital design for Process Engineering introduces tools and methods for efficiently designing parts in process engineering.

- Computer Aided Design CAD (Autodesk Inventor)
- Topology optimization
- Parametric design and design automation (Grasshopper Rhino)
- Workflows of optimization, design and numerical validation

Module Grade Calculation
The module grade ist the grade of the oral exam.

Workload

- Lectures an Lab: 60 hrs
- Homework (CAD-design): 80 hrs
- Exam preparation: 40 hrs

Recommendations
The module is recommended as preparation for the modul Additive Manufacturing for Process Engineering [M-CIWVT-105407].

M 5.45 Module: Digitization in Particle Technology [M-CIWVT-104973]

Coordinators: Dr.-Ing. Marco Gleiß
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Gas Particle Systems
Specialized Course I / Mechanical Process Engineering
Specialized Course I / Automation and Process Systems Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	2

Mandatory			
T-CIWVT-110111	Digitization in Particle Technology	4 CP	Gleiß
T-CIWVT-114694	Digitization in Particle Technology - Project Work	2 CP	Gleiß

Assessment
Learning control consits of two components:

- Completed coursework (ungraded): Project presentation
- Oral examination lasting approx. 30 minutes.

Prerequisites
None.

Competence Goal
Capability to develop integrated strategies for the digitalization of processes in particle technology. This includes the development of methods but also the application of numerical methods.

The students work on the project as a team. The individual topics pick up on the context of the lecture. In addition to the subject-specific topics of the lecture, soft skills such as the ability to work in a team, independent planning and processing of a project and presentation skills are strengthened.

Content
Teaching methods for the systematic development of engineering-scientific digitization strategies for particle technology.

This includes multiscale modeling, the mathematical fundamentals of process modeling and simulation, model predictive control as well as basics of online and in-situ process analysis. Furthermore, the metrological acquisition of large amounts of data requires complex evaluation methods for further processing and reduction of the generated data. Machine learning methods can be used for this purposeThe developments in digitalization in particle technology are supported by various practical examples. In addition to the lecture a practical exercise in the form of a project work takes place.

Project work: Application of what has been learned to a new problem.

Module Grade Calculation
The Module grade is the grade of the oral examination.

Workload

- Lecture: 15 h, Exercise: 15 hrs
- Project work: 30 hrs
- Homework: 60 hrs
- Exam preparation: 60 hrs

M 5.46 Module: Drying Technology [M-CIWVT-104370]

Coordinators: Prof. Dr.-Ing. Wilhelm Schabel
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Food Process Engineering
Specialized Course I / Applied Rheology
Specialized Course I / Thermal Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108936	Drying Technology	6 CP	Schabel

Assessment
The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO).

Prerequisites
None

Competence Goal
Students are able to identify and design a drying process. They will have an overview on the state of the art in drying technology science.

They are able to interpret, evaluate and select a proper drying process.

The qualification goal is to learn proper methods and drying technology basics in order to transfer this fundamental knowledge to new processes and apparatus.

Content
Introduction to drying technology and industrial applications; Modeling of heat mass transfer during drying and modeling of the entire drying process ; Determination of material properties, sorption, diffusion; Determination of typical drying curves and regimes

Fundamentals in polymer film drying and drying of porous materials; Basic principles of spray drying, fluidized bed drying, microwave drying, infrared drying and freeze drying.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 45 h
- Homework: 90 h
- Exam Preparation: 45 h

M 5.47 Module: Dynamics of Process Engineering Systems [M-CIWVT-107037]

Coordinators: Dr.-Ing. Pascal Jerono
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2025)
Specialized Course I / Mechanical Process Engineering (Usage from 4/1/2025)
Specialized Course I / Automation and Process Systems Engineering (Usage from 4/1/2025)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-114105	Dynamics Process Engineering Systems - Prerequisite	3 CP	Jerono
T-CIWVT-114106	Dynamics of Process Engineering Systems - Exam	3 CP	Jerono

Assessment
The Learning control consists of two partial achievements:

1. Examination of another type.
2. Oral examination lasting approx. 45 minutes.

Module Grade Calculation
The module grade ist the CP-weighted average of the two partial achievements.

Literature

- P. Jerono und T. Meurer: Dynamik verfahrens-technischer Systeme, Vorlesungsskript.
- B. Brogliato, R. Lozano, B. Maschke, O. Egeland: Dissipative systems analysis and control, Springer, 2007.

5.48 Module: Electrification of the Process Industry [M-CIWVT-107653]

Coordinators: Prof. Dr.-Ing. Frederik Scheiff
Organisation: KIT Department of Chemical and Process Engineering
Part of: Specialized Course I / Fuel Technology (Usage from 4/1/2026)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-115000	Electrification of Process Industry	4 CP	Scheiff

Assessment
Learning control is an oral exam lasting approx. 25 minutes.

Prerequisites
None.

Competence Goal
Students are able to

- distinguish different methods of electrical energy supply to process-industry applications
- based on chemical and electrical fundamentals,
- to perform basic engineering calculations, and
- to critically assess these methods with respect to process-, electrical-, and materials-engineering criteria.

Students are capable of:

- evaluating current developments in the field of electrification,
- reflecting on application areas and their contribution to sustainability,
- performing basic techno-economic assessments, and
- adressing interdisciplinary interfaces between process engineering, electrical engineering, and materials science.

Content
Process Industry and its connection to the Energy System

- impact of process industry and its energy consumption
- German energy system (infrastructure, energy market, regulatory framework)

Electrical Engineering and Physical Fundamentals

- Basic concepts of electrical engineering (current, voltage, etc.)
- Electromagnetism, electrical energy converters, materials used in electrical engineering

Electrification of Thermal Energy Demands

- Direct electric heating (ohmic heating, inductive heating, plasma, microwaves)
- Indirect methods (heat pumps, power-to-steam, special processes, technology comparison of combustion vs. (in)direct electrification)

Electrification of Chemical Enthalpy Demands

- Electrolysis, electrified organic syntheses, electrocatalysis

Electrification of Mechanical Drives

Module Grade Calculation
The module grade is the grade of the oral exam.

Workload

- Attendance time: 30 hrs
- Homework: 60 hrs
- Exam preparation: 30 hrs

M 5.49 Module: Electrobiotechnology [M-CIWVT-106518]

Coordinators: Prof. Dr.-Ing. Dirk Holtmann
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2023)
Specialized Course I / New Bio-Production Systems - Electro-Biotechnology

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	5	2

Mandatory			
T-CIWVT-113148	Electrobiotechnology	4 CP	Holtmann
T-CIWVT-113829	Electrobiotechnology Seminar	2 CP	Holtmann

M 5.50 Module: Electrocatalysis [M-ETIT-105883]

Coordinators: Prof. Dr. Ulrike Krewer
Dr. Philipp Röse

Organisation: KIT Department of Electrical Engineering and Information Technology

Part of: Technical Supplement Course (Usage from 4/1/2022)
Specialized Course I / New Bio-Production Systems - Electro-Biotechnology (Usage from 4/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
5 CP	graded	Each summer term	1 term	English	4	3

Mandatory			
T-ETIT-111831	Electrocatalysis	6 CP	Röse

Assessment
The examination takes place in form of a written examination lasting 120 minutes.

Prerequisites
none

Competence Goal
Students have a well-grounded knowledge of electrocatalytic energy technologies for the conversion and storage of electrical energy in chemicals (Power-to-X). They know the functional principle of state-of-the-art electrocatalysts in fuel cells and electrolysis and understand the underlying electrochemical and physical processes. Participation in the course enables the students to assess and understand the relationship between electrode structure and their selectivity, performance and stability. Furthermore, the students learn the theoretical basics of experimental methods that are relevant for the investigation of model electrodes and technical cells.

Content
Lecture:

- **Basics, concepts and definitions within the Power-to-X context:** Catalysis and electrocatalysis; activity and selectivity; fundamentals of electrochemical processes, elementary steps involving adsorbed intermediates.

- The role of intermediates: Electron transfer without intermediates, multi-electron transfer with intermediates; differences in adsorption energies of intermediates and active surfaces

- **Theoretical treatment of electron transfer reactions:** Tunneling processes at electrodes; electron transfer reactions (Marcus theory); role of electrode material on rate of electrode reaction.

- Measurement methods for the investigation of electrocatalytic reactions: Determination of the effective surface; Determination of the activity of electrochemically active species; Determination of the selectivity; Operando measurement methods

- Technically important electrocatalytic reactions and processes: The oxygen reduction reaction (ORR) and evolution reaction (OER); the chlorine evolution reaction.

Module Grade Calculation
The module grade is the grade of the written examination.

Workload
attendance in lectures: 30 * 45 min. = 22,5 h

attendance in exercises: 15 * 45 min. = 11,25 h

preparation and follow up of the lectures and practice: 76.25 hours (approx. 1.75 hours per lecture or exercise)

preparation of examination and attendance in examination: 40 h

A total of 150 h = 5 CR

Recommendations
The participation of the module "Electrochemical Energy Technologies" is helpful.

M 5.51 Module: Electrochemistry [M-CHEMBIO-106697]

Coordinators: Prof. Dr. Dominic Bresser
Organisation: KIT Department of Chemistry and Biosciences
Part of: Specialized Course I / New Bio-Production Systems - Electro-Biotechnology (Usage from 4/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
3 CP	graded	Irregular	1 term	German	4	1

Mandatory			
T-CHEMBIO-109773	Electrochemistry	3 CP	

Prerequisites
None

5.52 Module: Emulsification Technology [M-CIWVT-107439]

Coordinators: Dr.-Ing. Ulrike van der Schaaf
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2026)
Specialized Course I / Food Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-114611	Emulsification Technology	4 CP	van der Schaaf

Assessment
Learning control is an oral exam lasting approx. 30 minutes.

Prerequisites
None

Competence Goal
At the end of the course, students possess an advanced, scientifically sound understanding of the physicochemical and process engineering fundamentals of emulsion formation and stabilization. They are able to analyze droplet break-up and stabilization phenomena in liquid systems and to implement and design corresponding processing equipment. Students can purposefully select and evaluate emulsifiers and stabilizers with respect to their molecular structure and functionality, assess the relevance of interfacial tension and interfacial elasticity for emulsion stability, and choose appropriate methods for the characterization and evaluation of product quality. Furthermore, they are capable of critically assessing current developments in emulsion technology and transferring this knowledge to complex engineering problems.

Content
Fundamentals of droplet break-up and stabilization in liquid environments; equipment-oriented implementation: plant configuration and process design; process–property relationships; emulsifiers and stabilizers: molecular structure and characteristics; relevance and characterization of interfacial tension and interfacial elasticity for emulsion stabilization; assessment of product quality: fundamentals and measurement methods; recent developments.

Module Grade Calculation
The module grade ist the grade of the oral exam.

- Homework: 45 h
- Exam Preparation: 45 h

M 5.56 Module: Estimator and Observer Design [M-CIWVT-106320]

Coordinators: Dr.-Ing. Pascal Jerono
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2023)
Specialized Course I / Automation and Process Systems Engineering (Usage from 10/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	5	1

Mandatory			
T-CIWVT-112828	Estimator and Observer Design	6 CP	Jerono

Assessment
Learning control is an oral examination with a duration of about 45 minutes.

Competence Goal
Students will gain an in-depth understanding of the concepts and methods used to estimate and identify the state of dynamic systems and will be familiar with their advantages and disadvantages. In addition, students will be able to analyze the observability and detectability properties of the underlying system dynamics and use this information to design suitable state observers for practical applications. Students are familiar with various numerical solution approaches, understand how they work, and can implement them for estimation and observer design tasks.

Content
State feedback control relies on the availability of the full state vector, which is in general not available from measurements. Moreover determining the states (or parameters) of a dynamical systems is of interest on its own as this allows to obtain insights into the system dynamics or to estimate quantities that are not or hardly measurable. The lecture addresses basic concepts of estimation and identification methods and the design of optimal state observers for linear and nonlinear dynamical systems both in a continuous and a discrete time setting. This includes:

- Introduction to fundamental concepts for system identification and state estimation
- State-space approaches for system identification
- Analysis of observability and detectability
- Design of linear and nonlinear observers as well as optimal state estimators (Kalman-Bucy and Kalman Filters)
- Numerical methods

Module Grade Calculation
The grade of the module is the grade of the oral exam.

Workload
Attendance time: Lectures: 30 hrs. Exercises: 15 hrs.

Self-study: 60 hrs.

Exam preparation: 75 hrs.

Literature

M 5.57 Module: Extrusion Technology in Food Processing [M-CIWVT-105996]

Coordinators: PD Dr.-Ing. Azad Emin
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2022)
Specialized Course I / Food Process Engineering (Usage from 10/1/2022)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	English	4	1

Mandatory			
T-CIWVT-112174	Extrusion Technology in Food Processing	4 CP	

Assessment
Learning control is an oral exam lasting about 20 minutes.

Prerequisites
None.

Competence Goal
Students will learn the fundamental principles of extrusion technology and its capabilities as well as the reasons behind its wide use by food industry. They will learn how various conventional food products are manufactured using this technology. Students will be able to approach a development of food more systematically by applying the principles of product design. They will also be able to combine and apply what they have learned in other courses/subjects during their studies in a multidisciplinary approach necessary for extruded food design. Students will understand how extrusion technology can be used in targeted ways to open up new opportunities for sustainable food transition.

Content
This course covers the principles of extrusion, the design of extrusion processes, and the formulation of extruded products. Moreover, the course gives an introduction to more fundamental topics such as biopolymer structure, reactivity, rheology and process control. In addition to the extrusion of conventional products, the design of sustainable and innovative food products such as plant-based meat and sea-food alternatives as well as upcycled food side-streams, will be discussed. While focusing on the fundamentals as well as on the state-of-the-art extrusion technology, the course is very practically oriented, and includes a practical demonstration of the principles learned.

Module Grade Calculation
The module grade ist the grade of the oral exam.

Additional Information
The course will take place as a block lecture. Registration required! Further information can be found in the course catalog.

Workload

- Attendance time: 30 h
- Self-study: 30 h
- Exam preparation: 60 h

Literature
Will be announced.

M 5.58 Module: Fluidized Bed Technology [M-CIWVT-104292]

Coordinators: Prof. Dr. Reinhard Rauch
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Fuel Technology
Specialized Course I / Energy Process Engineering
Specialized Course I / Gas Particle Systems

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108832	Fluidized Bed Technology	4 CP	Rauch

Assessment
The examination is an oral examination with a duration of 20 minutes (section 4 subsection 2 number 2 SPO).

The grade of the oral examination is the module grade.

Prerequisites
None

Competence Goal
Understanding of fluidized beds, design and calculation of fluidized beds incl. gas distributors, advantages and disadvantages of fluidized beds and industrial applications

Content
Fundamentals of fluidized beds, explanation of bubbling circulating and dual fluidized beds, calculation of minimum fluidization velocity and transport velocity, classification of particles, design of gas distributors, theory of bubbles in fluidized beds, heat transfer, cold flow models and CFD simulation for design of fluidized beds, industrial examples of fluidized beds

Workload

- Lectures: 30 h
- Homework: 50 h
- exam preparation: 40 h

Literature

- Fluidized Beds, Jesse Zhu, Bo Leckner, Yi Cheng, and John R. Grace, Chapter 5 in Multiphase Flow Handbook. Sep 2005 , ISBN: 978-0-8493-1280-9, https://doi.org/10.1201/9781420040470.ch5

M 5.59 Module: Food Chemistry Basics [M-CHEMBIO-104620]

Coordinators: Prof. Dr. Mirko Bunzel
Organisation: KIT Department of Chemistry and Biosciences
Part of: Technical Supplement Course
Specialized Course I / Food Process Engineering
Specialized Course I / Bioresource Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	5	1

Mandatory			
T-CHEMBIO-109442	Food Chemistry Basics	4 CP	Bunzel

Prerequisites
None

Workload

- Lectures: 30 h
- Homework: 45 h
- exam preparation: 45 h

M 5.60 Module: Food Processing in Practice [M-CIWVT-107679]

Coordinators: Dr.-Ing. Ulrike van der Schaaf
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2026)
Specialized Course I / Food Process Engineering (Usage from 4/1/2026)

Credits	Grading	Recurrence	Duration	Language	Level	Version
2 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-109129	Seminar of Food Processing in Practice with Excursion	2 CP	van der Schaaf

Assessment
Learning control is an oral exam lasting approx. 20 minutes.

Competence Goal
Students are able to use their academic knowledge on the processing and characterization of food products to evaluate industrially relevant food processes and techniques. In teams, they can discuss and solve complex tasks that concern the production and evaluation of food products and that stem from industrial applications. Students have the skills to present the results of their work in a scientific manner.

Content
As part of an excursion, students visit selected food processing companies of different sizes - from start-ups to internationally active companies. The companies represent different product groups and processing methods.

This gives students the opportunity to understand process steps learned in other courses in industrial practice in a large-scale context and to analyze differences and special features of food processing depending on company size and production structure.

The seminar is used to prepare for and follow up on the excursion, for in-depth analysis of the manufacturing processes observed and to discuss current industrial issues.

Workload

- Attendance time: Seminar and excursion 30 h
- Homework: 15 h
- Exam preparation: 15 h

5.61 Module: Formulation of (Bio)pharmaceutical Therapeutics [M-CIWVT-104266]

Coordinators: Prof. Dr. Jürgen Hubbuch
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Biopharmaceutical Process Engineering
Specialized Course I / Bioresource Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German	5	1

Mandatory			
T-CIWVT-108805	Formulation of (Bio)pharmaceutical Therapeutics	4 CP	Hubbuch

Assessment
Learning control is an oral exam lasting approx. 15 minutes.

Prerequisites
None

Competence Goal
The students will be able to discuss different development routes for the formulation of pharmaceuticals. The implications of different physiologies for the different formulations will be analyzed. Pro's and con's of different formulations and applications are evaluated.

Content
Fundamentals; Development of formulations for pharmaceuticals; Oral, Parenteral, Dermal, Nasal, Pulmonal; Formulation for Biopharmaceuticals

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Lectures: 30 hrs
- Homework: 60 hrs
- Exam preparation: 30 hrs

M 5.62 Module: Fuel Technology [M-CIWVT-104289]

Coordinators: Dr. Frederik Scheiff
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Fuel Technology
Specialized Course I / Energy Process Engineering
Specialized Course I / Environmental Process Engineering
Specialized Course I / Combustion Technology

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-108829	Fuel Technology	6 CP	Scheiff

Assessment
The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO).

The grade of the oral examination is the module grade.

Prerequisites
None

Competence Goal
The students are enabled to characterize fuel resources and derived fuels / chemical energy carriers and to critically evaluate the processes for conversion of fuel resources to chemical energy carriers with respect to process technology, economy and ecology

Content

- Overview of fuel resources: coal, oil, gas, biomass – process of formation, resources, consumption
- Mining technology
- Characterization and analysis of fuel resources and fuels
- Basics and processes for conversion of fuel resources into chemical energy carriers / fuels
- Processes of fuel conversion: power / heat, mobility, synthesis
- Tools for critical evaluation of process chains: LCA, ecoefficiency analysis

Workload

- Attendance time (Lecture): 45 h
- Homework: 75 h
- Exam Preparation: 60 h

Literature

5.63 Module: Fundamentals of Water Quality [M-CIWVT-103438]

Coordinators: Dr. Michael Wagner
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2024)
Specialized Course I / Water Technology (Usage from 10/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	4	1

Mandatory			
T-CIWVT-106838	Fundamentals of Water Quality	6 CP	Wagner

Assessment
Learning control is an oral exam lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
Students can explain the relationships behind the occurrence of geogenic and anthropogenic compounds in the hydrological cycle. They are able to select adequate methods for the analysis of water constituents and microorganisms in water samples. They are familiar with the associated calculations, and they can compare and interpret the obtained data. They know how to apply different methods, how to analyze relationships and how to critically assess water quality analyses.

Content
Various types of water, legislations, analytical definitions, analytical quality, sampling methods, quick test methods, field investigations, organoleptic determinations, general investigations, optical characterization (turbidity, color, UV, Lambert-Beer`s law, photometry), titrations, acid-base-systems, buffering, main inorganic compounds (anions, cations, occurrence, ion chromatography, titration, complexometry, flame photometry, atomic spectroscopy), heavy metals and metalloids (occurrence and main methods for determination), organic compounds and organic micropollutants (occurrence, thin layer chromatography, high performance liquid chromatography, infrared spectroscopy, gas chromatography), water-specific sum parameters (DOC, AOX, COD, BOD), radioactivity, microbiology.

Module Grade Calculation
The module grade ist the grade of the oral exam.

Workload
Attendance time: 45 h
Preparation/follow-up: 65 h
Examination + exam preparation: 70 h

M 5.64 Module: Gas Particle Measurement Technology [M-CIWVT-104337]

Coordinators: Prof. Dr.-Ing. Achim Dittler
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Gas Particle Systems
Specialized Course I / Mechanical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	5	1

Mandatory			
T-CIWVT-108892	Gas Particle Measurement Technology	6 CP	Dittler

Assessment
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

Prerequisites
None

Competence Goal
Students can independently solve questions concerning gas particle measurement technology by knowledge of the required analysis steps and choice of a particle measurement technology suitable for the task at hand.

Content
Aspects of particle measurement technology; sampling; sample preparation; dispersion; imaging measurement methods; counting methods; separation methods, spectroscopy, gas analysis.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 60 h
- Homework: 90 h
- Exam Preparation: 30 h

M 5.65 Module: Gas Particle Separation Processes [M-CIWVT-104340]

Coordinators: Dr.-Ing. Jörg Meyer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Gas Particle Systems
Specialized Course I / Mechanical Process Engineering
Specialized Course I / Environmental Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-108895	Gas Particle Separation Processes	6 CP	Meyer

Assessment
The examination is an oral examination with a duration of about 30 minutes (single examination) or 20 minutes (comprehensive examination in VF Gas-Partikel-Systeme) (section 4 subsection 2 number 2 SPO).

Prerequisites
None

Competence Goal
Students develop an understanding for the basic physical processes that can be used for the (size dependent) separation of particles from a carrier gas flow, and become acquainted with related types of separation apparatus. They are able to identify the crucial operational and process conditions needed for a preselection of suitable separation devices for a specific separation task. They can describe quantitatively the influence of the main operational and process parameters on separation efficiency and energy consumption of an individual apparatus. The students learn to detect practical problems in the operation of separation devices, and they can identify procedures to overcome these issues.

They are therefore able to independently select the most suitable device and the corresponding operational mode for a specific separation task.

Content

- Fundamentals:
  - Basic quantitative description of separation processes
  - Elementary theory for classifiers and separators
  - Criteria for selection and evaluation of a separation apparatus
  - Legal framework
- Specific separators for gas particle systems:
  - Functionality, design, fields of application, limitations, practical examples
  - Approximate quantitative calculation of separation efficiency and energy consumption for exemplary classification or separation tasks
  - Types of devices that are described in the lecture:
    - Classifiers in gravity and centrifugal force fields
    - Centrifugal separators (gas cyclone)
    - Filtering separators
    - Wet separators (Scrubbers)
    - Electrical separators (Electrostatic precipitators)

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 45 h
- Homework: 75 h
- Exam Preparation: 60 h

5.66 Module: Green Ammonia [M-CIWVT-107650]

Coordinators: TT-Prof. Dr. Moritz Wolf
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2026)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Once	1 term	English	4	1

Mandatory			
T-CIWVT-114997	Green Ammonia	4 CP	Wolf

Assessment
Learning control is an oral exam lasting approx. 20 minutes.

Prerequisites
None.

Competence Goal
The students are able to

- Comprehend the challenges of the global energy transition and hydrogen storage;
- Understand production of electricity from renewable sources, the production methods of green hydrogen and assess its role in the context of the energy transition;
- Know various alternative routes and technologies;
- Understand the future role of green ammonia as chemical, fuel and hydrogen carrier;
- Demonstrate effective leadership and communication.

Content
Experience the world of green ammonia with special focus on its synthesis and applications. Aside from direct use in the chemical industry, sustainably produced ammonia represents a promising fuel and is a high potential candidate for chemical hydrogen storage. Explore various aspects along the whole process chain from the generation of electricity from renewable sources, electrolyser technologies to the Haber-Bosch synthesis of ammonia and its chemical use, combustion and reforming. Compare the process chain and suitability for chemical hydrogen storage with alternative technologies and gain insight on the needs of the chemical industry in the context of the global energy transition. System integration and sector coupling for green hydrogen and Power-to-X technologies as well as market-driven operation of electrolyzers will be discussed.

Module Grade Calculation
The module grade is the grade of the oral exam.

Additional Information

- Exam can be taken in German or English.
- The module is offered as part of EPICUR.
- Only either the Chemical Hydrogen Storage module or the Green Ammonia module can be selected.
- Participation in an excursion is possible.

Workload

- Lecture: 30 hrs
- Homework: 50 hrs
- Exam preparation: 40 hrs

Literature
Announced in lectures/on slides.
Fundamentals: R. Schlögl, *Chemical Energy Storage*, 2022, De Gruyter.

M 5.67 Module: Heat Exchangers [M-CIWVT-104371]

Coordinators: Prof. Dr.-Ing. Thomas Wetzel
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Thermal Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	3

Mandatory			
T-CIWVT-108937	Heat Exchangers	6 CP	Wetzel

Assessment
The examination is an oral examination lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
Students know essential calculation methods for the dimensioning and verification of heat exchangers and are able to apply them to engineering problems, and implement them in calculation tools.

Content
types of heat exchangers, mean logarithmic temperature, efficiency-NTU-methodology, cell methodology, design of heat exchangers, heat transfer in typical heat exchanger geometries, Implementation of theoretical principles in calculation tools for heat exchangers

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload
- Attendance time (Lecture): 45 h
- Homework: 90 h
- Exam Preparation: 45 h

M 5.68 Module: Heat Transfer II [M-CIWVT-103051]

Coordinators: Prof. Dr.-Ing. Thomas Wetzel
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Thermal Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	4

Mandatory			
T-CIWVT-106067	Heat Transfer II	6 CP	Wetzel

Assessment
Learning control is an oral examination lasting approx. 20 minutes.
Module grade is the grade of the oral examination.

Prerequisites
None

Competence Goal
Students can deduce the basic differential equations of thermofluiddynamics and know possible simplifications. They know different analytical and numerical solution methods for the transient temperature field equation in quiescent media and are able to use them actively. Students are able to apply these solution methods independently to other heat conduction problems such as the heat transfer in fins and needles.

Content
Advanced topics in heat transfer:

Thermo-fluid dynamic transport equations, transient heat conduction; thermal boundary conditions; analytical methods (combination and separation of variables, Laplace transform); numerical methods (finite difference and volume methods); heat transfer in fins and needles

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload
- Attendance time (Lecture): 45 h
- Homework: 75 h
- Exam Preparation: 60 h

Literature
- Von Böckh/Wetzel: „Wärmeübertragung“, Springer, 6. Auflage 2015
- VDI-Wärmeatlas, Springer-VDI, 10. Auflage, 2011

M 5.69 Module: High Temperature Process Engineering [M-CIWVT-103075]

Coordinators: Prof. Dr.-Ing. Dieter Stapf
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Fuel Technology
Specialized Course I / Energy Process Engineering
Specialized Course I / Thermal Process Engineering
Specialized Course I / Combustion Technology

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-106109	High Temperature Process Engineering	6 CP	Stapf

Assessment
Learning control is an oral examination lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
Students identify requirements for high-temperature processes from the problem definition. They determine the required process parameters by means of suitable balancing, taking into account relevant kinetic processes. They are able to select suitable reactors and process components for this purpose. This enables students to critically evaluate different processes in the process industry and systematically develop solutions for new problems in High Temperature Process Engineering.

Content
Examples of high-temperature processes; combustion fundamentals; heat transfer by radiation; heat exchange calculation for high-temperature systems; metallic and ceramic high-temperature materials; examples of the design of high-temperature systems.

Module Grade Calculation
The grade of the oral examination is the module grade.

Additional Information
The module will exceptionally be offered in WS 26/27 in 2026 and not in SS 26.

This module deals with high-temperature process engineering as a cross-sectional topic of various process engineering disciplines. As part of the exercises, the fundamentals learned are applied in process assessment using specific examples of High Temperature Process Engineering.

Workload

- Attendance time (Lecture): 45 h
- Homework: 75 h
- Exam Preparation: 60 h

5.70 Module: Hydrogen and Fuel Cell Technologies [M-CIWVT-104296]

Coordinators: Prof. Dr.-Ing. Dimosthenis Trimis
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Fuel Technology
Specialized Course I / Energy Process Engineering
Specialized Course I / Combustion Technology

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108836	Hydrogen and Fuel Cell Technologies	4 CP	Trimis

Assessment
Learning control is an oral exam lasting approx. 20 minutes.

Prerequisites
None

Competence Goal

- The students are able to identify similarities and differences between different fuel cell systems.
- The students are able to assess different fuel cell systems based on the thermodynamic fundamentals.
- Students can describe chemical and process fundamentals of fuel cell systems and, based on this, name conditions for their use.
- The students are able to name and assess hydrogen production processes.
- The students are able to identify and assess specific problem areas of hydrogen and fuel cell technology.

Content

- Introduction and thermo-dynamic basics
- PEM fuel cells
- Molten carbonate fuel cells (MCFC)
- Solid oxide fuel cells (SOFC)
- Fuel cells for liquid and solid fuels
- Hydrogen as an energy carrier
- Hydrogen production
- Electrolysis
- Steam reforming
- Partial oxidation
- Liquid fuel reforming process
- Conversion/purification of carbon monoxide
- Desulphurization
- Fuel cell systems: peripheral components and integration.

Module Grade Calculation
The module grade ist the grade of oral examination.

Workload

- Attendance time: 30 hrs
- Homework: 60 hrs
- Exam Preparation: 30 hrs

M 5.71 Module: Hydrogen in Materials – Exercises and Lab Course [M-MACH-107278]

Coordinators: Dr. rer. nat. Stefan Wagner
Organisation: KIT Department of Mechanical Engineering
Part of: Technical Supplement Course (Usage from 4/1/2025)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each term	1 term	German	4	1

Election Notes
The module can be passed either in English or in German.

Hydrogen in Materials – Exercises and Lab Course (Election: at least 4 credits)			
T-MACH-112159	Hydrogen in Materials – Exercises and Lab Course	4 CP	Wagner
T-MACH-112942	Hydrogen in Materials – Exercises and Lab Course	4 CP	Wagner

Assessment
The assessment consists of a certificate

Prerequisites
none

Competence Goal
In this exercise with lab course the contents of the lecture "Hydrogen in Materials: from Energy Storage to Hydrogen Embrittlement" are deepened. The students know the differences in thermodynamics and kinetics of the hydrogen interaction with storage materials and construction materials. The students can describe the hydrogen interaction with microstructural defects in materials, and they know the resulting effects on the materials' mechanical integrity. Based on this, the students can express the requirements of the respective materials classes and transfer them to engineering applications.

Utilizing proper experimental setups, the students can measure hydrogen induced stresses in materials, the hydrogens' diffusivity and its chemical potential, and they can quantify H-effects on the mechanical properties of steels. From the measurement data, the students can construct metal-hydrogen phase diagrams, they can qualitatively assess the defect density in the metal, and they can estimate the susceptibility of steels to hydrogen embrittlement.

Content
o Hydrogen as energy storage – the hydrogen cycle and safety issues

o methods for hydrogen charging of materials and hydrogen detection

o Hydrogen adsorption at and absorption in different solids, Sievert's law

o interstitial lattice sites and lattice expansion

o Hydrides, van't Hoff plots, phase transitions, M-H binary phase diagrams

o ternary alloy effects

o hydrogen mobility in materials: interstitial diffusion and quantum mechanical tunneling

o interaction of hydrogen with defects

o hydrogen embrittlement of steels, different embrittlement models

o hydrogen in nano-scale systems and new storage materials

Workload
The workload for the module "Hydrogen in Materials – Exercises and Lab Course" is 120 h per semester and consists of the presence during the lectures (26 h) as well as self-study for the lecture (94 h).

Teaching and Learning Methods
Tutorials (Obligatory)

Lab Course (Obligatory)

5.72 Module: Hydrogen in Materials: from Energy Storage to Hydrogen Embrittlement [M-MACH-107277]

Coordinators: Prof. Dr. Astrid Pundt
Organisation: KIT Department of Mechanical Engineering
Part of: Technical Supplement Course (Usage from 4/1/2025)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each term	1 term	German	4	1

Election Notes
The module can be passed either in English or in German.

Hydrogen in Materials: from Energy Storage to Hydrogen Embrittlement (Election: at least 4 credits)			
T-MACH-110923	Hydrogen in Materials: from Energy Storage to Hydrogen Embrittlement	4 CP	Pundt
T-MACH-110957	Hydrogen in Materials: from Energy Storage to Hydrogen Embrittlement	4 CP	Pundt

Assessment
oral exam, about 25 minutes

Prerequisites
none

Competence Goal
This module teaches physical and chemical basics of hydrogen adsorption and absorption of different materials. It trains the understanding of the specific lattice positions that hydrogen occupies within solids, and its impact on material properties. A thermodynamical approach yields Sievert's law, allowing the students to describe the different solubilities of hydrogen (and other gases) in solid materials. Further thermodynamic data can be obtained using van't Hoff plots of phase transformation pressures. The impact of ternary alloy components, as described by semi-empirical models, will be recognized. The specific mobility of hydrogen in materials will be understood, which divides into classical diffusion and quantum mechanical tunneling processes. The students can describe the interaction of hydrogen with defects in crystal lattices, which is of special interest for properties of nano-scale materials or for the hydrogen embrittlement of steels. Basic embrittlement models can be explained by the students. Actual hydrogen storage systems can be summarized.

Content
o Hydrogen as energy storage – the hydrogen cycle and safety issues
o methods for hydrogen charging of materials and hydrogen detection
o Hydrogen adsorption at and absorption in different solids, Sievert's law
o interstitial lattice sites and lattice expansion
o Hydrides, van't Hoff plots, phase transitions, M-H binary phase diagrams
o ternary alloy effects
o hydrogen mobility in materials: interstitial diffusion and quantum mechanical tunneling
o interaction of hydrogen with defects
o hydrogen embrittlement of steels, different embrittlement models
o hydrogen in nano-scale systems and new storage materials

Workload
The workload for the module "Hydrogen in Materials: from Energy Storage to Hydrogen Embrittlement" is 120 h per semester and consists of the presence during the lectures (26 h) as well as self-study for the lecture (94 h).

Teaching and Learning Methods
Lectures (Obligatory)

M 5.73 Module: Industrial Aspects in Bioprocess Technology [M-CIWVT-105412]

Coordinators: Prof. Dr. Jürgen Hubbuch
Organisation: KIT Department of Chemical and Process Engineering
Part of: Specialized Course I / Biopharmaceutical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	5	1

Mandatory			
T-CIWVT-110935	Industrial Aspects in Bioprocess Technology	4 CP	Hubbuch

Assessment
Learning control ist an oral exam lasting approx. 15 minutes.

Prerequisites
None

Competence Goal
Students can discuss and analyze challenges and aspects in the biopharmaceutical industry.

Content

- Industrial Aspects on process development.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Lectures: 30 h
- Homework: 60
- Exam preparation: 30

5.74 Module: Industrial Biocatalysis [M-CIWVT-106678]

Coordinators: PD Dr. Jens Rudat
Organisation: KIT Department of Chemical and Process Engineering
Part of: Specialized Course I / New Bio-Production Systems - Electro-Biotechnology (Usage from 4/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-113432	Industrial Biocatalysis	4 CP	Rudat

Assessment
The learning control is an oral examination llasting approx. 20 minutes.

Prerequisites
None

Competence Goal
Students are familiar with industrially significant applications of biocatalytic reactions, as well as their challenges and the fundamentals of the associated process control with isolated enzymes and whole cells. They are able to compare and critically evaluate processes leading to industrially relevant product (chemo- vs. biocatalysis and various biocatalytic options).

Content
Current developments of enzyme-catalyzed production as well as already established procedures:

- Pharma industries: synthesis and modification of drugs
- Chemical industries: synthesis and modification of basic and fine chemicals
- Food industries: production and enzymatic conversion of ingredients

In addition to the presentation of enzymatic reactions and their molecular-biological optimization, also aspects of process engineering are discussed such as choice and design of solvents/reaction media, downstream processing, as well as economic and ecologic factors.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 hrs
- Homework: 45 hrs
- Exam Preparation: 45 hrs

Recommendations
Basic knowledge of biochemistry and enzyme technology is required.

Fundamentals:
Jaeger, Liese, Syldatk: Introduction to Enzyme Technology; SpringerSpektrum 2024; ISBN: Softcover 978-3-031-42998-9 eBook 978-3-031-42999-6

M 5.75 Module: Industrial Bioprocesses [M-CIWVT-106501]

Coordinators: Prof. Dr.-Ing. Michael-Helmut Kopf
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2023)
Specialized Course I / Biopharmaceutical Process Engineering (Usage from 10/1/2023)
Specialized Course I / Mechanical Process Engineering (Usage from 10/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German	5	1

Mandatory			
T-CIWVT-113120	Industrial Bioprocesses	4 CP	Kopf

Assessment
The examination is an oral examination with a duration of about 25 minutes.

Prerequisites
None

Competence Goal
The Students:

- get familiar with processes and techniques to develop industrial scale, biotech-based processes
- gain insight into the workflow of large scale (double-digit kt/a) industrial bioprocess development
- learn to combine theoretical understanding with practical applications related to relevant industrial systems.

understand relevance of tecno-economic evaluation as a basis for developing competitive processes

Content

- **Process to develop new or alternative, bio-based production process:**
  Ideation, Basic Concept, Critical analysis, Development steps
- **Value Proposition of novel product / process:**
  Quality, Performance, Price, Eco-efficiency, Regional aspects
- **Critical aspects along the development process:**
  Feedstock issues, Design to Cost, Specification and Performance, Regulatory Issues, Eco-efficiency (raw material and energy efficiency)
- **From Lab to Production (focus of lecture):**
  Phases of a development process: Explorative Research, Proof of Principle, Proof of Concept, Scale-up and Apparatus design, Plant design, Production
- **Competitor Intelligence**:
  Competitors with their “own” processes, Alternative products, similar in application
- **Benchmarking as a development tool:**
  Cost Benchmarking, CoP, as a development tool to identify optimization potential
- **Production scenarios:**
  Own investment, Toller, Production Partner

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 h
- Homework: 60 h
- Exam Preparation: 30 h

Literature
Skriptum zur Vorlesung

M 5.76 Module: Industrial Wastewater Treatment [M-CIWVT-105903]

Coordinators: Prof. Dr. Harald Horn
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2022)
Specialized Course I / Water Technology (Usage from 4/1/2022)
Specialized Course I / Environmental Process Engineering (Usage from 4/1/2022)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	English	5	1

Mandatory			
T-CIWVT-111861	Industrial Wastewater Treatment	4 CP	Horn

Assessment
The learning control is an oral examination lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
The students will be able to differentiate the composition of different types of industrial wastewater. Moreover, the students will have knowledge of treatment technologies, which can be applied to industrial wastewater. The students will be able to judge the biodegradability of industrial wastewater and can use that to design the needed treatment trains. The students do know treatment steps, which can be used enhance reuse the treated wastewater.

Content
This module provides the huge range of industrial wastewater composition for different industries (food, pulp and paper, chemical and pharmaceutical industry). The biodegradability will be analyzed and discussed with respect to potential treatment systems. A main focus will be biological treatment systems, especially biofilm reactors. Finally, the potential of water reuse in industrial processes will be discussed and solution will be provided.

Module Grade Calculation
The module grade is the grade of the oral exam.

Workload
- Attendance time: 30 h
- self-study: 60 h
- exam preparation: 30 h

5.77 Module: Innovation Management for Products & Processes in the Chemical Industry [M-CIWVT-104397]

Coordinators: Dr. Claudius Neumann
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Bioresource Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German/English	4	1

Mandatory			
T-CIWVT-108980	Innovation Management for Products and Processes in the Chemical Industry	4 CP	Neumann

Assessment
Learning control is a written examination (multiple choice) lasting 60 minutes.

Prerequisites
None

Competence Goal
The students get to know the structures of the chemical industry.

They receive an insight into the interpretation of business figures and their connection with innovations.

They know how different factors influence innovation strategies.

They get to know the expiry of an innovation process.

The students have the opportunity to utilize the presented methods and tackle problems which are close to industrial application.

Besides the students receive an insight into the work of an innovation management (excursion).

Content
Background

The chemical industry had to adapt to the economic conditions of globalization during the last decades. It has been aligned to global markets thus changing the formerly scientific-technology oriented R&D. Today the work in industrial product & process development requires skills besides a thorough knowledge about chemistry and technology: a good general economic understanding combined with the competence to manage a complex system based on business figures. This competence allows scientifically and technology educated scientists and engineers to align chemical product and process development within the Innovation Strategy to the strategic business plan. It is implemented within the Innovation Process and monitored and managed by characteristic performance indicators. Thus, the economic benefit of innovation can be quantified using quantitative measures.

Scope of the lecture

The lecture intends to provide the fundamentals for understanding Innovation Management and to utilize them by tackling examples close to industrial application. The course addresses the following key questions:

What are the structures in the chemical industry?

What are business figures? How are they interpreted and applied in terms of innovation?

What are customers? How do they influence innovation?

How do marketing and product management determine innovation?

What is a business strategy? How is it connected to the innovation strategy?

What is the Innovation Process? How is it managed?

What is Innovation Portfolio Management? Why is it needed for successful innovation?

What are state of the art Innovation Management practices in the chemical industry?

Visit

The lecture includes a one day visit to the Evonik Site Hanau for experiencing current Innovation Management practices from discussions with managers in the chemical industry.

Module Grade Calculation
The module grade ist the gradeof the written exam.

Workload

- Attendance time (Lecture): 30 h (Block lectures 4 days)
- Homework: 60 h
- Exam Preparation: 30 h

M 5.78 Module: Innovative Concepts for Formulation and Processing of Printable Materials [M-CIWVT-105993]

Coordinators: Prof. Dr. Norbert Willenbacher
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2022)
Specialized Course I / Applied Rheology (Usage from 10/1/2022)
Specialized Course I / Entrepreneurship in Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	English	4	1

Mandatory			
T-CIWVT-112170	Innovative Concepts for Formulation and Processing of Printable Materials	4 CP	Willenbacher

Assessment
The learning control is an oral examination lasting approx. 20 minutes.

Prerequisites
None.

Competence Goal
Students will be able to explain and apply basic concepts of stability and flow behavior of disperse systems. They will learn about industrially important printing and coating processes and be able to design complex fluid systems for these processes. Emphasis will be on printable ceramic and electrically or thermally conductive materials. Students will understand the concept of capillary suspensions and its potential applications for product design and be able to apply it to practical examples.

Content

- Fundamentals of the stability of disperse systems - suspensions and emulsions
- Fundamentals of rheology of disperse systems
- Rheology in printing and coating technology
- Screen printing for electronics and solar cells
- Atomization and automotive coating
- Extrusion-based additive manufacturing (AM) - ceramics, silicone, bio-gels
- Paste formulation concepts based on capillary suspensions
- Conductive adhesives and pastes for printed electronics

Module Grade Calculation
The module grade is the grade of the oral exam.

Workload

- Attendance time: 30 h
- Self-study: 50 h
- Exam preparation: 40 h

Literature
Colloid Science, Terence Cosgrove, Wiley, 2010, Scientific publications on the individual chapters will be announced in the lecture.

M 5.79 Module: Internship [M-CIWVT-104527]

Coordinators: Dr.-Ing. Siegfried Bajohr
Dr.-Ing. Barbara Freudig

Organisation: KIT Department of Chemical and Process Engineering

Part of: Internship

14 CP	pass/fail	Each term	1 term	German	4	1

Mandatory			
T-CIWVT-109276	Internship	14 CP	Bajohr, Freudig

Workload
12 weeks (420 h - 480 h)

M 5.80 Module: Introduction to Numerical Simulation of Reacting Flows [M-CIWVT-106676]

Coordinators: Prof. Dr. Oliver Thomas Stein
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2024)
Specialized Course I / Fuel Technology (Usage from 10/1/2025)
Specialized Course I / Energy Process Engineering (Usage from 10/1/2024)
Specialized Course I / Mechanical Process Engineering (Usage from 10/1/2024)
Specialized Course I / Combustion Technology (Usage from 10/1/2024)
Specialized Course I / Modelling and Simulation

Credits	Grading	Recurrence	Duration	Language	Level	Version
8 CP	graded	Each winter term	1 term	English	5	1

Mandatory			
T-CIWVT-113435	Introduction to Numerical Simulation of Reacting Flows - Prerequisite	5 CP	Stein
T-CIWVT-113436	Introduction to Numerical Simulation of Reacting Flows	3 CP	Stein

Assessment
The learning control consists of two partial achievements:

1. Completed Coursework: As a prerequisite for the oral exam, reports on the tutorial have to be submitted. These document the processed task, the generated data and their analysis.
2. Oral examination lasting approx. 30 minutes.

Prerequisites
None

Competence Goal
Course participants know the fundamentals of both batch and flow reactors for the simulation of chemical kinetics and reacting flows. They are knowledgeable of numerical methods for temporal and spatial discretisation. In the related Python tutorials, they have obtained a first practical experience in setting up, running and post-processing chemical kinetics and reacting flow simulations, forming the basis for more advanced simulations.

Content

- Introduction to Python
- batch reactors for chemical kinetics simulations
- simple flow reactors
- Newton-Raphson method
- time and space discretisation

Module Grade Calculation
The module grade ist the grade of the oral exam.

Additional Information
The Python tutorials will be conducted on the students' laptops.

Workload

- Attendance time
  Lectures 2 SWS: 30 hrs
  Tutorials 2 SWS: 30 hrs
- Self-study
  Preparation and wrap-up lectures: 15 hrs
  Data analysis, preparation and submission of reports: 105 hrs
- Exam preparation:
  60 hrs

T-CIWVT-106032	Kinetics and Catalysis	6 CP	Wehinger

Assessment
Learning control is a written examination lasting 90 minutes.

Prerequisites
None

Competence Goal
Students are introduced to the kinetics of molecular transport and reaction. They learn about catalysis as a kinetic phenomenon. They are able to analyze and interpret the kinetics of homogeneously, enzymatically and heterogeneously catalyzed processes.

Content
Kinetic theory of gases; molecular transport in gases and liquids; diffusivity in porous solids; molecular interactions and Lennard-Jones potential; kinetics of homogeneous reactions; adsorption at solid surfaces and sorption kinetics; elements of the kinetics of catalyzed reactions (homogeneous acid-base, enzymatic and heterogeneous catalysis).

Module Grade Calculation
The module grade ist the grade of the written exam.

Workload

- Attendance time (Lecture): 42 h
- Revision course: 28 h
- Homework: 80 h
- Exam Preparation: 30 h

Literature

- W. Atkins: Physical Chemistry (Oxford University Press, 1998);
- B. Bird, W.E. Stewart, E.N. Lightfoot: Transport Phenomena (Wiley, 2007)
- C. Gates: Catalytic Chemistry (Wiley, 1992)
- Ertl: Reactions at Solid Surfaces (Wiley, 2009)

5.83 Module: Liquid Transportation Fuels [M-CIWVT-105200]

Coordinators: Prof. Dr. Reinhard Rauch
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Environmental Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	5	2

Mandatory			
T-CIWVT-111095	Liquid Transportation Fuels	6 CP	Rauch

Assessment
Learning Control is an oral examination with a duration of about 20 minutes (SPO section 4 subsection 2).

Prerequisites
None

Competence Goal
The students are enabled to balance modern processes for the production of liquid fuels and to put them into context of a modern refinery. Actual alternative processes for the production of liquid fuels, their advantages and disadvantages have to be understood.

Content
Introduction to Chemical Fuels (resources, global and regional consumption, CO_2 emissions, characterization of raw materials and products, overview of conversion processes; petroleum refining: characterization of crude oils and refinery products, physical separation processes, chemical conversion processes (cracking, hydrotreating, reforming, H_2 production etc); liquid fuels from renewable sources (biomass, renewable electricity); gaseous fuels; gasification of solid fuels; economic aspects and perspectives.

Module Grade Calculation
Grade of the Module ist the grade of oral examination.

Workload

- Lectures and Exercises: 45 h
- Homework: 75 h
- Exam praparation: 60 h

Literature

- Elvers, B. (Ed.): Handbook of Fuels, Energy Sources for Transportation, Wiley VCH 2008.
- Lucas, A. G. (Ed.): Modern Petroleum Technology, Vol. 2 Downstream, John Wiley 2000.
- Gary, J.; Handwerk, G., Kaiser, M. J.: Petroleum Refining, Technology and Economics, Fifth Edition, CRC Press 2007

M 5.84 Module: Mass Transfer II [M-CIWVT-104369]

Coordinators: Dr.-Ing. Benjamin Dietrich
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Thermal Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-108935	Mass Transfer II	6 CP	Dietrich

Assessment
The examination is an oral examination with a duration of about 25 minutes.

Prerequisites
None

Competence Goal
Students will be able to derive the mass transport equation and derive an analytical solution to describe diffusion in stagnant fluid layers, taking various simplifications into account. They will also be able to determine diffusion coefficients for different types of systems. Students will be able to independently formulate the basic scientific equations for selected advanced and practically relevant mass transfer cases and solve them analytically or numerically.

Content
Advanced topics of mass transfer: numerical and analytical methods for solving the mass transfer equation; estimation of diffusion coefficients; in-depth understanding of practically relevant mass transfer cases: Membrane diffusion, mixture evaporation, physical and chemical absorption, mass transfer in complex network structures (lecture contents are accompanied by practical events in the form of numerical simulation studies in OpenFoam and selected practical experiments in the laboratory with elaboration in a team).

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 45 h
- Homework: 75 h
- Exam Preparation: 60 h

5.85 Module: Master's Thesis [M-CIWVT-104526]

Coordinators: Prof. Dr. Reinhard Rauch
Organisation: KIT Department of Chemical and Process Engineering
Part of: Master's Thesis

Credits	Grading	Recurrence	Duration	Language	Level	Version
30 CP	graded	Each term	1 term	German/English	5	5

Mandatory			
T-CIWVT-109275	Master's Thesis	30 CP	Rauch

Prerequisites
Process Technology and at least three further modules of the advanced fundamentals has to be passed. The intership has to be passed. The examination board decides on exceptions.

(Compare SPO section 14 subsection 1)

Modeled Prerequisites
The following conditions have to be fulfilled:

1. You have to fulfill 3 of 7 conditions:
    1. The module M-CIWVT-103065 - Biopharmaceutical Purification Processes must have been passed.
    2. The module M-CIWVT-103072 - Computational Fluid Dynamics must have been passed.
    3. The module M-CIWVT-103058 - Thermodynamics III must have been passed.
    4. The module M-CIWVT-104383 - Kinetics and Catalysis must have been passed.
    5. The module M-CIWVT-104378 - Particle Technology must have been passed.
    6. The module M-CIWVT-105380 - Membrane Technologies in Water Treatment must have been passed.
    7. The module M-CIWVT-107039 - Thermal Process Engineering II must have been passed.
2. The module M-CIWVT-104374 - Process Technology must have been passed.
3. The module M-CIWVT-104527 - Internship must have been passed.

Workload
Homework: 900 h

M 5.86 Module: Materials and Processes for Electrochemical Storage [M-CIWVT-104353]

Coordinators: Prof. Dr. Jens Tübke
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Mechanical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each term	1 term	German	4	2

Mandatory			
T-CIWVT-108146	Materials and Processes for Electrochemical Storage	4 CP	Tübke

Assessment
The examination is an oral examination with a duration about 30 minutes.

Prerequisites
None

Competence Goal
The students will be able to

- explain how electrochemical storage devices and converters (expecially batteries and fuel cells) work and describe typical electrochemical processes using the relevant fundamentals,
- evaluate active and passive materials used in terms of their chemical, physical, and electrochemical properties,
- select suitable manufacturing or modification processes for defined requirements,
- compare process engineering methods for manufacturing battery cells and assess their influence on performance, safety, and sustainability.

Content
Electrochemical basics
Basic introduction to electrochemistry, electrochemical potentials, concentration dependence, electrochemical methods.

Basics of electrochemical storage systems and fuel cells
Structure and operation of primary and secondary batteries:
Alkali-manganese, lead-acid, zinc-air, nickel-cadmium, nickel-metal hydride, redox-flow batteries, high-temperature batteries, lithium (sodium)-ion batteries, lithium-sulfur batteries, solid-state batteries.
Design and operation of fuel cells: PEMFC, AMFC, DMFC, SOFC, MCFC.

Materials and processes for electrochemical storage systems
Intercalation and conversion electrodes, liquid, polymeric and ceramic separators (electrolytes), Electrolyte additives and electrode coatings, current collector materials (metals, modified plastics), housing materials.

Production methods and processes for manufacturing battery cells
Design principles and production processes for lithium-based battery systems and solid-state batteries, Electrode production (paste production, coating process, drying process), dry coating process, Production processes for separation foils, Quality assurance processes in cell production, cell forming and testing processes for cells.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 h
- Homework: 80 h
- Exam Preparation: 10 h

M 5.87 Module: Measurement Techniques in Chemical Processing [M-CIWVT-104490]

Coordinators: Dr.-Ing. Steffen Peter Müller
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Chemical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	5	1

Mandatory			
T-CIWVT-109086	Measurement Techniques in Chemical Processing	4 CP	Müller

Assessment
Learning conrol is an oral exam lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
Students are capable to discuss various mesurement methods and are able to compare and analyse different masurement principles.

Due to the mentioned aims, students are able to criticise and rate various measurement methods.

Content
Theory and practice of online measurement methods e.g.: pressure, temperature, pH value and material properties for example: density.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 hrs
- Homework: 30 hrs
- Exam Preparation: 60 hrs

5.88 Module: Measurement Techniques in Chemical Processing (including practical course) [M-CIWVT-104450]

Coordinators: Dr.-Ing. Steffen Peter Müller
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Chemical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	5	1

Mandatory			
T-CIWVT-109086	Measurement Techniques in Chemical Processing	4 CP	Müller
T-CIWVT-109181	Practical Course Measurement Techniques in Chemical Processing	2 CP	Müller

Assessment
The examination consists of:

1. Oral examination with a duration of about 20 minutes.
2. Ungraded Laboratory work.

The grade of the oral examination is the module grade.

Prerequisites
None.

Competence Goal
Students are capable to discuss various mesurement methods and are able to compare and analyse different masurement principles.

Due to the mentioned aims, students are able to criticise and rate various measurement methods.

Content
Theory and practice of online measurement methods e.g.: pressure, temperature, pH value and material properties for example: density.

Workload

- Attendance time (Lecture): 30 hrs
- Internship: 15 hrs, 8 experiments
- Homework: 75 hrs
- Exam Preparation: 60 hrs

5.89 Module: Measurement Techniques in the Thermo-Fluid Dynamics [M-CIWVT-104297]

Coordinators: Prof. Dr.-Ing. Dimosthenis Trimis
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Energy Process Engineering
Specialized Course I / Thermal Process Engineering
Specialized Course I / Technical Thermodynamics (Usage from 10/1/2023)
Specialized Course I / Combustion Technology

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-108837	Measurement Techniques in the Thermo-Fluid Dynamics	6 CP	Trimis

Assessment
Learning Control is an oral examination with a duration of about 20 minutes (section 4 subsection 2 SPO).

Prerequisites
None

Competence Goal

- The students are able to plan an experiment, select the appropriate quantities to be measured and identify the appropriate dimensionless numbers for the universal representation of the results.
- The students have a thorough understanding of several advanced measuring techniques used for basic research in thermofluids. They are able to select the most appropriate technique for an experimental study.
- The students can assess the accuracy and limitations of measuring techniques quantitatively.
- The students understand the different time scales of involved phenomena and the stochastic nature of experiments, measuring techniques and turbulent flows. They are able to accurately process acquired measurement data in the time and in the spectral domain.

Content

- Design of experiment and dimensional analysis
- Flow visualization (light sheet techniques, shadowgraphy, Schlieren and interferometry)
- Laser Doppler Anemometry
- Phase Doppler Anemometry
- Particle Image Velocimetry
- Laser Induced Fluorescence
- Absorption spectroscopy
- Overview of further techniques
- Data processing for turbulent flows in the time and spectral domain

Module Grade Calculation
Grade of the module is the grade of the oral examination.

Workload

- Lectures and Exercises: 45 h
- Homework: 25 h
- Exam Preparation: 110 h

Literature

- C. Tropea, Handbook of Experimental Fluid Mechanics, Springer, Heidelberg, 2007
- M. Zlokarnik, Dimensional Analysis and Scale-up in Chemical Engineering, Springer, Berlin, 1991
- A. C. Eckbreth, Laser Diagnostics for Combustion Temperature and Species, Taylor & Francis Ltd, New York, 1996

- H. W. Coleman, W. G. Steele, Experimentation and Uncertainty Analysis for Engineers, Wiley, New York, 1999

5.90 Module: Membrane Materials & Processes Research Masterclass [M-CIWVT-106529]

Coordinators: Prof. Dr. Andrea Schäfer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	4	1

Mandatory			
T-CIWVT-113153	Membrane Materials & Processes Research Masterclass	6 CP	Schäfer

Assessment
Learning control is an examination of another type:
Research report of 10 pages and an oral presentation of 10 minutes (individual work).

Prerequisites
None

Competence Goal
The student will learn basic skills in research at the example of membrane materials and processes applied to water treatment. The skills will assist in conducting research at master, PhD, or postdoctoral levels when background or training differ. Technical skills include the design of experiments to answer specific research questions, performance parameters through to data manipulation, validation, error estimation and interpretation, while the soft skills encompass health and safety aspects of experimental research, research communication (publication) and research integrity.

Content
The content teaches required knowledge to carry out research in the field, including formulation of a research problem and research questions, experimental design, data validation and storage, as well as presentation of research in spread sheets, graphs, schematics and communication in publications, oral & poster presentations.

Module Grade Calculation
The module grade ist the grade of the examination of another type.

Additional Information
The course will be held at IAMT at Campus North (352, IAMT Seminar Room) and be integrated with ongoing research in an international environment. To carry out experimental work exam registration is required. Attendance is required for the completion of the module, in particular for the full day workshop. Learning will be most successful with an interactive participation of participants. Tutors are available during the course time (only) to assist and answer questions.

Workload

- Lectures and Exerciese s: 60 hrs
- Self-study: 80 hrs
- Exam preparation: 40 hrs

Recommendations
The course assumes basic knowledge of membrane materials and processes applied to water treatment as well as the course on proposal writing. Those missing the relevant background are expected to read a textbook from the course recommended reading list or consult relevant materials on the proposal writing course.

M 5.91 Module: Membrane Technologies in Water Treatment [M-CIWVT-105380]

Coordinators: Prof. Dr. Harald Horn
Dr.-Ing. Florencia Saravia

Organisation: KIT Department of Chemical and Process Engineering

Part of: Advanced Fundamentals (BIW) (Usage from 4/1/2021)
Technical Supplement Course (Usage from 4/1/2020)
Specialized Course I / Food Process Engineering (Usage from 4/1/2020)
Specialized Course I / Water Technology (Usage from 4/1/2020)
Specialized Course I / Bioresource Engineering (Usage from 4/1/2020)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	English	5	3

Mandatory			
T-CIWVT-113235	Exercises: Membrane Technologies	1 CP	Horn, Saravia
T-CIWVT-113236	Membrane Technologies in Water Treatment	5 CP	Horn, Saravia

Assessment
The learning control consists of two partial achievements:

- written examination lasting 90 minutes
- completed coursework (prerequisite for the written exam):
  Submission of exercises, membrane design and short presentation (5 minutes, group work).

Prerequisites
None

Competence Goal
Students have a fundamental knowledge on membrane technology in water and waste water treatment. They learn how the different membrane systems (reverse osmosis, nanofiltration, ultrafiltration, microfiltration, and dialysis) have to be applied to produce a certain water quality. They are able to design such systems.

Content

- The solution-diffusion model
- Concentration polarization and the consequences for membrane module design.
- Membrane production and properties.
- Membrane configuration and design
- Membrane systems for desalination and brackish water treatment
- Membrane bio reactors for waste water treatment
- Biofouling, scaling and prevention of both
- Excursions with introduction

Module Grade Calculation
The module grade is the grade of the written examination.

Workload

- Attendance time: Lectures: 30 hrs; Exercises/ excursions: 15 hrs
- Preparation/follow-up: 60 hrs
- Examination + exam preparation: 75 hrs

Recommendations
Module „Water Technology (PA221)“

Literature
Will be announced in the lecture.

M 5.92 Module: Microfluidics [M-CIWVT-104350]

Coordinators: PD Dr. Gero Leneweit
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Applied Rheology
Specialized Course I / Mechanical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German	4	3

Mandatory			
T-CIWVT-108909	Microfluidics	4 CP	Leneweit

Assessment
The examination is an oral examination with a duration of about 30 minutes.

Prerequisites
None

Competence Goal
Acquisition of capacities for the development of microfluidic systems and their investigation

Content

- physics an measurement technology of miniaturization, scales in micro and nanofluicics
- introduction to fabrication methods fo chemical-biological process technologies
- Micro- and nanofluidic flow processes
- Electrohydrodynamics of microsystems: electroosmosis and electrophoresis
- Microfluidic sequencing techniques for genomics and proteomics
- Manipulation processes for the metabolomics of single cells
- Diffusion, mixing, and separation in microsystems
- Digital microfluidics and operators of microfluidic process control
- Generation and analysis of technological multiphase systems
- Industrial applications of microfluidics
- Microfluidic production of drug delivery systems for biologics
- Microfluidic process technologies and scale-up for biotechnology

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 h
- Homework: 60 h
- Exam Preparation: 30 h

Literature
Skriptum zur Vorlesung

5.93 Module: Microfluidics and Case Studies [M-CIWVT-105205]

Coordinators: PD Dr. Gero Leneweit
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Applied Rheology
Specialized Course I / Mechanical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	5	1

Mandatory			
T-CIWVT-108909	Microfluidics	4 CP	Leneweit
T-CIWVT-110549	Microfluidics - Case Studies	2 CP	Leneweit

Assessment
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

Prerequisites
None

Competence Goal
Acquisition of capacities for the development of microfluidic systems and their investigation

Content
Definition of the term „microfluidics“, physics of miniaturization, scales in micro and nanofluicics, introduction to fabrication methods, fluid dynamics of microfluidic systems, basic equations of fluid mechanics, creeping flows, electrohydrodynamics of microsystems, electroosmosis, electrophoresis and DNA sequencing, diffusion, mixing and separation in microsystems, interfacial phenomena and multiphase flows in microsystems, digital microfluidics and microfluidic systems

Lab experiments:Preparation of nanoemulsions from aerosols in a micromixer; preparation and characterization of nanocapsules as drug delivery systems by nanofluidics.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 h
- Homework: 60 h
- Exam Preparation: 35 h
- Case Studies: 60 h

Literature
Skriptum zur Vorlesung

M 5.94 Module: Microrheology and High Frequency Rheology [M-CIWVT-104395]

Coordinators: Dr.-Ing. Claude Oelschlaeger
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course

Credits	Grading	Recurrence	Duration	Language	Level	Version
2 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108977	Microrheology and High Frequency Rheology	2 CP	Oelschlaeger

Prerequisites
None

Workload

- Attendance time (Lecture): 15 h
- Homework: 35 h
- Exam Preparation: 10 h

M 5.95 Module: Mixing, Stirring, Agglomeration [M-CIWVT-105399]

Coordinators: Dr.-Ing. Frank Rhein
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2020)
Specialized Course I / Food Process Engineering (Usage from 4/1/2020)
Specialized Course I / Applied Rheology (Usage from 4/1/2020)
Specialized Course I / Mechanical Process Engineering (Usage from 4/1/2020)
Specialized Course I / Bioresource Engineering (Usage from 4/1/2020)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	5	1

Mandatory			
T-CIWVT-110895	Mixing, Stirring, Agglomeration	6 CP	Rhein

Assessment
Learning control is an oral individual examination lasting approx. 30 minutes.

Prerequisites
None

Competence Goal
The students are able to explain the fundamental laws and the derived physical principles of mixing, stirring and the particle agglomeration and not only to relate them to the principally suited processes but also to selected apparatuses. They have the ability to apply the relationship between product, operation and design parameters to different processes. They can analyse the related process engineering problems with scientific methods and give alternative problem solution proposals. On the basis of their skills they can evaluate whether and if applicable a promising process can be designed.

Content

- Fundamentals and applications
- statistic methods to characterize the mixing quality
- characterisation of the flow properties of bulk solids and liquids
- introduction into dimension analysis to achieve characteristic numbers important for mixing problems
- scale-up procedures for specific mixing processes
- solids mixing processes like free-fall, pusher and intensive mixers, fluidised bed, air jet, and turnover mixers; pile mixing techniques
- fluid-mixing processes like homogenisation, suspending, emulsifying, gassing and heat transfer
- static mixers and kneaders
- adhesion forces between particles
- agglomerate properties: characterisation of agglomerates regarding size, size distribution, porosity, density, stability, flow behaviour and instantiation behavior
- agglomeration processes like roll-agglomeration, mixing agglomeration, fluidized bed and spray agglomeration, agglomeration in liquids by means of coagulation, flocculation or changed wettability, press agglomeration by means of tabletting, roller compaction or extrusion and post hardening of agglomerates by means of sintering
- Introduction to modeling and simulation of mixing and agglomeration processes

Module Grade Calculation
The module grade ist the grade of oral examination.

Workload
Lectures: 3 SWS/ 45 hrs
Homework: 75 hrs
Exam preparation: 60 hrs

M 5.96 Module: Modeling Wastewater Treatment Processes [M-BGU-106113]

Coordinators: Dr.-Ing. Mohammad Ebrahim Azari Najaf Abad
Organisation: KIT Department of Civil Engineering, Geo and Environmental Sciences
Part of: Technical Supplement Course (Usage from 10/1/2022)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	English	4	1

Mandatory			
T-BGU-112371	Modeling Wastewater Treatment Processes	6 CP	Azari Najaf Abad

Assessment
- module component T-BGU-112371 with examination of another type according to § 4 Par. 2 No. 3

details about the learning control, see module component

Prerequisites
none

Competence Goal
The students will be able to learn the basics of wastewater treatment modeling to develop a matrix for a biological model. Another objective is being able to work with several relevant computer software as tools for modeling wastewater treatment processes and running sensitivity analysis, calibration, and validation. At the end of this course, the students will be able to apply the theory concerning modeling practice in case studies with real datasets using one of the relevant software they learned. During the presentation, they will discuss and explain the outcome of the model.

Content
The course deals with the basis of wastewater modeling (kinetics, stoichiometry, mass balances, hydraulics, mixing, and matrix notation), an introduction of existing activated sludge models (ASM1, ASM2, ASM3, ASM2d), and a selection of computer programs (AQUASIM, SIMBA, GPS-X, and SUMO) in which the models can be built in and the protocol for the development of calibrated activated sludge models will be practiced. Different adjustments to basic ASM models for characterization of biofilm and granular sludge model, as well as anaerobic digestion models (ADM), will be also discussed. Besides the presentations, exercises form a part of the course. Finally, case studies with real datasets on modeling wastewater treatment plants will be practiced.

Module Grade Calculation
grade of the module is grade of the exam

Additional Information
The number of participants in the course is limited to 20 persons. The registration is made via ILIAS. The places are allocated considering the progress in the students' studies, with priority to students from *Water Science and Engineering*, then *Civil Engineering*, *Chemical and Process Engineering, Geoecology* and further study programs.

Workload
contact hours (1 HpW = 1 h x 15 weeks):

- lecture/exercise: 60 h

independent study:

- preparation and follow-up lecture/exercises: 60 h
- preparation of report and presentation (examination): 60 h

total: 180 h

Recommendations
Vorkenntnisse in Siedlungswasserwirtschaft, Modul 'Urban Water Infrastructure and Management'

M 5.97 Module: Modelling and Simulation of Electrochemical Systems [M-ETIT-100508]

Coordinators: Dr.-Ing. Andre Weber
Organisation: KIT Department of Electrical Engineering and Information Technology
Part of: Specialized Course I / New Bio-Production Systems - Electro-Biotechnology (Usage from 4/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
3 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-ETIT-100781	Modelling and Simulation of Electrochemical Systems	3 CP	Weber

Assessment
Success control takes place in the form of an oral examination lasting approx. 20 minutes.

Prerequisites
none

Competence Goal
The students know models on different scales (elementary kinetics to system model) for the description of electro-chemical systems and are able to use them in the development of batteries and fuel cells.

Content
The modeling of electrochemical systems is a multiscale problem. While the charge transfer at the electrode/electrolyte interface takes place on an atomic scale, system modeling requires highly simplified submodels for the system components that allow real-time simulation of system operation. In the lecture, current electrochemical models for batteries and fuel cells are presented at the various levels, the experimental determination of the model parameters is discussed and examples of model validation are shown.

Module Grade Calculation
The module grade is the grade of the oral examination.

Workload
1. lecture attendance time: 15 * 2 h = 30 h
2. Preparation and follow-up time for lecture: 15 * 2 h = 30 h
3. Exam preparation and attendance in the same: 30 h

Total: 90 h = 3 CP

Recommendations
The contents of the lecture "M-ETIT-107005 - Batteries, Fuel Cells, and Electrolysis" are assumed to be known. Students who have not (yet) heard this lecture are recommended to work through the lecture notes for this lecture in advance.

5.98 Module: Modern Concepts in Catalysis: From Science to Engineering [M-CIWVT-107149]

Coordinators: Prof. Dr. Jan-Dierk Grunwaldt
Prof. Dr. Felix Studt
Prof. Dr.-Ing. Gregor Wehinger

Organisation: KIT Department of Chemical and Process Engineering

Part of: Technical Supplement Course (Usage from 4/1/2025)

5 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CHEMBIO-103675	Molecular Biology and Genetics	5 CP	Kämper, Requena Sanchez

Assessment
Written exam of 120 minutes on the contents of the lecture parts Molecular Biology (3 LP) and Genetics (2 LP) (Total 5LP)

Prerequisites
none

Competence Goal
Students deepen their knowledge of the molecular basis of life and the technical possibilities of manipulating living organisms by altering their genes or their expression. This includes
a deeper theoretical understanding of the following areas:
Microbiology,Genetics, Molecular Biology

Content
VL Genetics:

DNA, DNA structure, DNA topology, chromosomes, chromatin, DNA replication, mutations, repair, transposable elements, assembly of genes, transcription, RNA processing, regulation of gene expression in pro- and eukaryotes (transcriptional, posttranscriptional, posttranslational), protein synthesis, epigenetics: Methylation, histone modifications, Hu-man genetics, tumor genetics, genome projects, functional genomics/proteomics/bioinformatics, immunogenetics (introduction), developmental genetics (introduction), behavioral genetics (introduction).

VL Molecular Biology:

Molecular Biology Introduction, DNA extraction, restriction enzymes, cloning in vectors, library screening, bioinformatics, sequencing, genome sequencing, RNA, Northern blot, RT-PCR, Real time PCR, cDNA library, microarrays, recombinant proteins, western blot, affinity chromatography, mutagenesis, transformation.

Module Grade Calculation
The module grade is the grade of the written exam

Workload
Attendance time: 75 h
Follow-up and exam preparation: 75 h
Total: 150 h
5 LP

Teaching and Learning Methods
Lectures

5.100 Module: Nanoparticles – Structure and Function [M-CIWVT-104339]

Coordinators: Dr.-Ing. Jörg Meyer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Gas Particle Systems
Specialized Course I / Mechanical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108894	Nanoparticles – Structure and Function	6 CP	Meyer

Assessment
The examination is an oral examination with a duration of about 30 minutes in case of a single module examination and 20 minutes in case of a overall examiation of the specialized course (section 4 subsection 2 number 2 SPO).

Prerequisites
None

Competence Goal
Students develop an understanding of the correlation between structure of nanoscaled systems and their physical properties. Additionally, they understand how process parameters in the synthesis of nanoscaled particle systems determine the resulting particle structure.

Based on the knowledge of the structure-function-relationships and of the synthesis routes, the students can develop strategies for the systematic generation and optimization of nanoparticulate systems for specific applications.

Content

- Technical and historical classification of the lecture content
- Methods for visualization of nanoscaled objects and structures
- Description and physical basis of specific properties of nanoscaled particles (and other structures / shapes)
  - Size dependency of surface energy
  - Modification of the phase transition temperature (compared to the bulk phase)
  - Mechanical properties
  - Optical properties
  - electrical properties

- Methods for synthesizing nanoscaled particle systems in the gas phase with well-defined properties
- Relevant process parameters for the adjustment of
  - Particle size (primary particle and agglomerate size)
  - Agglomeration state
  - Agglomerate strength
  - Structure / phase of the particle material
  - Chemical structure of particle surface
  - Multi-level structuring (core-shell, nanoparticles on support structures)

Module Grade Calculation
The module grade ist the grade of oral examination.

Workload

- Attendance time (Lecture): 45 h
- Homework: 75 h
- Exam Preparation: 60 h

M 5.101 Module: NMR for Engineers [M-CIWVT-104401]

Coordinators: apl. Prof. Dr. Gisela Guthausen
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Water Technology
Specialized Course I / Mechanical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-108984	NMR for Engineers	4 CP	Guthausen
T-CIWVT-109144	Laboratory Work for NMR for Engineers	2 CP	Guthausen

Prerequisites
None

Competence Goal
Students will be able to

- explain the physical principles of nuclear magnetic resonance (NMR) and describe the underlying phenomena.
- identify various areas of application for NMR and assess its usefulness in the fields of bioengineering/chemical engineering & process engineering.
- understand and critically evaluate the functioning and usefulness of the NMR method using concrete examples.

Content
An overview of applications of nuclear magnetic resonance (NMR) will be given together with the basic description of this analytical tool. In the focus of the lectures are typical applications of NMR in chemical and bio engineering. The understanding of this versatile analytical method will be developed on the basis of dedicated examples.

Workload

- Attendance time (Lecture): 30 h
- Revision course: 30 h
- Internship: Atendance Time 30 h, Preparation Time 30 h
- Exam Preparation: 60 h

Literature
Lehrbücher Kimmich und Callaghan, weitere Literatur wird jeweils in der Vorlesung angegeben.

M 5.102 Module: NMR Methods for Product and Process Analysis [M-CIWVT-105890]

Coordinators: apl. Prof. Dr. Gisela Guthausen
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2022)
Specialized Course I / Water Technology (Usage from 4/1/2022)
Specialized Course I / Biopharmaceutical Process Engineering (Usage from 4/1/2022)
Specialized Course I / Mechanical Process Engineering (Usage from 4/1/2022)

- Attendance time (Lecture): 30 h
- Revision course: 30 h
- Exam Preparation: 60 h

Literature
Textbooks: Kimmich and Callaghan; further reading will be announced during the lectures.

5.103 Module: Nonlinear Process Control [M-CIWVT-106316]

Coordinators: Prof. Dr.-Ing. Thomas Meurer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2023)
Specialized Course I / Automation and Process Systems Engineering (Usage from 10/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German/English	5	1

Mandatory			
T-CIWVT-112824	Nonlinear Process Control	6 CP	Meurer

Assessment
Learning control is an oral examination with a duration of about 45 minutes.

Prerequisites
None

Competence Goal
Students will gain an in-depth understanding of methods and concepts for analyzing and controlling nonlinear dynamic systems. They will understand the underlying mathematical concepts and be able to apply them to new problems. They will gain a comprehensive understanding of nonlinear control concepts and be able to apply these methods independently to specific problems, both analytically and with the aid of computer algebra systems.

Content
Nonlinearities are ubiquitous in nature. Differing from linear control theory and linear control systems, which typically rely on the local linearization of a nonlinear system around some equilibrium, this module addresses nonlinear concepts for the analysis and the control of nonlinear systems. The course covers the following topics:

- Introduction to the dynamic analysis of nonlinear systems
- Differential geometric concepts
- Exact feedback linearization
- Differential flatness and flatness-based feedforward and tracking control
- Lyapunov theory and Lyapunov-based design methods

Problem sets are considered in the exercises to apply the developed methods using analytical tools as well as computer algebra systems to realize the design approaches.

Module Grade Calculation
The grade of the module is the grade of the oral exam.

Additional Information
If required, the course will be offered in English.

Workload
Attendance time: Lectures: 30 hrs. Exercises: 15 hrs.

Self-study: 75 hrs.

Exam preparation: 60 hrs.

Literature

M 5.104 Module: Numerical Methods in Fluid Mechanics [M-MATH-102932]

Coordinators: Prof. Dr. Willy Dörfler
PD Dr. Gudrun Thäter
Organisation: KIT Department of Mathematics
Part of: Technical Supplement Course
Specialized Course I / Mechanical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	English	4	1

Mandatory			
T-MATH-105902	Numerical Methods in Fluid Mechanics	4 CP	Dörfler, Thäter

Assessment
Oral exam of about 20 minutes.

Prerequisites
None

Competence Goal
Participants know about the modelling and physical basics that lead to the model equations. They know how to discretize fluidmechanical problems with the finite element method and know especiallly how to treat the incompressibility condition. They are able to analyze stability and convergence of the presented methods.

Content

- Modelling and derivation of the Navier-Stokes equations
- Mathematical and physical representation of energy and stress
- Lax-Milgram theorem, Céa lemma and saddle point theory
- Analytical and numerical treatment of the potential and Stokes flow
- Stability and convergence of the discrete models
- Numerical treatment of the stationary nonlinear equation
- Numerical treatment of the instationary problems
- Applications

Module Grade Calculation
The grade of the module is the grade of the oral exam.

Workload
Total workload: 120 hours

Attendance: 45 h

- lectures, problem classes and examination.

Self studies: 75 h

- follow-up and deepening of the course content,
- work on problem sheets,
- literature study and internet research on the course content,
- preparation for the module examination.

Recommendations
Basic knowledge in the numerical treatment of differential equations, such as boundary value problems or initial value problems is strongly recommended. Knowledge in functional analysis is recommended.

M 5.105 Module: Numerical Simulation of Reacting Multiphase Flows [M-CIWVT-107076]

Coordinators: Prof. Dr. Oliver Thomas Stein
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2025)
Specialized Course I / Fuel Technology (Usage from 4/1/2025)
Specialized Course I / Energy Process Engineering (Usage from 4/1/2025)
Specialized Course I / Mechanical Process Engineering (Usage from 4/1/2025)
Specialized Course I / Combustion Technology (Usage from 4/1/2025)
Specialized Course I / Modelling and Simulation

Credits	Grading	Recurrence	Duration	Language	Level	Version
8 CP	graded	Each summer term	1 term	German/English	5	1

Mandatory			
T-CIWVT-114117	Numerical Simulation of Reacting Multiphase Flows - Prerequisite	5 CP	Stein
T-CIWVT-114118	Numerical Simulation of Reacting Multiphase Flows	3 CP	Stein

Assessment
The learning control consists of two partial achievements:

1. Completed Coursework: As a prerequisite for the oral exam, reports on the tutorial have to be submitted. These document the processed task, the generated data and their analysis.
2. Oral examination lasting approx. 30 minutes.

Prerequisites
The completed coursework is a prerequisite for participation in the oral examination.

Competence Goal
Course participants can explain basic and advanced concepts related to the modelling and simulation of reacting multiphase flows. They are knowledgeable of the governing equations of both single and multiphase flows and can describe the physical meaning of all terms in these equations. They can explain the fundamentals of turbulence and turbulence modelling, chemical conversion and multiphase flow modelling. They are knowledgeable of numerical approximation and solution methods for reacting multiphase flows and know how to apply them. In the related tutorials with the OpenFOAM software, they have obtained a first practical experience in setting up, running and analysing their simulations and are capable of applying the obtained knowledge to further simulation tasks.

Content

- Basics of computational fluid dynamics
- Governing equations, turbulence & turbulence modelling
- Chemical conversion and reacting flows
- Non-reacting and reacting multiphase flows
- Numerical approximation and solution methods

Module Grade Calculation
The module grade ist the grade of the oral exam.

Additional Information
The OpenFOAM tutorials will be conducted on the students' laptops. All course material is provided in English, while the lecture will be held in German or English, as required.

Workload

- Attendance time
  Lectures 2 SWS: 30 h
  Tutorials 2 SWS: 30 h
- Self-study
  Preparation and wrap-up lectures: 15 h
  Data analysis, preparation and submission of reports: 105 h
- Exam preparation:
  60 h

Literature
Will be announced.

M 5.106 Module: Optimal and Model Predictive Control [M-CIWVT-106317]

Coordinators: Prof. Dr.-Ing. Thomas Meurer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2023)
Specialized Course I / Automation and Process Systems Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	English	5	1

Mandatory			
T-CIWVT-112825	Optimal and Model Predictive Control	6 CP	Meurer

Assessment
Learning control is an oral examination with a duration of about 45 minutes.

Prerequisites
none

Competence Goal
Students will gain an in-depth understanding of dynamic optimization with constraints, optimal control, and model predictive control. They will understand the underlying mathematical concepts and be able to apply them to new problems. They will gain a comprehensive understanding of optimization methods and be able to apply these methods independently to dynamic optimization problems. Students are familiar with various numerical solution approaches, understand how they work, and can implement them for optimization problems.

Content
Many problems in industry and economy rely on the determination of an optimal solution satisfying desired performance criteria and constraints. In mathematical terms this leads to the formulation of an optimization problem. Here it is in general distinguished between static and dynamic optimization with the latter involving a dynamical process. This lecture gives an introduction to the mathematical analysis and numerical solution of dynamic optimization problems with a particular focus on optimal control and model predictive control. The lecture addresses the following topics:

- Fundamentals of dynamic optimization problems
- Dynamic optimization without and with constraints
- Linear and nonlinear model predictive control
- Numerical methods

Selected examples are considered and solved in the exercises and dedicated computer exercises.

Module Grade Calculation
The grade of the module is the grade of the oral exam.

Workload
Attendance time: Lectures: 30 hrs. Exercises: 15 hrs.

Self-study: 60 hrs.

Exam preparation: 75 hrs.

Literature

M 5.107 Module: Organ Support Systems [M-MACH-102702]

Coordinators: apl. Prof. Dr. Christian Pylatiuk
Organisation: KIT Department of Mechanical Engineering

Part of: Technical Supplement Course
Specialized Course I / Biopharmaceutical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	2

Mandatory			
T-MACH-105228	Organ Support Systems	4 CP	Pylatiuk

Assessment
A performance assessment is held in form of a written examination of 60 minutes.

Prerequisites
none

Competence Goal
Students have comprehensive knowledge of the functioning of support systems and their components (e.g. sensors, actuators) for different human organs (e.g. heart, kidney, liver, eye, ear, locomotor system). They know the physical basics, the technical solutions and the essential aspects of these medical technology systems and their current limitations. Furthermore, they know bioreactors and other methods of using the body's own cells to support organs (tissue engineering). Furthermore, they have comprehensive knowledge of organ transplantation and its limitations.

Content
Hemodialysis, liver dialysis, heart-lung machine, artificial hearts, biomaterials, definition and classification of organ support and organ replacement, hearing prostheses, visual prostheses, exoskeletons, neuroprostheses, endoprostheses, tissue engineering.

Module Grade Calculation
The module grade is the grade of the written exam.

Workload

1. Attendance time Lecture: 15 * 2h = 30h
2. Pre- and postprocessing time Lecture: 15 * 3h= 45h
3. Exam preparation and attendance exam: 45h

Total: 120h = 4 LP

Recommendations
The content of module MMACH-105235 complements this lecture.

M 5.108 Module: Parallel Computing [M-MATH-101338]

Coordinators: PD Dr. Mathias Krause
Prof. Dr. Christian Wieners

Organisation: KIT Department of Mathematics

Part of: Technical Supplement Course (Usage from 10/1/2024)
Specialized Course I / Mechanical Process Engineering (Usage from 10/1/2024)
Specialized Course I / Modelling and Simulation

Credits	Grading	Recurrence	Duration	Language	Level	Version
5 CP	graded	Irregular	1 term	German/English	5	2

Mandatory			
T-MATH-102271	Parallel Computing	5 CP	Krause, Wieners

Assessment
Examination prerequisite: passed computer lab

Success is assessed in the form of an oral examination lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
Graduates

- know the fundamentals of parallel computing,
- have an overview of scientific computing concepts on parallel computers,
- have theoretical and practical experience with parallel programming models and parallel solution methods,
- can independently implement simple practical tasks in a scalable manner

Content

- Parallel programming models
- Parallel solving of linear equation systems
- Parallel finite differences, finite elements, finite volumes methods
- Domain decomposition methods
- Parallel matrix-matrix and matrix-vector operations
- Convergence and performance analysis
- Load balance techniques
- Applications from the natural sciences and engineering

Module Grade Calculation
The module grade is the grade for the oral examination.

Workload
Total workload: 150 hours

Attendance time: 60 hours

- Course including module examination during the course of study

Self-study: 90 hours

- Consolidation of course content through follow-up work on lecture content at home
- Completion of exercises
- Consolidation of course content using appropriate literature and internet research
- Preparation for the module examination during the course of study

Recommendations
Knowledge of a higher-level programming language (C++, Java, Fortran) and basic knowledge of the numerical treatment of differential equations (finite differences or finite elements) are recommended.

M 5.109 Module: Particle Technology [M-CIWVT-104378]

Coordinators: Prof. Dr.-Ing. Achim Dittler
Organisation: KIT Department of Chemical and Process Engineering
Part of: Advanced Fundamentals (CIW)
Technical Supplement Course

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-106028	Particle Technology Exam	6 CP	Dittler

Assessment
Learning control is a written examination lasting 135 minutes (15 minutes reading time and 120 minutes to complete the tasks).

Prerequisites
None

Competence Goal
Students develop an advanced understanding of properties & behavior of particles and particulate systems in important engineering applications; they are able to use this understanding for calculations and design of selected processes

Content
Description and behavior of particles and particulate systems in engineering applications; selected unit operations in particle technology.

Module Grade Calculation
The module grade ist the grade of the written exam.

Workload

- Attendance time (Lecture): 45 h
- Homework: 90 h
- Exam Preparation: 45 h

M 5.110 Module: Physical Foundations of Cryogenics [M-CIWVT-103068]

Coordinators: Prof. Dr.-Ing. Steffen Grohmann
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Technical Thermodynamics

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	English	4	1

Mandatory			
T-CIWVT-106103	Physical Foundations of Cryogenics	6 CP	Grohmann

Assessment
Learning control is an oral examination lasting approx. 30 minutes.

Prerequisites
None

Competence Goal
Understanding of the mechanisms of entropy generation, and the interaction of the first and the second law in thermodynamic cycles; understanding of cryogenic material properties; application, analysis and assessment of real gas models for classical helium I; understanding of quantum fluid properties of helium II based on Bose-Einstein condensation, understanding of cooling principles at lowest temperatures.

Content
Relation between energy and temperature, energy transformation on microscopic and on macroscopic scales, physical definitions of entropy and temperature, thermodynamic equlibria, reversibility of thermodynamic cycles, helium as classical and as quantum fluid, low-temperature material properties, cooling methods at temperatures below 1 K.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 45 h
- Homework: 45 h
- Exam Preparation: 90 h

Literature
Schroeder, D.V.: An introduction to thermal physics. Addison Wesley Longman (2000)

Pobell; F.: Matter and methods at low temperatures. 3rd edition, Springer (2007)

M 5.111 Module: Polymer Thermodynamics [M-CIWVT-106882]

Coordinators: Prof. Dr. Sabine Enders
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2024)
Specialized Course I / Technical Thermodynamics (Usage from 10/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German/English	5	1

Mandatory			
T-CIWVT-113796	Polymer Thermodynamics	6 CP	Enders, Zeiner

Assessment
Learning contrl is an oral exam, duration approx. 30 minutes.

Prerequisites
None

Competence Goal
Students are able to understand complex phase equilibria and they are able to calculate these complex phase equilibria and know the required thermodynamic models and the corresponding parameter fitting procedure.

Content

- Phase equilibria of multi-component mixtures (e.g. polymers)
- numerical methods for calculation of complex phase equilibria
- thermodynamic models
- estimation of model parameters

Module Grade Calculation
The grade of the module ist the grade of the oral exam.

Additional Information
If required, the course will be offered in English.

Workload

- Lectures and Exercises: 90 hrs.
- Self-study: 45 hrs.
- Exam preparation: 45 hrs.

Literature

5.112 Module: Power-to-X – Key Technology for the Energy Transition [M-CIWVT-105891]

Coordinators: Prof. Dr.-Ing. Roland Dittmeyer
Dr. Peter Holtappels

Organisation: KIT Department of Chemical and Process Engineering

Part of: Technical Supplement Course (Usage from 4/1/2022)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each term	1 term	English	5	1

Mandatory			
T-CIWVT-111841	Power-to-X – Key Technology for the Energy Transition	4 CP	Dittmeyer, Holtappels
T-CIWVT-111842	Practical in Power-to-X: Key Technology for the Energy Transition	2 CP	Dittmeyer, Holtappels

Assessment
The learning control consists of two partial achievements:

1. Lab, completed coursework
2. Oral examination lastin approx. 30 minutes

Competence Goal
The students are familiar with the rationale and the basic concepts of Power-to-X conversion. They know the major routes and individual components and what can be expected in terms of performance metrics both on component and process level. They have developed a basic understanding of water and steam electrolysis as well as of plasma splitting of carbon dioxide. Moreover, they had a first encounter with real container plants for electrolysis and fuel synthesis in the Energy Lab 2.0 as well as modular setups for plasma splitting, fuel synthesis and fuel upgrading.

Content
The module will provide an introduction to Power-to-X technologies which are expected to play a major role in the future energy system. The rationale for converting renewable electrical energy into fuels and chemicals will be explained and substantiated with data from relevant studies. Concepts for central and distributed Power-to-X facilities will be described with a focus on modular technologies for distributed production. Different options for water and steam electrolysis as well as selective electrochemical reduction of carbon dioxide will be discussed with a view to technology readiness level, energy efficiency, and cost. The alternative concept of plasma-based activation of inert molecules will be introduced and the status of this technology will be assessed and compared to electrolysis. Basic process layouts for production of synthetic methane, liquid hydrocarbons, methanol and ammonia from renewable electrical energy, carbon dioxide and water will be described and assessed in terms of material and energy flows and options for process integration. Moreover, concepts for offshore Power-to-X production will be explained and current research in this area will be highlighted. Finally, industrial project initiatives in the field of Power-to-X will be presented and discussed. The practical will cover four days and will be done in larger groups of up to 15 persons. Participants will be introduced to the containerized Power-to-Liquid Plant and its infrastructure in the Energy Lab 2.0 at KIT Campus North. They will work at this site with a containerized water electrolyzer and steam electrolyzer for hydrogen production. Moreover, the group will be made familiar with an experimental setup for plasma splitting of carbon dioxide in the plasma lab jointly operated by IMVT and IHM and with the synthesis and upgrading of Fischer-Tropsch-Fuels in the synfuel lab at IMVT.

Module Grade Calculation
The module grade is the grade of the oral exam.

Additional Information
Practical course: Dates by arrangement, Location: IMVT, KIT Campus Nord, Energy Lab 2.0, Building 605.

Workload

- Attendance timet:
  lecture: 30 h,
  lab: 16 h (4 dates)
- Self-study: 90 h
- Exam preparation: 45 h

Literature

Florian Ausfelder, Hannah Dura, 3. Roadmap des Kopernikus-Projektes P2X Phase II, OPTIONEN FÜR EIN NACHHALTIGES ENERGIE- SYSTEM MIT POWER-TO-X- TECHNOLOGIEN, Transformation – Anwendungen – Potenziale, 2021 (https://www.kopernikus-projekte.de/aktuelles/news/p2x_roadmap_3_0)

5.113 Module: Practical Course Combustion Technology [M-CIWVT-104321]

Coordinators: Dr.-Ing. Stefan Raphael Harth
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Combustion Technology

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German/English	4	1

Mandatory			
T-CIWVT-108873	Practical Course Combustion Technology	4 CP	Harth

Assessment
The examination is an oral examination with a duration of 20 minutes (section 4 subsection 2 number 2 SPO) about experiments.

The grade of the oral examination is the module grade.

Prerequisites
None

Competence Goal
The students are able to analyze results of combustion experiments and to assess the measurements methods.

Content
The laminar flame speed is experimentally determined, stability limits of combustion systems are investigated and the process of combustion is analyzed. Different measurement techniques (e.g. exhaust gas probes or optical measurement techniques) are applied.

Additional Information
Dates of experiments by arrangement. Please contatct the responsible person (stefan.harth@kit.edu) for registration by Mai the 15th by the latest.

If necessary, the course will be held in English.

Workload

- Experiments: 30 h (3 - 4 experiments depending on the complexity of the used test stands)
- Homework, test records: 50 h
- Exam preparation: 40 h

M 5.114 Module: Practical Course in Water Technology [M-CIWVT-103440]

Coordinators: Dr. Andrea Hille-Reichel
Prof. Dr. Harald Horn
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Water Technology (Usage from 10/1/2019)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	English	4	3

Mandatory			
T-CIWVT-106840	Practical Course in Water Technology	3 CP	Hille-Reichel, Horn
T-CIWVT-110866	Excursions: Water Supply	1 CP	Hille-Reichel, Horn

Assessment
The learning control consists of:

- Laboratory: 6 Experiments including entrance test, protocol; presentation about a selected experiment (about 15 minutes); final test
- Two excursions, protocols about excursions (ungraded)

Prerequisites
The module can only be taken in combination with the *Water Technology* module.
Participation in the lab course is possible after participating in the excursion.

Modeled Prerequisites
The following conditions have to be fulfilled:

1. The module M-CIWVT-103407 - Water Technology must have been started.

Competence Goal
Students can explain the most important processes in water treatment. They are able to do calculations, and to compare and interpret data. They learn how to use different methods, and to interpret different processes.

Content
Introductory lecture and student presentations in three 90-minute sessions.
Lab: Six experiments on the topics of

- equilibrium study of the calcium carbonate system
- flocculation
- adsorption on activated carbon
- photochemical oxidation
- liquid chromatography
- sum parameters

In addition, excursions to two different treatment plants (waste water, drinking water).

Module Grade Calculation
Module grade is the grade of the laboratory and is formed as follows:

A total of 150 points can be achieved:

- maximum 60 points for the experiments (10 each)
- maximum 15 points for the presentation
- maximum 75 points for the final certificate

At least 80 points must be achieved in order to pass.

Workload
Attendance time: Introduction and presentation (4 h), 6 Experiments (4 h each), 2 excursions: 36 h
Preparation/follow-up, protocols, presentation: 50 h
Examination + exam preparation: 34 h

M 5.115 Module: Principles of Ceramic and Powder Metallurgy Processing [M-CIWVT-104886]

Coordinators: apl. Prof. Dr. Günter Schell
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Applied Rheology

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-MACH-102111	Principles of Ceramic and Powder Metallurgy Processing	4 CP	Schell

Assessment
Learning control is an oral examination with a duration of about 25 minutes, SPO section 4 subsection 2.

Prerequisites
None

Competence Goal
The students know the basics of characterization of powders, pastes and suspensions. They have a fundamental understanding of the process technology for shaping of particulate systems. They are able to use these fundamentals to design selected wet- and dry forming processes.

Content
The course covers fundamentals of the process technology for shaping of ceramic or metal particle systems. Important shaping methods are reviewed. The focus is on characterization and properties of particulate systems, and, in particular, on process technology for shaping of powders, pastes, and suspensions.

Module Grade Calculation
Module grade is the grade of oral examination.

Workload

- Attendance Time: 30 h
- Homework: 45 h
- Exam preparation: 45 h

Recommendations
Knowledge of general material science is required.

Literature

M 5.116 Module: Principles of Constrained Static Optimization [M-CIWVT-106313]

Coordinators: Dr.-Ing. Pascal Jerono
Prof. Dr.-Ing. Thomas Meurer

Organisation: KIT Department of Chemical and Process Engineering

Part of: Technical Supplement Course (Usage from 10/1/2023)
Specialized Course I / Automation and Process Systems Engineering (Usage from 10/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	English	5	1

Mandatory			
T-CIWVT-112811	Principles of Constrained Static Optimization	4 CP	Jerono, Meurer

Assessment
Learning control is an oral exam with a duration of about 45 minutes.

Prerequisites
None

Competence Goal
Students have an in-depth understanding of static optimization with constraints. They understand the underlying mathematical concepts and can apply them to new problems. They have a comprehensive understanding of optimization methods and are able to apply these methods independently to static optimization problems. Students are familiar with various numerical solution approaches, understand how they work, and can implement them for optimization problems.

Content
Optimization problems arise in a broad variety in different scientific and engineering domains ranging from the fit of parameter based on a performance criterion to finding extreme values of an objective function and further extending to machine learning applications. While dynamic optimization (addressed on the module M-CIWVT-106317) involves dynamical systems in static optimization the minimization (maximization) of functions subject to equality and inequality constraints is considered. This module gives an introduction to the mathematical analysis and numerical solution of unconstrained and constrained static optimization problems. The lecture addresses the following topics:

- Fundamentals of static optimization problems
- Unconstrained static optimization
- Constrained static optimization
- Numerical methods

Selected examples are considered and solved in the exercises and dedicated computer exercises.

Module Grade Calculation
The grade of the module ist the grade of the oral exam.

Workload
Attendance time: Lectures: 15 hrs. exercises: 15 hrs.

Self-study: 50 hrs.

Exam praparation: 40 hrs.

M 5.117 Module: Principles of Medicine for Engineers [M-MACH-102720]

Coordinators: apl. Prof. Dr. Christian Pylatiuk
Organisation: KIT Department of Mechanical Engineering

Part of: Technical Supplement Course
Specialized Course I / Biopharmaceutical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German	4	2

Mandatory			
T-MACH-105235	Principles of Medicine for Engineers	4 CP	Pylatiuk

Assessment
A performance assessment is held in form of a written examination of 60 minutes.

Prerequisites
none

Competence Goal
Students have a comprehensive understanding of the functioning and anatomical construction of organs, which are assigned to different medical disciplines. Furthermore, they know the physical basics, the technical solutions and the essential aspects of the application of medical technology procedures in diagnostics and therapy. They are familiar with common clinical pictures in the different medical disciplines and their relevance in health care. Through their acquired knowledge, students can communicate with physicians about medical-technical procedures and assess mutual expectations more realistically.

Content
Definition of disease and health and history of medicine, evidence-based medicine" and personalized medicine, nervous system, conduction, musculoskeletal system, cardiovascular system, anesthesia, respiratory system, sensory organs, gynecology, digestive organs, surgery, nephrology, orthopedics, immune system, genetics.

Module Grade Calculation
The module grade is the grade of the written exam.

Workload

1. Attendance time Lecture: 15 * 2h = 30h
2. Pre- and postprocessing time Lecture: 15 * 3h= 45h
3. Exam preparation and attendance exam: 45h

Total: 120h = 4 LP

Recommendations
The content of module MMACH-105228 complements this lecture.

M 5.118 Module: Process Analysis: Modeling, Data Mining, Machine Learning [M-ETIT-105594]

Coordinators: Prof. Dr.-Ing. Michael Heizmann
Organisation: KIT Department of Electrical Engineering and Information Technology
Part of: Technical Supplement Course (Usage from 10/1/2022)
Specialized Course I / Automation and Process Systems Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	2

Mandatory			
T-ETIT-111214	Process Analysis: Modeling, Data Mining, Machine Learning	4 CP	Borchert, Heizmann

Assessment
Success control takes place in the form of an oral examination lasting approx. 30 minutes.

Prerequisites
none

Competence Goal
Students learn about process engineering issues from the perspective of industrial practice, which are dealt with using physico-chemical modeling and data science methods. Students learn about important relationships in process engineering and can explain these using example processes. They are able to recognize relevant process data and select and apply suitable modelling approaches for their interpretation. Students can carry out practical analyses with process data and apply methods of varying complexity. Students are familiar with the data analysis value chain and are able to select a suitable data analysis method. The focus is on teaching broad methodological knowledge and application using practical examples. Students are referred to specialized in-depth lectures and/or in-depth literature.

Content

Aims of process technology

- Material and energy conversion by means of chemical, mechanical, thermal or biological operations
- Basic operations (selection)
- System examples
- Important variables in process technology (temperature, pressure, composition,...)
- Economic efficiency in the process industry

Data acquisition

- Measured variables and measuring principles (selection)
- Measurement uncertainty

Models of process technology

- Balance equations (selection)
- Constitutive equations (selection)
- Solving balance equations (example in Matlab)
- Parameter uncertainty and estimation
- Data-driven models
- Grey box models / hybrid models

Data analysis

- Requirements for data analysis in the process industry
- Cost-effectiveness and prioritization of process analyses
- Data pre-treatment
- Application of data mining and machine learning
- Online processes

Excursion

- Excursion to BASF Ludwigshafen

Term paper 1: Process model and simulation.

Term paper 2: Identification and analysis.

Homework 3: Predictive maintenance.

Module Grade Calculation

The module grade is the grade of the oral examination.

Workload

28 hours of teaching,

30 hrs. Homework,

32 hours of preparation and follow-up work, exam preparation and implementation.

Recommendations

Basics in: Mathematics, differential equations, linear algebra, statistics, basic knowledge of Matlab

M 5.119 Module: Process and Plant Design in Biotechnology [M-CIWVT-107357]

Coordinators: Prof. Dr.-Ing. Dirk Holtmann
Organisation: KIT Department of Chemical and Process Engineering
Part of: Advanced Fundamentals (BIW) (Usage from 10/1/2025)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-114498	Process and Plant Design in Biotechnology - Seminar	2 CP	Holtmann
T-CIWVT-114499	Process and Plant Design in Biotechnology - Written Exam	4 CP	Holtmann

Assessment
The learning control consists of two partial achievements:

- Examination of another type/ prerequisite for the oral exam: Seminar talk lasting approx. 10 minutes during the course (graded).
- written examination lasting 90 minutes

Prerequisites
The Seminar "Biotechnological Production" is a precondition for admittance to the written exam.

Competence Goal
Students are able to apply the knowledge of unit operations in upstream and downstream processes to plan and evaluate overall processes in biotechnology.They can also use mass and energy balances and graphical representations to implement systems theory considerations for biotechnological processes. Furthermore, they can apply their process engineering knowledge to the planning of biotechnological and biopharmaceutical plants, taking into account hygienic design.

Content
After an introduction to the basic unit operations and their calculation principles, the common basic principles of biotechnological production processes are first discussed. The focus is on the interactions between the biological systems and the process. Flow diagrams and mass and energy balances are discussed using examples. In addition, examples from the areas of hygienic design, sterilization, critical supply media, measurement technology, process analysis technology and formulation are discussed.

Module Grade Calculation
LP-weighted mean of the two partial achievements.

Workload

- Attendance time (Lecture): 60 hrs
- Self-study: 40 hrs
- Preparation presentation at the seminar: 20 hrs
- Attendance time (Lecture): 60 hrs

Literature
Will be announced.

5.120 Module: Process and Plant Safety [M-CIWVT-104352]

Coordinators: Hon.-Prof. Dr. Jürgen Schmidt
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Fuel Technology
Specialized Course I / Energy Process Engineering
Specialized Course I / Environmental Process Engineering
Specialized Course I / Thermal Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	5	1

Mandatory			
T-CIWVT-108912	Process and Plant Safety	4 CP	Schmidt

Assessment
Learning control is an oral examination lasting approx. 30 minutes.

Prerequisites
None

Competence Goal
The students are able to systematically assess the risks of technical systems, assess the effects of possible accidents and define suitable safety measures. The lecture is divided into thematic blocks. Lecture block 01 is an introduction to the topic:

Lecture blocks

1. Introduction
2. risk management
3. hazardous substances
4. Exothermic Chemical Reactions
5. safety devices
6. effluent systems
7. Dispersion of hazardous substances
8. PLT protective devices
9. explosion protection
10. electrostatics

Content
Introduction to safeguarding processes and plants to protect people and the environment from potential hazards of technical plants in the chemical, petrochemical, pharmaceutical and oil and gas sectors. Risk management can be used to prevent incidents and limit the impact of events. This includes topics such as technical safety of plants, risk management, prevention of hazards from substances and dangerous chemical reactions, design of protective devices for emergency relief such as safety valves, bursting discs and downstream containment devices. Modern process control systems, emission and dispersion of hazardous substances in the atmosphere, and explosion and fire protection.

Module Grade Calculation
The module grade ist the grade of the oral exam.

Workload

- Attendance time (Lecture): 30 hrs
- Homework: 30 hrs
- Exam Preparation: 60 hrs

M 5.121 Module: Process Development in the Chemical Industry [M-CIWVT-104389]

Coordinators: Hon.-Prof. Dr. Jürgen Dahlhaus
Organisation: KIT Department of Chemical and Process Engineering
Part of: Additional Examinations

Credits	Grading	Recurrence	Duration	Language	Level	Version
2 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108961	Process Development in the Chemical Industry	2 CP	Dahlhaus

Prerequisites
None

5.122 Module: Process Engineering for the Production of Food from Animal Origins [M-CIWVT-106699]

Coordinators: PD Dr. Volker Gaukel
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Food Process Engineering (Usage from 4/1/2024)
Specialized Course I / Bioresource Engineering (Usage from 4/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-113477	Process Engineering for the Production of Food from Animal Origins	4 CP	Gaukel

Assessment
Learning control is an oral examination with a duration about of 30 minutes.

Prerequisites
None

Competence Goal
Students understand and are able to explain conventional methods for producing foods, even complex ones, from animals. They know unit operations of relevance, both conventional and innovative approaches. They are able to design the processes according to raw material specifics. They identify correlations between process parameters and quality-determining properties of food. They are also able to transfer process knowledge between individual product groups. They know essential aspects required to assess sustainability and energy aspects of the individual process steps and complete process chains.

Students are able to apply principles of product design. This involves identifying the relationships between process parameters and the structure of a food product (process function) as well as between the inner structure of foods and their properties (property function). Based on this, they are able to analyze and solve problems in the field of food process engineering.

Students are able to use their knowledge to evaluate a process unit with regard to food production, involving aspects such as sustainability, energy efficiency, food safety and expected product quality.

Module Grade Calculation
Grade of the module is the grade of oral examination.

Workload

M 5.124 Module: Process Engineering in Wastewater Treatment [M-BGU-103399]

Coordinators: Dr.-Ing. Tobias Morck
Organisation: KIT Department of Civil Engineering, Geo and Environmental Sciences
Part of: Technical Supplement Course

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	4	1

Mandatory			
T-BGU-106787	Process Engineering in Wastewater Treatment	6 CP	Morck

Assessment
- 'Teilleistung' T-BGU-106787 with written examination according to § 4 Par. 2 No. 1

details about the learning control see at the 'Teilleistung'

Prerequisites
none

Competence Goal
Students acquire knowledge about typical techniques in wastewater treatment at local and international level. They are able to perform a technical evaluation and describe dimensioning approaches taking into consideration legal boundary conditions. Students analyze, evaluate and optimize operation of plant technologies. They focus on energy-efficient plant designs considering the most relevant factors affecting the total costs.Students can analyze the situation in emerging and developing countries making a comparison with that in industrialized countries. Based on that, they are able to develop water-related management strategies.

Content
Municipal Wastewater Treatment:Students gain deep knowledge about design and operation of typical process technologies in municipal wastewater treatment in Germany. Following processes are covered:

- different activated sludge processes
- anaerobic technologies and energy-recovery systems
- filtration technologies
- wastewater disinfection and pathogen removal
- chemical and biological phosphorus removal
- micro-pollutants removal
- resource management and energy efficiency

International Sanitary Engineering:Students get acquainted with the design and operation used for wastewater treatment at international level. They analyze, evaluate and take decisions when new and more holistic oriented met hods can be implemented. Following topics are covered:

- activated sludge processes
- trickling filters and rotating biological contactors
- treatment ponds
- retention soil filter / Wetlands
- UASB/EGSB/Anaerobic filter
- decentralized versus centralized systems
- material flow separation
- energy-recovery from wastewater
- drinking water purification
- waste management

Module Grade Calculation
grade of the module is grade of the exam

Additional Information
IMPORTANT:

The module will not be offered anymore as from summer term 2019. It will be replaced by the module Wastewater Treatment Technologies.

____

group presentation and written report is internal examination prerequisite.

Workload
contact hours (1 HpW = 1 h x 15 weeks):

- Municipal Wastewater Treatment lecture/exercise: 30 h
- International Sanitary Engineering lecture/exercise: 30 h

independent study:

- preparation and follow-up lecture/exercises Municipal Wastewater Treatment: 30 h
- preparation and follow-up lecture/exercises International Sanitary Engineering: 30 h
- examination preparation: 60 h

total: 180 h

Recommendations

M 5.125 Module: Process Instruments and Machinery and Their Process Integration [M-CIWVT-104351]

Coordinators: Dr.-Ing. Manfred Nagel
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Mechanical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-108910	Process Instruments and Machinery and Their Process Integration	4 CP	Nagel

Assessment
Learning control is an oral exam lasting approx. 30 minutes.

Prerequisites
None

Competence Goal
Skills to develop holistic processes for product design. Knowledge about task of engineers in process industry.

Content
Teaching of methods and creating awareness about boundary conditions related to scientific and systematic engineering approaches in process development. In Bachelorstudies and during basic studies in process technology focus was laid on the description/analysis of different physical phenomena. Their linkage in the course of selection, dimensioning, interconnection and optimization of apparatuses/ machines and their integration during process development will be outlined and illustrated by a variety of real-life examples.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 hrs
- Homework: 60 hrs
- Exam Preparation: 30 hrs

M 5.126 Module: Process Modeling in Downstream Processing [M-CIWVT-103066]

Coordinators: apl. Prof. Dr. Matthias Franzreb
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Biopharmaceutical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-106101	Process Modeling in Downstream Processing	4 CP	Franzreb

Assessment
Learning control is an oral exam lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
Students are able to sum up and explain equilibrium and kinetic equations relevant for chromatography modeling. They are able to explain the methods used for determination of equilibrium and kinetic parameters and can discuss examples. They are familiar with the principle of complex downstream processes, e.g. simulated moving beds, and can explain the differences to conventional chromatography. Using commercial software they are able to simulate chromatography processes and to analyze the results. On this basis they can optimize process parameters and fit them in order to meet given targets such as purity or yield. They can evaluate different processes and choose the variant for a given task.

Content
Fundamentals and practical examples of chromatography modeling,

Design rules for Simulated Moving Beds, Design of Experiments (DOE)

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 h
- Homework: 60 h
- Exam Preparation: 30 h

M 5.127 Module: Process Technology [M-CIWVT-104374]

Coordinators: Dr. Frederik Scheiff
Organisation: KIT Department of Chemical and Process Engineering
Part of: Advanced Fundamentals (mandatory)
Technical Supplement Course

Credits	Grading	Recurrence	Duration	Language	Level	Version
8 CP	graded	Each term	2 terms	German	4	1

Mandatory			
T-CIWVT-106148	Practical Course Process Technology and Plant Design	0 CP	Scheiff
T-CIWVT-106149	Initial Exam Process Technology and Plant Design	0 CP	Scheiff
T-CIWVT-106150	Process Technology and Plant Design Written Exam	8 CP	Scheiff

Assessment
The module exam consists of three partial achievements:

- A written examination lasting 180 minutes
- A practical course in process and plant engineering, completed coursework
- An admission exam to the practical course process and plant engineering, completed coursework

Prerequisites
The admission exam is prerequisite for the practical course.

Competence Goal
The students are enabled to analyze technical processes and plants and describe the process on the basis of P&I-diagrams. They are capable to apply their engineering and process engineering basics on industrial processes and plants. They are prepared to design and evaluate process steps and process chains based on simplistic assumptions and characteristic numbers.

Content

- Engineering basics: P&I-diagram, flowsheet simulation, process optimization, safety, economical evaluation
- Application of engineering basics in practical course
- Process engineering in technical application, industrial production processes: e.g. steamcracker, methanol, sulfuric acid, ammonia, cement, pulp

Module Grade Calculation
The module grade ist the grade of the written exam.

Workload

- Attendance time: 43 h
- Homework: 87 h
- Exam preparation: 80 h
- Internship: Attendance time: 9 h + preparation and follow-up time: 21 h

M 5.128 Module: Processes and Process Chains for Renewable Resources [M-CIWVT-104422]

Coordinators: Prof. Dr. Nicolaus Dahmen
Prof. Dr.-Ing. Jörg Sauer

Organisation: KIT Department of Chemical and Process Engineering

Part of: Technical Supplement Course
Specialized Course I / Bioresource Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108997	Processes and Process Chains for Renewable Resources	6 CP	Dahmen, Sauer

Assessment
Learning control is an oral examination lastin approx. 20 minutes.

Prerequisites
None

Competence Goal
The students become able to:

- understand and assess the technical background of important process steps for the utilization of renewable resources,
- Establish process chains for converting various renewable raw materials,
- apply the lessons learned to develop biorefinery concepts for manufacturing products (e.g., platform chemicals, materials) from renewable raw resources.
- Students will be able to apply the content taught in the lecture to the exemplary development of a biorefinery and present the results in a structured manner in the form of a seminar presentation.

Content
The course comprises the following contents:

- Introduction to building a common knowledge base, among others the presentation of today's most important utilization pathway for biomass, biomass potentials, future usage scenarios,
- Essential technical fundamentals for biomass processing. The focus is on the use of lignocellulosic biomass. Procedures for pretreatment, biomass decomposition and separation as well as for conversion of the respective fractions are learned,
- Systematics and analysis of process chains with renewable raw materials based on already established processes such as paper or sugar mills. Extension of the concepts to possible future biorefineries,
- In the exercise, parallel to the lecture, the learned will be applied and implemented by development of an exemplary biorefinery. The results will be presented in a semiar.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Lectures and exercises: 45 hrs
- Homework: 45 hrs
- Preparation of exercises: 30 hrs
- Prepration of presentations: 30rs
- Exam preparation: 30 h

M 5.129 Module: Processing of Nanostructured Particles [M-CIWVT-103073]

Coordinators: Prof. Dr.-Ing. Hermann Nirschl
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Mechanical Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-106107	Processing of Nanostructured Particles	6 CP	Nirschl

Assessment
Learning control is an oranl examination lasting approx. 25 minutes.

Prerequisites
None

Competence Goal
Ability to design a process technology for the manufacturing and production of nanoscale particles

Content
Development of technical process in particle engineering; particle characterisation, interface engineering, particle synthesis;
Typical processes: grinding, mixing, ganulation, selective separation,
classifying; fundamentals of apparatus and devices; simulation techniques, simulation tools

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 60 h
- Homework: 60 h
- Exam Preparation: 60 h

M 5.130 Module: Production and Development of Cancer Therapeutics [M-CIWVT-106563]

Coordinators: PD Dr. Gero Leneweit
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2023)
Specialized Course I / Biopharmaceutical Process Engineering (Usage from 10/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-113230	Production and Development of Cancer Therapeutics	4 CP	Leneweit

Assessment
Learning control is an oral examination lasting approx. 30 minutes.

Prerequisites
None

Competence Goal
Students acquire skills to autonomously analyse the product requirements of active substances and drug formulations and to independently plan and realise manufacturing technologies for drug substances and carrier systems.

Content
- Risk factors and stages of carcinogenesis
- therapeutic targets
- mechanisms of chemotherapies, immunotherapies, DNA and RNA therapies
- mechanisms of therapy resistance and overcoming strategies
- drug delivery systems and manufacturing technologies
- scaling; drug loading and coating
- industrial processes
- targeted cancer therapies
- receptors and ligands
- drug accumulation
- (pre-) clinical testing
- regulatory and economic aspects
- innovation potentials and application perspectives

Module Grade Calculation
The module grade ist the grade of the oral exam.

Workload
- Attendance time: 30 hrs
- Self-study: 60 hrs
- Exam preparation: 30 hrs

Literature
Lecture notes with references and topic-specific literature recommendations

M 5.131 Module: Reaction Kinetics [M-CIWVT-104283]

Coordinators: Dr.-Ing. Steffen Peter Müller
Organisation: KIT Department of Chemical and Process Engineering
Part of: Specialized Course I / Chemical Process Engineering
Specialized Course I / Technical Thermodynamics (Usage from 10/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	5	1

Mandatory			
T-CIWVT-108821	Reaction Kinetics	6 CP	Müller

Assessment
The examination is an oral examination with a duration of about 20 minutes

Prerequisites
None

Competence Goal
Students are capable to discuss the cause and the differing elementary steps of homogen reactions, and they are qualified to calculate rate coefficients from experimental studies/data. Because of various examples, students can identify and analyse reactions by different elementary steps and they are capable to evaluate homogen reactions critcally.

Content
Basics: theories of reaction kinetics, thermodynamics and the relationship to kinetics, chain reactions.
Application: gas phase and chain reactions, photochemistry, reactions in solution, oxidation reactions, transport phenomena.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 45 h
- Homework: 45 h
- Exam Preparation: 90 h

5.132 Module: Reactor Modeling with CFD [M-CIWVT-106537]

Coordinators: Prof. Dr.-Ing. Gregor Wehinger
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2024)
Specialized Course I / Chemical Process Engineering (Usage from 4/1/2024)
Specialized Course I / Modelling and Simulation

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	English	4	2

Mandatory			
T-CIWVT-113224	Reactor Modeling with CFD	6 CP	Wehinger

Assessment
Learning control is an examination of another type: presentation and term paper.

Prerequisites
None

Competence Goal
The students are able to

- describe and apply the mathematical and physical principles of computational fluid dynamics (CFD),
- use the commercial CFD software STAR-CCM+ independently and thoroughly (preprocessing, solving, postprocessing),
- develop a CFD reactor model for an unknown chemical process engineering problem and investigate alternative reactor designs based on this model,
- analyze and evaluate the results obtained, also using virtual reality (VR),
- identify and evaluate errors and uncertainties in CFD models,
- visualize, present, and critically discuss their CFD results in the form of a final report.

Content

1. Conservation laws for momentum, mass and energy
2. The Finite-Volume-Method, solution algorithms, and boundary conditions
3. Computational meshes
4. CFD- Modelling of chemical reactors
5. Use of virtual reality in CFD
6. Basics of writing a scientific paper

Module Grade Calculation
The module grade is the grade of the examination of another type.

Workload

- Attendance time: 45 h
- Self-study: 90 h
- Exam preparation: 45 h

Literature

- Ferziger, Perić: Numerische Strömungsmechanik; 2020 ; Springer
- Versteeg, Malalasekera; An Introduction to Computational Fluid Dynamics: The Finite Volume Method (2nd Edition); 2007; Pearson

M 5.133 Module: Refinery Technology - Liquid Fuels [M-CIWVT-104291]

Coordinators: Prof. Dr. Reinhard Rauch
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Fuel Technology

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108831	Refinery Technology - Liquid Fuels	6 CP	Rauch

Assessment
Learning control is an oral examination lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
The students are enabled to balance modern processes for the production of liquid fuels and to put them into context of a modern refinery. This knowledge can be transferred to the evaluation and the development of other processes.

Content
Introduction to liquid chemical fuels: sorces, resources/rerserves, consumption, characteristic properties of raw materials and products, overview of conversion processes.

Petroleum and petroleum refining: characterization of petroleum crude oils and refinery products, physical separation processes, chemical conversion/upgrading processes (chemical equilibrium, rection technology etc.), refinery structures.

Non-conventional liquid fuels e. g. from synthesis processes or biomass feedstocks (vegetable oil and derived fuels, alcohols, synthetic liquid fuels).

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 45 hrs
- Homework: 75 hrs
- Exam Preparation: 60 hrs

Literature

- Elvers, B. (Ed.): Handbook of Fuels, Energy Sources for Transportation, Wiley VCH 2008.
- Lucas, A. G. (Ed.): Modern Petroleum Technology, Vol. 2 Downstream, John Wiley 2000.

5.134 Module: Refrigeration B - Foundations of Industrial Gas Processing [M-CIWVT-104354]

Coordinators: Prof. Dr.-Ing. Steffen Grohmann
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Thermal Process Engineering
Specialized Course I / Technical Thermodynamics

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108914	Refrigeration B - Foundations of Industrial Gas Processing	6 CP	Grohmann

Assessment
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

Prerequisites
None

Competence Goal
Understanding the principles of different processes for gas liquefaction and gas separation; Analysing processes in order to reveal the sources of energy demand; Applying the principles of thermodynamics of mixtures and analysing the states of fluids in rectification columns; Assessing the potential of technical concepts from a thermodynamic point of view

Content
Gas liquefaction processes, process analyses, refrigerators and mixed-refrigerant cycles, gas separation by low-temperature rectification, air separation and extraction of noble gasses, processing and separation of natural gas, ethylene production, processing of H2-enriched gas mixtures, storage and transport of liquefied gasses

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 45 h
- Homework: 45 h
- Exam Preparation: 90 h

M 5.135 Module: Rheology of Complex Fluids and Advanced Rheometry [M-CIWVT-104331]

Coordinators: Dr.-Ing. Claude Oelschlaeger
Prof. Dr. Norbert Willenbacher

Organisation: KIT Department of Chemical and Process Engineering

Part of: Technical Supplement Course
Specialized Course I / Applied Rheology

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108886	Rheology of Complex Fluids and Advanced Rheometry	4 CP	Oelschlaeger, Willenbacher

Assessment
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

The duration of the examination differs in the case of a specialized subject comprehensive examination and is approximately 15 minutes.

The grade of the oral examination is the module grade.

Prerequisites
None

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 h
- Homework: 70 h
- Exam Preparation: 20 h

M 5.136 Module: Rheology of Disperse Systems [M-CIWVT-104391]

Coordinators: Prof. Dr. Norbert Willenbacher
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course

Credits	Grading	Recurrence	Duration	Language	Level	Version
2 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108963	Rheology of Disperse Systems	2 CP	Willenbacher

Prerequisites
None

Workload

- Attendance time (Lecture): 15h
- Homework: 35 h
- Exam Preparation: 10 h

5.137 Module: Rheology of Polymers [M-CIWVT-104329]

Coordinators: Prof. Dr. Norbert Willenbacher
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Applied Rheology

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-108884	Rheology of Polymers	4 CP	Willenbacher

Assessment
The examination is an oral examination with a duration of about 30 minutes.

The duration of the examination differs in the case of a specialized subject comprehensive examination and is approximately 15 minutes.

Prerequisites
None

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 30 h
- Homework: 70 h
- Exam Preparation: 20 h

5.138 Module: Seminar [M-MATH-103276]

Coordinators: PD Dr. Stefan Kühnlein
Organisation: KIT Department of Mathematics
Part of: Technical Supplement Course (Usage from 4/1/2021)
Specialized Course I / Mechanical Process Engineering (Usage from 4/1/2021)

Credits	Grading	Recurrence	Duration	Language	Level	Version
3 CP	pass/fail	Each term	1 term	German	5	1

Mandatory			
T-MATH-106541	Seminar Mathematics	3 CP	

Assessment
The control of success (pass/fail) is based on a seminar talk lasting at least 45 minutes.

Prerequisites
none

Competence Goal
At the end of the module the participants should

- have analyzed a specific problem in a mathematical area
- be able to discuss subject-specific problems in the given context and present as well as defend them, using suitable media
- have summarized the most relevant results of their topic
- have communicative, organizational and didactic skills in complex problem analyses at their disposal. They can use techniques of scientific work.

Content
The specific content is based on the seminar topics being offered.

Module Grade Calculation
omitted as ungraded (pass/fail)

Workload
Total work load: 90 hours

Attendance: 30 hours

Self studies: 60 hours

- Preparation of the scientific content of the talk
- Preparation of a didactical concept for the talk
- Preparation of the presentation (blackboard, beamer, etc.)
- getting practice for the talk, creating a hand-out

M 5.139 Module: Simulation Technologies [M-CIWVT-107038]

Coordinators: Prof. Dr.-Ing. Thomas Meurer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage between 4/1/2025 and 9/30/2026)
Specialized Course I / Automation and Process Systems Engineering (Usage between 4/1/2025 and 9/30/2026)
Specialized Course I / Modelling and Simulation (Usage until 9/30/2026)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	5	1

Mandatory			
T-CIWVT-114104	Simulation Technologies - Exam	3 CP	Meurer
T-CIWVT-114141	Simulation Technologies - Prerequisite	3 CP	Meurer

Assessment
The Learning control consists of two partial achievements:

1. Examination of another type.
2. Oral examination lasting approx. 45 minutes.

Prerequisites
None

Module Grade Calculation
The module grade ist the CP-weighted average of the two partial achievements.

Workload
Attendance time 45 hrs:

- Lectures 30 hrs
- Exercises 15 hrs

Homework 135 hrs:

- Programming task an written elaboration: 30 hrs
- Preparation/ wrap-up of lectures and exercises: 45 hrs
- Exam preparation: 60 hrs

Literature

- Vorlesungsunterlagen
- Schwarz, H.R.; Köckler, N.: Numerische Mathematik, Vieweg+Teubner Verlag Wiesbaden, 2011
- Hoffmann, J.: MATLAB und SIMULINK. Beispielorientierte Einführung in die Simulation dynamischer Systeme. Addison-Wesley 1998

M 5.140 Module: Single-Cell Technologies [M-CIWVT-106564]

Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2023)

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	English	4	1

Mandatory			
T-CIWVT-113231	Single-Cell Technologies	4 CP	Grünberger

Assessment
The learning control is an oral examination lasting approx. 30 minutes.

Prerequisites
None

Competence Goal
Upon completion of the course, the students are able to:

- Know the fields and interdisciplinary nature of single-cell technologies
- Know basic methods in the field of single-cell technologies
- Are able to evaluate single-cell technologie
- Are able to choose single-cell platforms for specific biological questions
- Are aware of the complexity of the development of single-cell technologies

Content
While cell populations have historically been viewed as homogeneously behaving individuals, new research shows that cell-to-cell heterogeneity exists in all scales of biological systems. While most measurements are based on averages, individual cells can show dramatic differences in their properties such as growth, division and metabolic activity. Single-cell technologies have revolutionized our ability to delve into the intricacies of biological systems. By allowing the analysis of individual cells, these cutting-edge techniques provide insights into cellular heterogeneity, rare cell populations, and dynamic processes. Single-cell technologies range from single-cell microscopy, single-cell omics to single-cell cultivation, which all can be used to uncover hidden layers of complexity of a variety of cell types. These technologies have emerged in the last years and show a transformative, maybe revolutionizing, potential in many fields of basic and applied research of various scientific disciplines. This ranges from microbiology, biomedical research, drug discovery, biotechnology and bioprocess engineering.

The "Single-cell technologies" lecture aims to give an introduction and overview into single-cell technologies and provide students with a comprehensive understanding of the fundamental principles and practical applications of single-cell research. After a short introduction into the field, students will explore various single-cell technologies. Focus will be given on emerging field of microfluidic single-cell cultivation methods and their application. The characteristic features and functionality of selected systems are explained using current examples from science and research. Possibilities for applications in biotechnology and microbiology are discussed. The last part of the lecture provides an insight into single-cell data analysis and future challenges within the field. The course emphasizes the importance of uncovering cellular heterogeneity, and students will discover the role of these technologies in microbiology and biotechnology. They will stay updated on emerging trends and emerging application of this technically complex, but fast developing field. The interdisciplinary nature of single-cell technologies will be emphasized, fostering effective collaboration across fields. State of the art knowledge will be supported by insights into emerging fields and topics within the field. Upon completion, students will be well-prepared to contribute to cutting-edge research and innovations of single-cell technologies. The interdisciplinary and application-oriented lecture is aimed at technically interested students of molecular biotechnology, microbiology, biochemistry, bioprocess engineering, chemical engineering as well as all interested students of life sciences, chemistry, and physics.

Module Grade Calculation
The module grade is the grade of the oral exam.

Workload

- Attendance time: 30 hrs
- Self-study: 50 hrs
- Exam preparation: 40 hrs

Literature
No specific textbook is recommended.

M 5.141 Module: Sol-Gel Processes [M-CIWVT-104489]

Coordinators: Dr.-Ing. Steffen Peter Müller
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Chemical Process Engineering
Specialized Course I / Mechanical Process Engineering
Specialized Course I / Technical Thermodynamics

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-108822	Sol-Gel Processes	4 CP	Müller

Assessment
Learning control ist an oral exam lasting approx. 20 minutes.

Prerequisites
None

Competence Goal
Students are capable to describe and analyse chemically and physically the complete process from the starting material (sol) to the finished product (gel), like ceramics.
They are qualified to evaluate and estimate every single step of the entire process critically.

Content
Production of functional material via the sol-gel-process: hydrolyse and condensation, the gel-building process (gelation) and aging, deformation and rhelogy, drying-process, structure of aero- and xerogels, surface-chemistry and modyfication of the surface and finally sintering. Applications: powder, ceramics, glass, membranes and coatings.

Workload

- Attendance time (Lecture): 30 hrs
- Homework: 45 hrs
- Exam Preparation: 45 hrs

M 5.142 Module: Sol-Gel-Processes (Including Practical Course) [M-CIWVT-104284]

Coordinators: Dr.-Ing. Steffen Peter Müller
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Chemical Process Engineering
Specialized Course I / Mechanical Process Engineering
Specialized Course I / Technical Thermodynamics

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-108822	Sol-Gel Processes	4 CP	Müller
T-CIWVT-108823	Practical Course Sol-Gel Processes	2 CP	Müller

Assessment
The examination consists of:

1. Oral examination lastin approx. 20 minutes
2. Ungraded Laboratory work

Prerequisites
None

Competence Goal
Students are capable to describe and analyse chemically and physically the complete process from the starting material (sol) to the finished product (gel), like ceramics.
They are qualified to evaluate and estimate every single step of the entire process critically.

Content
Production of functional material via the sol-gel-process: hydrolyse and condensation, the gel-building process (gelation) and aging, deformation and rhelogy, drying-process, structure of aero- and xerogels, surface-chemistry and modyfication of the surface and finally sintering. Applications: powder, ceramics, glass, membranes and coatings.

Module Grade Calculation
The module grade is the grade of the oral exam.

Workload

- Attendance time (Lecture and lab):45 hrs
- Homework: 90 hrs
- Exam Preparation: 45 hrs

5.143 Module: Solid Liquid Separation [M-CIWVT-104342]

Coordinators: Dr.-Ing. Marco Gleiß
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Mechanical Process Engineering
Specialized Course I / Bioresource Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
8 CP	graded	Each winter term	1 term	German	5	1

Mandatory			
T-CIWVT-108897	Solid Liquid Separation	8 CP	Gleiß

Assessment
Learning control is an oral exam lasting approx. 30 minutes.

Prerequisites
None

Competence Goal
The students are able to apply the fundamental laws and the derived physical principles of the particle separation from liquids and not only to relate them to the principally suited separation apparatuses but also special variants. They have the ability to apply the relationship betwen product operation and design parameters to different separation techniques. They can analyse separation problems with scientific methods and give alternative problem solution proposals.

Content
physical fundamentals, apparatuses, applications,strategies; characterisation of particle systems and slurries; pretreatment methods to enhance the separability of slurries; fundamentals, apparatuses and process technology of static and centrifugal sedimentation, flotation, depth filtration, crossflow filtration, cake forming vacuum and gas overpressure filtration, filter centrifuges and press filters; filter media; selection criteria and scale-up methods for separation apppartuses and machines; apparatus combinations; case studies to solve sparation problems

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 60 hrs
- Homework: 80 hrs
- Exam Preparation: 100 hrs

Literature
Anlauf: Skriptum "Mechanische Separationstechnik - Fest/Flüssig-Trennung"

M 5.144 Module: Stability of Disperse Systems [M-CIWVT-104330]

Coordinators: Prof. Dr. Norbert Willenbacher
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Applied Rheology
Specialized Course I / Entrepreneurship in Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
4 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-108885	Stability of Disperse Systems	4 CP	Willenbacher

Assessment
Learning control is an oral exam lasting approx. 30 minutes.

The duration of the examination differs in the case of a specialized subject comprehensive examination and is approximately 15 minutes.

Prerequisites
None

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload
- Attendance time (Lecture): 30 hrs
- Homework: 70 hrs
- Exam Preparation: 20 hrs

5.145 Module: Statistical Thermodynamics [M-CIWVT-103059]

Coordinators: Prof. Dr. Sabine Enders
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Thermal Process Engineering
Specialized Course I / Technical Thermodynamics

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German/English	4	3

Mandatory			
T-CIWVT-106098	Statistical Thermodynamics	6 CP	Enders

Assessment
Learning control is an oral examination lasting approx. 30 minutes.

Prerequisites
Thermodynamics III

Modeled Prerequisites
The following conditions have to be fulfilled:

1. The module M-CIWVT-103058 - Thermodynamics III must have been passed.

Competence Goal
students will be able to

- explain and apply the basic principles of statistical mechanics (Boltzmann and Gibbs methods),
- establish the connection between microscopic properties and macroscopic material properties,
- develop and apply equations of state and activity coefficient models for complex material systems, and evaluate their advantages and disadvantages in process engineering.

Content
Boltzmann-method, Gibbs-method, real gases, quations of state, polymers

Module Grade Calculation
The module grade is the grade of the oral exam.

Additional Information
If required, the course will be offered in English.

Workload

- Lectures and exercises: 60 hrs
- Homework, wrap-up of lectures and exercises: 60 hrs
- Exam preparation: 60 hrs

M 5.146 Module: Students Innovation Lab [M-CIWVT-106017]

Coordinators: Prof. Dr. Norbert Willenbacher
Organisation: KIT Department of Chemical and Process Engineering
Part of: Specialized Course I / Entrepreneurship in Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
12 CP	graded	Each winter term	2 terms	German/English	5	5

Mandatory			
T-WIWI-102864	Entrepreneurship	3 CP	Terzidis
T-WIWI-110166	SIL Entrepreneurship Project	3 CP	Terzidis
Innovation Project (Election: 6 credits)			
T-CIWVT-112201	Innovation Project Porous Ceramics from the 3D Printer	6 CP	Willenbacher
T-CIWVT-113226	Innovation Project Electronic Devices from Printable Conductive Materials	6 CP	Willenbacher

Assessment
The learning control consists of three partial achievements:

- written examination on the lecture entrepreneurship lasting 60 minutes
- examination of another type: SIL entrepreneurship project: Term paper and presentation
- examination of another type: Innovation project

Prerequisites
None.

Competence Goal
The students will be introduced to the field of entrepreneurship. After successful attendance of the course, they should have an overview of the sub-areas of entrepreneurship and be able to understand basic concepts of entrepreneurship.

On the basis of known engineering knowledge, students are able to independently develop technical prototypes for the market launch of an innovation. They are capable to develop a project plan from idea to implementation. They transfer process engineering knowledge to user-convincing product innovations. Students can analyze and evaluate important economic aspects. They are able to create concepts for the procurement of raw materials and the scaling of product manufacturing to the relevant industrial scale. They know how to develop market and cost analyses as well as marketing and sales strategies. Students are able to present their product clearly and convincingly to potential customers in the form of a pitch deck.

Content

Lecture Entrepreneurship

The lecture Entrepreneurship introduces the basic concepts of entrepreneurship. The individual stages of dynamic business development are covered. Emphasis is placed on the introduction to methods for generating innovative business ideas, translating patents into business concepts, and general principles of business planning. Further contents are the conception and use of service-oriented information systems for founders, technology management and business model generation as well as lean startup methods for the implementation of business ideas by way of controlled experiments in the market.

Students Innovation Lab: One of several projects can be selected:

- **Innovation project Porous ceramics from the 3D printer**
  Porous ceramics can be used in a variety of ways, for example as:
  - Hot gas filters for industrial processes
  - Drinking water filters for the removal of contaminants such as heavy metals or viruses
  - Catalyst supports for the degradation of pollutants, environmental remediation or hydrogen production
  - Lightweight materials with high specific strength and temperature resistance
  - Biomimetic materials, e.g. as bone substitutes

  In this innovation project you will develop a prototype consisting of an innovative porous ceramic and document its technical feasibility. You will develop a concept for industrial-scale production and plan marketing. For this purpose, you will conduct a market analysis and develop a business model including price calculation, cost and financial planning as well as marketing and sales strategy.
- **Innovation Project Electronic Devices from Printable Conductive Materials**
  Printable, conductive materials can be turned into electronic devices in a variety of ways, for example:
  - by means of screen printing processes:·
    - Mass production of electrical circuits·
    - Contacting of solar cells
  - via 3D printing:·
    - Applications in the Smart and IoT sectors ·
    - Rapid Prototyping·
    - Integration of complex electrical structures in the component without additional process steps
- In this innovation project, you will develop a prototype of an electrical device that is produced with the help of a printable, conductive material and document its technical feasibility . You will develop a concept for industrial-scale production and plan marketing. For this purpose, you will conduct a market analysis and develop a business model including price calculation, cost and financial planning as well as marketing and sales strategy.

Module Grade Calculation

The module grade is the CP-weighted average of the three partial achievements.

Workload

Entrepreneurship und SIL-Project

- Attendance time: 30 hrs
- Self-study: 80 hrs
- Exam preparation: 30 hrs
- Preparation of the presentation: 40 hrs

Innovation Project

- Attendance time: 100 hrs
- Self-study: 40 hrs
- Exam preparation (term paper an presentation): 40 hrs

Teaching and Learning Methods

The two parts SIL Entrepreneurship Project and Innovation Project can only be carried out together in the same semester.

5.147 Module: Supplementary Studies on Science, Technology and Society [M-FORUM-106753]

Coordinators: Dr. Christine Mielke
Christine Myglas

Organisation: General Studies. Forum Science and Society (FORUM)

Part of: Additional Examinations (Usage from 10/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
16 CP	graded	Each term	3 terms	German	3	1

Election Notes

Students have to self-record the achievements obtained in the Supplementary Studies on Science, Technology and Society in their study plan. FORUM (formerly ZAK) records the achievements as "non-assigned" under "ÜQ/SQ-Leistungen". Further instructions on self-recording of achievements can be found in the FAQ at https://campus.studium.kit.edu/ and on the FORUM homepage at https://www.forum.kit.edu/english/. The title of the examination and the amount of credits override the modules placeholders.

If you want to use FORUM achievements for both your Interdisciplinary Qualifications and for the Supplementary Studies, please record them in the Interdisciplinary Qualifications first. You can then get in contact with the FORUM study services (stg@forum.kit.edu) to also record them in your Supplementary Studies.

In the Advanced Unit you can choose examinations from three subject areas: "About Knowledge and Science", "Science in Society" and "Science in Social Debates". It is advised to complete courses from each of the three subject areas in the Advanced Unit.

To self-record achievements in the Advanced Unit, you have to select a free placeholder partial examination first. The placeholders' title do *not* affect which achievements the placeholder can be used for!

Mandatory

Assessment

The monitoring is explained in the respective partial achievement.

They are composed of:
- Protocols
- Reflection reports
- Presentations
- Preparation of a project work
- An individual term paper
- An oral examination
- A written exam

Upon successful completion of the supplementary studies, graduates receive a graded report and a certificate issued by the FORUM.

Prerequisites

The course is offered during the course of study and does not have to be completed within a defined period. Enrollment is required for all assessments of the modules in the supplementary studies.
Participation in the supplementary studies is regulated by § 3 of the statutes. KIT students register for the supplementary studies by selecting this module in the student portal and booking a performance themselves. Registration for courses, assessments, and exams is regulated by § 8 of the statutes and is usually possible shortly before the start of the semester.
The course catalog, module description (module manual), statutes (study regulations), and guidelines for creating the various written performance requirements can be downloaded from the FORUM homepage at **https://www.forum.kit.edu/begleitstudium-wtg.php**.

Registration and exam modalities

PLEASE NOTE:
Registration on the FORUM, i.e. additionally via the module selection in the student portal, enables students to receive up-to-date information about courses or study modalities. In addition, registering on the FORUM ensures that you have proof of the credits you have earned. As it is currently (as of winter semester 24-25) not yet possible to continue additional credits acquired in the Bachelor's programme electronically in the Master's programme, we strongly advise you to digitally secure the credits you have earned by archiving the Bachelor's transcript of records yourself and by registering on FORUM.
In the event that a transcript of records of the Bachelor's certificate is no longer available - we can only assign the achievements of registered students and thus take them into account when issuing the certificate.

Competence Goal

Graduates of the Supplementary Studies on Science, Technology, and Society gain a solid foundation in understanding the interplay between science, the public, business, and politics. They develop practical skills essential for careers in media, political consulting, or research management. The program prepares them to foster innovation, influence social processes, and engage in dialogue with political and societal entities. Participants are introduced to interdisciplinary perspectives, encompassing social sciences and humanities, to enhance their understanding of science, technology, and society. The teaching objectives of this supplementary degree program include equipping participants with both subject-specific knowledge and insights from epistemological, economic, social, cultural, and psychological perspectives on scientific knowledge and its application in various sectors. Students are trained to critically assess and balance the implications of their actions at the intersection of science and society. This training prepares them for roles as students, researchers, future decision-makers, and active members of society.

Through the program, participants learn to contextualize in-depth content within broader frameworks, independently analyze and evaluate selected course materials, and communicate their findings effectively in both written and oral formats. Graduates are adept at analyzing social issues and problem areas, reflecting on them critically from a socially responsible and sustainable standpoint.

Content

The Supplementary Studies on Science, Technology and Society can be started in the 1st semester of the enrolled degree programme and is not limited in time. The wide range of courses offered by FORUM makes it possible to complete the program usually within three semesters. The supplementary studies comprises 16 or more credit points (LP). It consists of **two modules: the Basic Module (4 LP) and the Advanced Module (12 LP).**

The **basic Module** comprises the compulsory courses ‘Lecture Series Supplementary Studies on Science, Technology and Society’ and a basic seminar with a total of 4 LP.

The **Advanced Module** comprises courses totalling 12 LP in the humanities and social sciences subject areas ‘On Knowledge and Science’, ‘Science in Society’ and ‘Science in Public Debates’. The allocation of courses to the accompanying study programme can be found on the homepage **https://www.forum.kit.edu/wtg-aktuelland** in the printed FORUM course catalogue.

The 3 thematic subject areas:

Subject area 1: About Knowledge and Science

This is about the internal perspective of science: students explore the creation of knowledge, distinguishing between scientific and non-scientific statements (e.g., beliefs, pseudo-scientific claims, ideological statements), and examining the prerequisites, goals, and methods of knowledge generation. They investigate how researchers address their own biases, analyze the structure of scientific explanatory and forecasting models in various disciplines, and learn about the mechanisms of scientific quality assurance.

After completing courses in the "Knowledge and Science" area, students can critically reflect on the ideals and realities of contemporary science. They will be able to address questions such as: How robust is scientific knowledge? What are the capabilities and limitations of predictive models? How effective is quality assurance in science, and how can it be improved? What types of questions can science answer, and what questions remain beyond its scope?

Subject area 2: Science in Society

This focuses on the interactions between science and different areas of society, such as how scientific knowledge influences social decision-making and how social demands impact scientific research. Students learn about the specific functional logics of various societal sectors and, based on this understanding, estimate where conflicts of goals and actions might arise in transfer processes—for example, between science and business, science and politics, or science and journalism. Typical questions in this subject area include: How and under what conditions does an innovation emerge from a scientific discovery? How does scientific policy advice work? How do business and politics influence science, and when is this problematic? According to which criteria do journalists incorporate scientific findings into media reporting? Where does hostility towards science originate, and how can social trust in science be strengthened?

After completing courses in the "Sciene in Society" area, students can understand and assess the goals and constraints of actors in different societal sectors. This equips them to adopt various perspectives of communication and action partners in transfer processes and to act competently at various social interfaces with research in their professional lives.

Subject area 3: Science in Public Debates

The courses in this subject area provide insights into current debates on major social issues such as sustainability, digitalization, artificial intelligence, gender equality, social justice, and educational opportunities. Public debates on complex challenges are often polarized, leading to oversimplifications, defamation, or ideological thinking. This can hinder effective social solution-finding processes and alienate people from the political process and from science. Debates about sustainable development are particularly affected, as they involve a wide range of scientific and technological knowledge in both problem diagnosis (e.g., loss of biodiversity, climate change, resource consumption) and solution development (e.g., nature conservation, CCS, circular economy).

By attending courses in "Science in Public Debates," students are trained in an application-oriented way to engage in factual debates—exchanging arguments, addressing their own prejudices, and handling contradictory information. They learn that factual debates can often be conducted more deeply and with more nuance than is often seen in public discourse. This training enables them to handle specific factual issues in their professional lives independently of their own biases and to be open to differentiated, fact-rich arguments.

Supplementary credits:

Additional LP (supplementary work) totalling a maximum of 12 LP can also be acquired from the complementary study programme (see statutes for the WTG complementary study programme § 7). § 4 and § 5 of the statutes remain unaffected by this. These supplementary credits are not included in the overall grade of the accompanying study programme. At the request of the participant, the supplementary work will be included in the certificate of the accompanying study programme and marked as such. Supplementary coursework is listed with the grades provided for in § 9.

Module Grade Calculation

The overall grade of the supplementary course is calculated as a credit-weighted average of the grades that were achieved in the advanced module.

Additional Information

Climate change, biodiversity crisis, antibiotic resistance, artificial intelligence, carbon capture and storage, and gene editing are just a few areas where science and technology can diagnose and address numerous social and global challenges. The extent to which scientific findings are considered in politics and society depends on various factors, such as public understanding and trust, perceived opportunities and risks, and ethical, social, or legal considerations.

To enable students to use their expertise as future decision-makers in solving social and global challenges, we aim to equip them with the skills to navigate the interfaces between science, business, and politics competently and reflectively. In the Supplementary Studies, they acquire foundational knowledge about the interactions between science, technology, and society.

They learn:
- How reliable scientific knowledge is produced,
- how social expectations and demands influence scientific research, and
- how scientific knowledge is adopted, discussed, and utilized by society.

The program integrates essential insights from psychology, philosophy, economics, social sciences, and cultural studies into these topics. After completing the supplementary studies programme, students can place the content of their specialized studies within a broader social context. This prepares them, as future decision-makers, to navigate competently and reflectively at the intersections between science and various sectors of society, such as politics, business, or journalism, and to contribute effectively to innovation processes, public debates, or political decision-making.

Workload

The workload is made up of the number of hours of the individual modules:

- Basic Module approx. 120 hours
- Advanced Module approx. 360 hours

> Total: approx. 480 hours

In the form of supplementary services, up to approximately 360 hours of work can be added.

Recommendations

It is recommended to complete the supplementary study program in three or more semesters, beginning with the lecture series on science, technology, and society in the summer semester. Alternatively, you can start with the basic seminar in the winter semester and then attend the lecture series in the summer semester.

Courses in the Advanced Module can be taken simultaneously. It is also advised to complete courses from each of the three subject areas in the advanced unit.

Teaching and Learning Methods

- Lectures
- Seminars/Project Seminars
- Workshops

M 5.148 Module: Thermal Process Engineering II [M-CIWVT-107039]

Coordinators: Prof. Dr.-Ing. Tim Zeiner
Organisation: KIT Department of Chemical and Process Engineering
Part of: Advanced Fundamentals (CIW) (Usage from 4/1/2025)
Technical Supplement Course (Usage from 4/1/2025)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German	4	1

Mandatory			
T-CIWVT-114107	Thermal Process Engineering II	6 CP	Zeiner

Assessment
Leaning control is a written examination lasting 180 minutes.

Prerequisites
None

Competence Goal
Students are able to independently evaluate and model processes for separating mixtures of substances. They can also optimize these unit operations for specific separations.

Content
The lecture covers the extension of basic thermal operations. Drying, membrane processes, and chromatography as separation methods are introduced. In addition, the rectification of real systems and multi-component rectification are considered. Furthermore, crystallization is explored in greater depth. Another focus is on process intensification and synthesis in order to make processes more efficient and resource-friendly. Finally, possibilities for process simulation are presented.

Module Grade Calculation
The module grade ist the grade of the written exam.

Workload

- Lectures and exercises: 45 hrs
- Homework: 90 hrs
- Exam preparation: 45 hrs

5.149 Module: Thermal Process Engineering III [M-CIWVT-107040]

Coordinators: Prof. Dr.-Ing. Tim Zeiner
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 10/1/2025)
Specialized Course I / Thermal Process Engineering (Usage from 10/1/2025)
Specialized Course I / Modelling and Simulation

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	5	1

Mandatory			
T-CIWVT-114108	Thermal Process Engineering III	6 CP	Zeiner

Assessment
Learning control is an examination of another type: The students independently carry out a simulation project of a thermal separation process in a commercial process simulator.

Prerequisites
The contents of the module Thermal Process Engineering II are a prerequisite.

Module Grade Calculation
The module grade is the grade of the examination of another type.

Workload

- Attendance time: 60 hrs
- Homework: 60 hrs
- Exam preparation: 60 hrs

Recommendations
Thermodynamics III

M 5.150 Module: Thermodynamics III [M-CIWVT-103058]

Coordinators: Prof. Dr. Sabine Enders
Organisation: KIT Department of Chemical and Process Engineering
Part of: Advanced Fundamentals (CIW)
Technical Supplement Course

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-106033	Thermodynamics III	6 CP	Enders

Assessment
Learning control is a written examination lasting 90 minutes.

Prerequisites
None

Competence Goal
Students are familiar with the basic principles for the description of complex, multicomponent mixtures and thermodynamic equilibria including equilibria with chemical reactions. They are able to select suitable models and to calculate the properties of multicomponent real systems.

Content
Phase- and reaction equilibria of real systems, equations of state for real mixtures, models for activity coefficients, polymer solutions, protein solutions, elektrolyte solutions.

Module Grade Calculation
The module grade is the grade of the written exam.

Workload

- Attendance time (Lecture): 60 h
- Homework: 90 h
- Exam Preparation: 30 h

Literature

M 5.151 Module: Thermodynamics of Interfaces [M-CIWVT-103063]

Coordinators: Prof. Dr. Sabine Enders
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Technical Thermodynamics

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each summer term	1 term	German/English	4	2

Mandatory			
T-CIWVT-106100	Thermodynamics of Interfaces	6 CP	Enders

Assessment
Learning control is an oral examination lasting approx. 30 minutes.

Prerequisites
None

Competence Goal
The students to be familiar with the peculiarities on fluid-fluid and fluid-solid interfacial properties. They are able to calculate interfacial properties (interfacial tension, density - and concentration profils, adsorption isotherms) using macroscopic and local-dependent methods.

Content
Gibbs-method, density functional theory, experimental methods for characterization of interfaces, adsorption

Module Grade Calculation
The module grade is the grade of the oral exam.

Additional Information
If required, the course will be offered in English.

Workload

- Lectures and exercises: 45 h
- Homework: 90 h
- Exam preparation: 45 h

M 5.152 Module: Vacuum Technology [M-CIWVT-104478]

Coordinators: Dr.-Ing. Thomas Giegerich
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Technical Thermodynamics

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	German	4	1

Mandatory			
T-CIWVT-109154	Vacuum Technology	6 CP	Giegerich

Assessment
The examination is an oral examination with a duration of 20 about minutes (section 4 subsection 2 number 2 SPO).

The grade of the oral examination is the module grade.

Prerequisites
None

Competence Goal
Students will be able to explain basic physical relationships in vacuum science. Building on this, they can design a complex vacuum system correctly and in accordance with specifications.

Content
Basics; vacuum pumps; practical vacuum limits; outgassing and its minimization; cleanliness requirements; vacuum instrumentation; total pressure measurement; residual gas analysis; leak detection; rarefied gas flow; design of vacuum systems; technical specifications; quality in vacuum; examples for large vacuum systems; industrial applications in the process industry.

Module Grade Calculation
The grade of the oral examination is the module grade.

Workload

- Attendance time (Lecture): 60 h
- Homework: 80 h
- Exam Preparation: 40 h

Teaching and Learning Methods
22033 – Übung zu Vakuumtechnik

22034 – Vakuumtechnik

Literature

5.153 Module: Wastewater Treatment Technologies [M-BGU-104917]

Coordinators: Dr.-Ing. Mohammad Ebrahim Azari Najaf Abad
PD Dr.-Ing. Stephan Fuchs

Organisation: KIT Department of Civil Engineering, Geo and Environmental Sciences

Part of: Technical Supplement Course (Usage from 10/1/2022)

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	4	4

Mandatory			
T-BGU-109948	Wastewater Treatment Technologies	6 CP	Azari Najaf Abad, Fuchs

Assessment
- module component T-BGU-109948 with written examination according to § 4 Par. 2 No. 1

details about the learning control, see module component

Prerequisites
none

Competence Goal
Students acquire knowledge about typical techniques and facilities in wastewater treatment at local and international level. They are able to perform a technical evaluation and describe dimensioning approaches taking into consideration legal boundary conditions. Students analyze, evaluate and optimize operation of plant technologies. They focus on energy-efficient plant designs considering the most relevant factors affecting the total costs.Students can analyze the situation in emerging and developing countries making a comparison with that in industrialized countries. Based on that, they are able to develop water-related management strategies.

Content
Students gain deep knowledge about design and operation of typical process technologies in municipal wastewater treatment in Germany and abroad. They analyze, evaluate the applied technologies and take decisions when new and more holistic oriented methods can be implemented. Different mechanical, biological and chemical treatment technologies are considered, whereby the treatment of waste water from housholds and industry as well as the treatment of rainwater is discussed. The visit of at least one municipal wastewater treatment plant in Germany completes the course. The course includes lab work in groups to learn about basic measuring and analytical procedures in wastewater treatment plants.

Module Grade Calculation
grade of the module is grade of the exam

Additional Information
The number of participants in the course is limited to 30 persons. The registration is to be made via ILIAS. The places are allocated considering the progress in the students' studies, with priority to students from *Water Science and Engineering*, then *Civil Engineering, Chemical and Process Engineering, Geoecology* and further study programs.

Workload
contact hours (1 HpW = 1 h x 15 weeks):

- lecture/exercise: 60 h

independent study:

- preparation and follow-up lecture/exercises: 60 h
- examination preparation: 60 h

total: 180 h

Recommendations
module 'Urban Water Infrastructure and Management'

M 5.154 Module: Water – Energy – Environment Nexus in a Circular Economy: Research Proposal Preparation [M-CIWVT-106680]

Coordinators: Prof. Dr. Andrea Iris Schäfer
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course (Usage from 4/1/2024)

Credits	Grading	Recurrence	Duration	Language	Level	Version
5 CP	graded	Each summer term	1 term	English	5	1

Mandatory			
T-CIWVT-113433	Water – Energy – Environment Nexus in a Circular Economy: Research Proposal Preparation	5 CP	

Assessment
The Learning control is an examination of another type:
Research proposal of 10 pages and an oral presentation of 10 minutes (individual work). The grade will be a composite of the proposal (submission in week 13 before class) and oral & poster presentation (all day workshop with researcher participation).

Competence Goal
The goal of this course is to get an overview of current challenges in the circular economy focused on the water – energy – environment nexus. Based on individual student interest a topic will be identified and a research plan developed encompassing a thorough background research to establish the state-of-the-art, identification of a specific research problem and research questions suitable to solve this problem. Concepts of novelty and excellence will be explored in an international context. Following the individual topic choice, the research proposal will be developed individually in a tutor group (divided into water, energy, environment) while lectures on required skills will accompany this process. As an outlook beyond this course, criteria to consider when looking for research careers such as applying for funding/scholarships, considering choices in research environment and supervision, performance indicators in research and university rankings will be introduced to enable informed decisions. The proposal will be communicated in writing, as a brief presentation and as a poster, which equips students brilliantly not only for a masters thesis but also a future research publication or a PhD.

Content
In a time of limiting resources, climate change and ever increasing demand for resources the concept of a circular economy is inevitable to create a more sustainable utilization of our key resources, water, energy and 'environment'. Concepts of zero liquid discharge, water reuse, carbon net zero, resource recovery and environmental pollution reduction are all part of this concept where where waste is returned to use. The water – energy – environment nexus is the particular focus of ths course. Global water issues, water and wastewater treatment, desalination, water reuse, micropollutants, decentralized systems, water & sanitation in international development, renewable energies, environmental pollution, climate change, resource recovery – and many more topics will inspire future research.

Module Grade Calculation
The module grade is the grade of the examination of another type.

Workload

- Contact time: lectures and tutorials 60 hrs (4 SWS)
- Group and self study: 50 hrs
- Preparation of assessments and participation at the group presentations (one full day): 30 hrs

5.155 Module: Water Technology [M-CIWVT-103407]

Coordinators: Prof. Dr. Harald Horn
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Water Technology
Specialized Course I / Environmental Process Engineering

Credits	Grading	Recurrence	Duration	Language	Level	Version
6 CP	graded	Each winter term	1 term	English	4	1

Mandatory			
T-CIWVT-106802	Water Technology	6 CP	Horn

Assessment
Oral exam, 30 min

Prerequisites
None

Competence Goal
Students learn fundamental knowledge in water chemistry and how to apply it to processes in aquatic systems in general and in reactors for water treatment. Water treatment will be taught for drinking water and partly waste water. The students are able to apply physical, chemical and biochemical treatment for the respective removal of particulate and dissolved components in water. They are able to use the fundamental design parameters for the different types of unit operations.

Content
Water cycle, different types of raw water (ground and surface water). Water as solvent, carbonate balance, differentiation between microbiological and chemical population. Unit operations: sieving, sedimentation, filtration, flocculation, flotation, ion exchange, aeration, oxidation, disinfection, adsorption). For all unit operations design parameters will be provided. Simple 1D models will be discussed for description of kinetics and retention time in reactors for water treatment.

Workload
Attendance time: 45 h
Preparation/follow-up: 60 h
Examination + exam preparation: 75 h

Literature
Crittenden, J. C. et al. (2012): Water treatment – Principles and design. 3. edition, Wiley & Sons, Hoboken.

T 6.7 Module component: Basic Seminar Supplementary Studies on Science, Technology and Society - Self Registration [T-FORUM-113579]

Coordinators: Dr. Christine Mielke
Christine Myglas

Organisation: General Studies. Forum Science and Society (FORUM)

Part of: M-FORUM-106753 - Supplementary Studies on Science, Technology and Society

Type	Credits	Grading	Term offered	Expansion	Version
Coursework	2 CP	pass/fail	Each summer term	1 semesters	1

Assessment

Study achievement in the form of a presentation or a term paper or project work in the selected course.

Prerequisites

None

Self Service Assignment of Supplementary Studies

This module component can be used for self service assignment of grades acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendations

It is recommended that the basic seminar be completed during the same semester as the lecture series "Science in Society". If it is not possible to attend the lecture series and the basic seminar in the same semester, the basic seminar can also be attended in the semesters before the lecture series.

However, attending courses in the advanced unit before attending the basic seminar should be avoided.

T 6.8 Module component: Batteries, Fuel Cells, and Electrolysis [T-ETIT-113986]

Coordinators: Prof. Dr.-Ing. Ulrike Krewer
Organisation: KIT Department of Electrical Engineering and Information Technology
Part of: M-ETIT-107005 - Batteries, Fuel Cells, and Electrolysis

ST 2026	7304240	Batteries, Fuel Cells, and Electrolysis			Krewer

Legend: Online, Blended (On-Site/Online), On-Site, × Cancelled

Assessment
Success control takes place in the form of a graded written examination lasting 120 minutes.

Prerequisites
The following module components **must not** have started:

- T-ETIT-100983 - Batterien und Brennstoffzellen
- T-ETIT-114097 - Batterien, Brennstoffzellen und ihre Systeme

The following module components **must** have started:

- T-ETIT-114957 - Batteries, Fuel Cells, and Electrolysis - Group Project

Modeled Prerequisites
The following conditions have to be fulfilled:

1. The module component T-ETIT-100983 - Batteries and Fuel Cells must not have been started.
2. The module component T-ETIT-114957 - Batteries, Fuel Cells, and Electrolysis - Group Project must have been started.

Additional Information
For details on content and qualification objectives see "M-ETIT-107005 - Batteries, Fuel Cells, and Electrolysis".

The course is offered in English.

Workload
150 hours

T 6.9 Module component: Batteries, Fuel Cells, and Electrolysis - Group Project [T-ETIT-114957]

Coordinators: Prof. Dr.-Ing. Ulrike Krewer
Organisation: KIT Department of Electrical Engineering and Information Technology
KIT Department of Mechanical Engineering
Part of: M-ETIT-107005 - Batteries, Fuel Cells, and Electrolysis

Type	Credits	Grading	Term offered	Version
Coursework	1 CP	pass/fail	Each winter term	1

Assessment
Success control takes place in the form of an ungraded written technical report (approx. 7-10 pages).

Prerequisites
none

Additional Information
For details on content and qualification objectives see "M-ETIT-107005 - Batteries, Fuel Cells, and Electrolysis".

The course is offered in English.

Workload
30 hours

T 6.10 Module component: Battery and Fuel Cell Systems [T-ETIT-114802]

Coordinators: Dr.-Ing. Andre Weber
Organisation: KIT Department of Electrical Engineering and Information Technology
Part of: M-ETIT-107551 - Battery and Fuel Cell Systems

Type	Credits	Grading	Term offered	Version
Oral examination	3 CP	graded	Each summer term	1

Assessment
Learning control is an examination of another type:
Written elaboration on a task that is handed out in the lecture.

Prerequisites
None

T 6.54 Module component: Elective Specialization Supplementary Studies on Science, Technology and Society / About Knowledge and Science - Self-Registration [T-FORUM-113580]

Coordinators:	Dr. Christine Mielke Christine Myglas
Organisation:	General Studies. Forum Science and Society (FORUM)
Part of:	M-FORUM-106753 - Supplementary Studies on Science, Technology and Society

Type	Credits	Grading	Term offered	Version
Examination of another type	3 CP	graded	Each term	1

Assessment
Another type of examination assessment under § 5, section 3 involves a presentation, term paper, or project work within the chosen course.

Prerequisites
None

Self Service Assignment of Supplementary Studies
This module component can be used for self service assignment of grades acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendations
The contents of the basic module are helpful. The basic module should be completed or attended in parallel, but not after the advanced module.
The reading recommendations for primary and specialist literature are determined individually by the respective lecturers according to the subject area and course.

Additional Information
This placeholder can be used for any achievement in the Advanced Unit of the Supplementary Studies.

In the Advanced Module, students can choose their own individual focus, e.g. sustainable development, data literacy, etc. The focus should be discussed with the module coordinator at the FORUM.

T 6.55 Module component: Elective Specialization Supplementary Studies on Science, Technology and Society / Science in Public Debates - Self Registration [T-FORUM-113582]

Coordinators: Dr. Christine Mielke
Christine Myglas

Organisation: General Studies. Forum Science and Society (FORUM)

Part of: M-FORUM-106753 - Supplementary Studies on Science, Technology and Society

Assessment
The assessment consists of a written exam (60 minutes) (following §4(2), 1 of the examination regulation).

Students are offered the opportunity to earn a grade bonus through separate assignments. If the grade of the written exam is between 4.0 and 1.3, the bonus improves the grade by a maximum of one grade level (0.3 or 0.4). The exact criteria for awarding a bonus will be announced at the beginning of the lecture.

Legend: Online, Blended (On-Site/Online), On-Site, Cancelled

Assessment
The learning control is an oral examination lasting approx. 20 minutes.

Prerequisites
None

Workload
120 hours

T 6.97 Module component: Internship [T-CIWVT-109276]

Coordinators: Dr.-Ing. Siegfried Bajohr
Dr.-Ing. Barbara Freudig

Organisation: KIT Department of Chemical and Process Engineering

Part of: M-CIWVT-104527 - Internship

Type	Credits	Grading	Term offered	Version
Coursework (practical)	14 CP	pass/fail	Each term	1

Exams			
WT 25/26	7200000	Internship	Bajohr
ST 2026	7200000	Internship	Bajohr

Prerequisites
None

T 6.98 Module component: Introduction to Numerical Simulation of Reacting Flows [T-CIWVT-113436]

Coordinators: Prof. Dr. Oliver Thomas Stein
Organisation: KIT Department of Chemical and Process Engineering
Part of: M-CIWVT-106676 - Introduction to Numerical Simulation of Reacting Flows

Type	Credits	Grading	Version
Oral examination	3 CP	graded	2

Courses					
WT 25/26	2232130	Introduction to Numerical Simulation of Reacting Flows	2 SWS	Lecture / 🗣	Stein
WT 25/26	2232131	Introduction to Numerical Simulation of Reacting Flows - Exercises	2 SWS	Practice / 🗣	Stein
Exams					
WT 25/26	7232130	Introduction to Numerical Simulation of Reacting Flows			Stein

Legend: 🖥 Online, ⚙ Blended (On-Site/Online), 🗣 On-Site, ✕ Cancelled

Assessment
The learning control ist an oral examination lasting approx. 30 minutes.

Prerequisites
The prerequisite must be passed before taking the oral examination.

Modeled Prerequisites
The following conditions have to be fulfilled:

1. The module component T-CIWVT-113435 - Introduction to Numerical Simulation of Reacting Flows - Prerequisite must have been passed.

T 6.99 Module component: Introduction to Numerical Simulation of Reacting Flows - Prerequisite [T-CIWVT-113435]

Coordinators: Prof. Dr. Oliver Thomas Stein
Organisation: KIT Department of Chemical and Process Engineering
Part of: M-CIWVT-106676 - Introduction to Numerical Simulation of Reacting Flows

Type	Credits	Grading	Version
Coursework	5 CP	pass/fail	2

Courses					
WT 25/26	2232130	Introduction to Numerical Simulation of Reacting Flows	2 SWS	Lecture / 🗣	Stein
WT 25/26	2232131	Introduction to Numerical Simulation of Reacting Flows - Exercises	2 SWS	Practice / 🗣	Stein
Exams					
WT 25/26	7232131	Introduction to Numerical Simulation of Reacting Flows - Prerequisite			Stein

Legend: 🖥 Online, ⚙ Blended (On-Site/Online), 🗣 On-Site, ✕ Cancelled

Assessment
The learning control is a completed coursework: Reports on the tutorials documenting the processed task, the data generated and their analysis.

Prerequisites
None

T 6.100 Module component: Introduction to Sensory Analysis with Practice [T-CIWVT-109128]

Coordinators: Prof. Dr. Mirko Bunzel
Organisation: KIT Department of Chemical and Process Engineering
Part of: M-CIWVT-105933 - Introduction to Sensory Analysis

Type	Credits	Grading	Term offered	Version
Examination of another type	2 CP	graded	Each summer term	1

Assessment
Learning control is an ungraded lab-course.

Prerequisites
None

6.103 Module component: Lecture Series Supplementary Studies on Science, Technology and Society - Self Registration [T-FORUM-113578]

Coordinators: Dr. Christine Mielke
Christine Myglas
Organisation: General Studies. Forum Science and Society (FORUM)
Part of: M-FORUM-106753 - Supplementary Studies on Science, Technology and Society

Type	Credits	Grading	Term offered	Expansion	Version
Coursework	2 CP	pass/fail	Each summer term	1 semesters	1

Courses					
ST 2026	1130716	Lecture series Science in Society	2 SWS	Lecture / 🗣	Post, Mielke

Legend: 🖥 Online, 🧩 Blended (On-Site/Online), 🗣 On-Site, ✕ Cancelled

Assessment
Active participation, learning protocols, if applicable.

Prerequisites
None

Self Service Assignment of Supplementary Studies
This module component can be used for self service assignment of grades acquired from the following study providers:

- Studium Generale. Forum Wissenschaft und Gesellschaft (FORUM) (ehem. ZAK)
- FORUM (ehem. ZAK) Begleitstudium

Recommendations
It is recommended that you complete the lecture series "Science in Society" before attending events in the advanced module and in parallel with attending the basic seminar.
If it is not possible to attend the lecture series and the basic seminar in the same semester, the lecture series can also be attended after attending the basic seminar.
However, attending events in the advanced module before attending the lecture series should be avoided.

Additional Information
The basic module consists of the lecture series "Science in Society" and the basic seminar. The lecture series is only offered during the summer semester.
The basic seminar can be attended in the summer or winter semester.

T 6.104 Module component: Liquid Transportation Fuels [T-CIWVT-111095]

Coordinators: Prof. Dr. Reinhard Rauch
Organisation: KIT Department of Chemical and Process Engineering
Part of: M-CIWVT-105200 - Liquid Transportation Fuels

Type	Credits	Grading	Term offered	Version
Oral examination	6 CP	graded	Each winter term	1

Courses					
WT 25/26	2231130	Liquid Transportation Fuels	2 SWS	Lecture / 🗣	Rauch

Legend: 🖥 Online, 🧩 Blended (On-Site/Online), 🗣 On-Site, ✕ Cancelled

Assessment
The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO).

Prerequisites
None

T 6.106 Module component: Master's Thesis [T-CIWVT-109275]

Coordinators: Prof. Dr. Reinhard Rauch
Organisation: KIT Department of Chemical and Process Engineering
Part of: M-CIWVT-104526 - Master's Thesis

Type	Credits	Grading	Term offered	Version
Final Thesis	30 CP	graded	Each term	2

Prerequisites
Process Technology and at least three further modules of the advanced fundamentals has to be passed. The intership has to be passed. The examination board decides on exceptions.

(Compare SPO section 14 subsection 1)

Final Thesis
This module component represents a final thesis. The following periods have been supplied:

Submission deadline	6 months
Maximum extension period	4 weeks
Correction period	8 weeks

This thesis requires confirmation by the examination office.

T 6.107 Module component: Materials and Processes for Electrochemical Storage [T-CIWVT-108146]

Coordinators: Prof. Dr. Jens Tübke
Organisation: KIT Department of Chemical and Process Engineering
Part of: M-CIWVT-104353 - Materials and Processes for Electrochemical Storage

Type	Credits	Grading	Term offered	Version
Oral examination	4 CP	graded	Each term	1

Coordinators: Prof. Dr. Oliver Thomas Stein
Organisation: KIT Department of Chemical and Process Engineering
Part of: M-CIWVT-107076 - Numerical Simulation of Reacting Multiphase Flows

Type	Credits	Grading	Version
Oral examination	3 CP	graded	1

Courses					
ST 2026	2232120	Numerical Simulation of Reacting Multiphase Flows	2 SWS	Lecture / 🗣	Stein
ST 2026	2232121	Numerical Simulation of Reacting Multiphase Flows - Exercises	2 SWS	Practice / 🗣	Stein, und Mitarbeitende
Exams					
WT 25/26	7232121	Numerical Simulation of Reacting Multiphase Flows			Stein
ST 2026	7232121	Numerical Simulation of Reacting Multiphase Flows			Stein

Legend: 🖥 Online, ⚙ Blended (On-Site/Online), 🗣 On-Site, ✕ Cancelled

Assessment
The learning control ist an oral examination lasting approx. 30 minutes.

Prerequisites
The prerequisite must be passed before taking the oral examination.

Modeled Prerequisites
The following conditions have to be fulfilled:

1. The module component T-CIWVT-114117 - Numerical Simulation of Reacting Multiphase Flows - Prerequisite must have been passed.

T 6.126 Module component: Numerical Simulation of Reacting Multiphase Flows - Prerequisite [T-CIWVT-114117]

Coordinators: Prof. Dr. Oliver Thomas Stein
Organisation: KIT Department of Chemical and Process Engineering
Part of: M-CIWVT-107076 - Numerical Simulation of Reacting Multiphase Flows

Type	Credits	Grading	Version
Coursework	5 CP	pass/fail	1

Courses					
ST 2026	2232120	Numerical Simulation of Reacting Multiphase Flows	2 SWS	Lecture / 🗣	Stein
ST 2026	2232121	Numerical Simulation of Reacting Multiphase Flows - Exercises	2 SWS	Practice / 🗣	Stein, und Mitarbeitende
Exams					
ST 2026	7232120	Numerical Simulation of Reacting Multiphase Flows - Prerequisite			Stein

Legend: 🖥 Online, 🧩 Blended (On-Site/Online), 🗣 On-Site, × Cancelled

Assessment
The learning control is a completed coursework: Reports on the tutorials documenting the processed task, the data generated and their analysis.

Prerequisites
None

T 6.127 Module component: Optimal and Model Predictive Control [T-CIWVT-112825]

Coordinators: Prof. Dr.-Ing. Thomas Meurer
Organisation: KIT Department of Chemical and Process Engineering
Part of: M-CIWVT-106317 - Optimal and Model Predictive Control

Type	Credits	Grading	Version
Oral examination	6 CP	graded	1
