## Table Of Contents

1. General information ............................................................................................................................................................................ 8

2. Qualification Profile .................................................................................................................................................................................. 13

3. 3 English Modules/Lectures ........................................................................................................................................................................ 14

4. Field of study structure ................................................................................................................................................................................ 15

   4.1. Master Thesis ..................................................................................................................................................................................... 15
   4.2. Advanced Fundamentals ................................................................................................................................................................. 15
   4.3. Technical Supplement Course ......................................................................................................................................................... 16
   4.4. Specialized Course I .......................................................................................................................................................................... 20
   4.4.1. Applied Rheology ..................................................................................................................................................................... 20
   4.4.2. Gas Particle Systems ................................................................................................................................................................. 21
   4.4.3. Mechanical Process Engineering ................................................................................................................................................ 21
   4.4.4. Environmental Process Engineering ........................................................................................................................................ 22
   4.4.5. Thermal Process Engineering ..................................................................................................................................................... 22
   4.4.6. Product Design ............................................................................................................................................................................ 23
   4.4.7. Chemical Process Engineering .................................................................................................................................................. 23
   4.4.8. Fuel Technology ........................................................................................................................................................................ 24
   4.4.9. Technical Thermodynamics ....................................................................................................................................................... 24
   4.4.10. Food Process Engineering ....................................................................................................................................................... 25
   4.4.11. Water Technology ..................................................................................................................................................................... 25
   4.4.12. Combustion Technology .......................................................................................................................................................... 26
   4.4.13. Technical Biology .................................................................................................................................................................... 26
   4.4.15. Biopharmaceutical Process Engineering ................................................................................................................................... 27
   4.4.16. Bioresource Engineering ........................................................................................................................................................... 28
   4.4.17. Energy and Combustion Technology ........................................................................................................................................ 28
   4.5. Internship ......................................................................................................................................................................................... 28

5. Modules ................................................................................................................................................................................................. 29

   5.1. Additive Manufacturing for Process Engineering - M-CIWVT-105407 ...................................................................................... 29
   5.2. Applied Combustion Technology - M-CIWVT-105201 .......................................................................................................................... 30
   5.3. Applied Combustion Technology - M-CIWVT-104299 ....................................................................................................................... 31
   5.4. Applied Data Analysis and Statistics - M-CIWVT-105660 .................................................................................................................... 32
   5.5. Applied Molecular Thermodynamics - M-CIWVT-104361 .................................................................................................................. 33
   5.6. Biobased Plastics - M-CIWVT-104570 ............................................................................................................................................... 34
   5.7. Bioelectrochemistry and Biosensors - M-CIWVT-104268 .................................................................................................................... 35
   5.8. Biofilm Systems - M-CIWVT-103441 ................................................................................................................................................. 36
   5.9. Biomass Based Energy Carriers - M-CIWVT-104288 .......................................................................................................................... 37
   5.10. BioMEMS - Microsystems Technologies for Life Sciences and Medicine I - M-MACH-100489 ................................................. 38
   5.11. BioMEMS - Microsystems Technologies for Life Sciences and Medicine II - M-MACH-100490 .................................................... 39
   5.13. Biomimetic Interfaces and Bioconjugation - M-CIWVT-104272 ................................................................................................. 41
   5.15. Bioprocess Development - M-CIWVT-104347 ................................................................................................................................. 43
   5.16. Biotechnological Production - M-CIWVT-104384 ............................................................................................................................... 44
   5.17. Biotechnological Use of Renewable Resources - M-CIWVT-105295 ........................................................................................ 45
   5.18. Biotechnology in Bioeconomy - M-CIWVT-104399 ............................................................................................................................ 46
   5.19. Catalytic Micro Reactors - M-CIWVT-104451 ................................................................................................................................. 47
   5.20. Catalytic Micro Reactors (including practical course) - M-CIWVT-104491 ............................................................................... 48
   5.21. Catalytic Processes in Gas Technologies - M-CIWVT-104287 ....................................................................................................... 49
   5.22. Chemical Process Engineering II - M-CIWVT-104281 .................................................................................................................... 50
   5.23. Chem-Plant - M-CIWVT-104461 ................................................................................................................................................. 51
   5.24. Combustion and Environment - M-CIWVT-104295 .......................................................................................................................... 52
   5.25. Combustion Technology - M-CIWVT-103069 ................................................................................................................................. 53
   5.27. Computational Fluid Dynamics - M-CIWVT-103072 ....................................................................................................................... 55
   5.29. Cryogenic Engineering - M-CIWVT-104356 ................................................................................................................................. 57
   5.30. Data Analysis and Statistics - M-CIWVT-104345 ............................................................................................................................ 58

Chemical and Process Engineering Master 2016 (Master of Science (M.Sc.))
Module Handbook as of 18/03/2021
5.31. Design of a Jet Engine Combustion Chamber - M-CIWVT-105206 ................................................................. 59
5.32. Design of Micro Reactors - M-CIWVT-104286 ................................................................................................. 60
5.33. Development of an Innovative Food Product - M-CIWVT-104388 ................................................................. 61
5.34. Digitization in Particle Technology - M-CIWVT-104973 .............................................................................. 62
5.35. Dimensional Analysis of Fluid Mechanic Problems - M-CIWVT-104327 ....................................................... 63
5.36. Drying Technology - M-CIWVT-104370 ........................................................................................................ 64
5.38. Energy and Environment - M-CIWVT-104453 ................................................................................................. 66
5.39. Energy from Biomass - M-CIWVT-105207 ....................................................................................................... 68
5.40. Energy Technology - M-CIWVT-104293 ........................................................................................................ 69
5.41. Environmental Biotechnology - M-CIWVT-104320 ......................................................................................... 70
5.42. Flow and Combustion Instabilities in Technical Burner Systems - M-CIWVT-104294 .................................. 71
5.43. Fluid Mechanics of Non Newtonian Fluids - M-CIWVT-104322 ............................................................... 72
5.44. Fluidized Bed Technology - M-CIWVT-104292 ............................................................................................... 73
5.45. Food Chemistry Basics - M-CHEMBIO-104620 ............................................................................................. 74
5.46. Food Science and Functionality - M-CIWVT-104263 .................................................................................... 75
5.47. Formulation of (Bio)pharmaceutical Therapeutics - M-CIWVT-104266 .................................................... 76
5.48. Formulation Processes for Life Sciences - M-CIWVT-104402 ................................................................. 77
5.49. Fuel Technology - M-CIWVT-104289 ........................................................................................................... 79
5.50. Fundamentals of Motoric Exhaust Aftertreatment - M-CIWVT-104338 ...................................................... 80
5.51. Fungal Biotechnology - M-CIWVT-104398 ...................................................................................................... 81
5.52. Gas Particle Measurement Technology - M-CIWVT-104337 ...................................................................... 82
5.53. Gas Particle Separation Processes - M-CIWVT-104340 ............................................................................. 83
5.54. Heat Exchangers - M-CIWVT-104371 .......................................................................................................... 84
5.55. Heat Transfer II - M-CIWVT-103051 ............................................................................................................. 85
5.56. Heterogeneous Catalysis II - M-CIWVT-104280 ......................................................................................... 86
5.57. High Temperature Process Engineering - M-CIWVT-105202 .................................................................... 87
5.58. High Temperature Process Engineering - M-CIWVT-103075 .................................................................... 88
5.60. Industrial Aspects in Bioprocess Technology - M-CIWVT-105412 ........................................................... 91
5.61. Industrial Biocatalysis - M-CIWVT-104275 ................................................................................................. 92
5.62. Industrial Crystallization - M-CIWVT-104364 .............................................................................................. 93
5.63. Industrial Genetics - M-CIWVT-104274 ....................................................................................................... 94
5.64. Innovation Management for Products & Processes in the Chemical Industry - M-CIWVT-104397 .............. 95
5.65. Instrumental Analytics - M-CIWVT-104360 .................................................................................................. 97
5.66. Integrated Bioprocesses - M-CIWVT-104386 ................................................................................................. 98
5.67. Internship - M-CIWVT-104527 .................................................................................................................... 99
5.68. Kinetics and Catalysis - M-CIWVT-104383 .................................................................................................... 100
5.69. Liquid Transportation Fuels - M-CIWVT-105200 ....................................................................................... 101
5.70. Mass Transfer II - M-CIWVT-104369 ............................................................................................................ 102
5.71. Materials and Processes for Electrochemical Storage - M-CIWVT-104353 .............................................. 103
5.72. Measurement Techniques in Chemical Processing - M-CIWVT-104490 .................................................... 104
5.73. Measurement Techniques in Chemical Processing (including practical course) - M-CIWVT-104450 ....... 105
5.74. Measurement Techniques in the Thermo-Fluid Dynamics - M-CIWVT-104297 ............................................. 106
5.75. Membrane Reactors - M-CIWVT-105663 ..................................................................................................... 107
5.76. Membrane Technologies in Water Treatment - M-CIWVT-105380 ......................................................... 108
5.77. Microbiology for Engineers - M-CIWVT-104319 ........................................................................................ 109
5.78. Microfluidics - M-CIWVT-104350 ............................................................................................................. 110
5.79. Microfluidics and Case Studies - M-CIWVT-105205 ................................................................................. 111
5.81. Microarchitecture and High Frequency Rheology - M-CIWVT-104395 .................................................... 113
5.82. Mixing, Stirring, Agglomeration - M-CIWVT-105399 .............................................................................. 114
5.83. Modern Analysis Techniques for Process Optimization - M-CIWVT-104387 ........................................ 115
5.84. Module Master Thesis - M-CIWVT-104526 ............................................................................................... 116
5.85. Multiphase Reaction Engineering - M-CIWVT-104277 ............................................................................ 117
5.86. Nanoparticles – Structure and Function - M-CIWVT-104339 ................................................................. 118
5.87. NMR for Engineers - M-CIWVT-104401 .................................................................................................... 119
5.88. Numerical Methods in Fluid Mechanics - M-MATH-102932 ................................................................. 120
5.89. Nutritional Consequences of Food Processing - M-CIWVT-104255 ....................................................... 121
5.90. Organ Support Systems - M-MACH-102702 .............................................................................................. 122

## Table Of Contents

6.7. Bioelectrochemistry and Biosensors - T-CIWVT-108807 .................................. 187
6.8. Biofilm Systems - T-CIWVT-106841 ................................................................. 188
6.9. BioMEMS - Microsystems Technologies for Life-Sciences and Medicine I - T-MACH-100966 ................................................................. 189
6.10. BioMEMS - Microsystems Technologies for Life-Sciences and Medicine II - T-MACH-100967 ................................................................. 190
6.11. BioMEMS - Microsystems Technologies for Life-Sciences and Medicine III - T-MACH-100968 ................................................................. 191
6.12. Biomimetic Interfaces and Bioconjugation - T-CIWVT-108810 ....................... 192
6.15. Biotechnological Production - T-CIWVT-106030 ............................................. 195
6.16. Biotechnology in Bioeconomy - T-CIWVT-108982 ........................................ 196
6.17. Biotechnology in Bioeconomy -Seminar - T-CIWVT-110770 ......................... 197
6.18. Catalytic Micro Reactors - T-CIWVT-109087 ................................................ 198
6.21. Chem-Plant - T-CIWVT-109127 .................................................................. 201
6.22. Combustion and Environment - T-CIWVT-108835 ......................................... 202
6.23. Combustion Technology - T-CIWVT-106104 ................................................ 203
6.24. Commercial Biotechnology - T-CIWVT-108811 ............................................. 204
6.25. Computational Fluid Dynamics - T-CIWVT-106035 ....................................... 205
6.27. Cryogenic Engineering - T-CIWVT-108915 .................................................. 207
6.30. Design of Micro Reactors - T-CIWVT-108826 .............................................. 210
6.32. Development of an Innovative Food Product - presentation - T-CIWVT-111010 ................................................................. 212
6.33. Digitization in Particle Technology - T-CIWVT-110111 ................................ 213
6.34. Dimensional Analysis of Fluid Mechanic Problems - T-CIWVT-108882 ........... 214
6.35. Drying Technology - T-CIWVT-108936 ...................................................... 215
6.38. Energy and Environment - T-CIWVT-110917 .............................................. 218
6.40. Energy from Biomass - T-CIWVT-110576 .................................................. 220
6.41. Energy Technology - T-CIWVT-108833 ...................................................... 221
6.42. Environmental Biotechnology - T-CIWVT-106835 ....................................... 222
6.43. Excursions: Membrane Technologies - T-CIWVT-110864 ........................... 223
6.44. Excursions: Water Supply - T-CIWVT-110866 ........................................... 224
6.45. Flow and Combustion Instabilities in Technical Burner Systems - T-CIWVT-108834 ................................................................. 225
6.47. Fluidized Bed Technology - T-CIWVT-108832 ............................................. 227
6.48. Food Chemistry Basics - T-CHEMBIO-109442 ......................................... 228
6.49. Food Science and Functionality - T-CIWVT-108801 ...................................... 229
6.50. Formulation of (Bio)pharmaceutical Therapeutics - T-CIWVT-108805 .......... 230
6.51. Formulation Processes for Life Sciences - T-CIWVT-108985 ....................... 231
6.52. Fuel Technology - T-CIWVT-108829 ...................................................... 232
6.54. Fungal Biotechnology - T-CIWVT-108981 .................................................. 234
6.55. Fungal Biotechnology - Laboratory - T-CIWVT-110355 ............................. 235
6.56. Gas Particle Measurement Technology - T-CIWVT-108892 ......................... 236
6.57. Gas Particle Separation Processes - T-CIWVT-108895 ............................... 237
6.58. Heat Exchangers - T-CIWVT-108937 ...................................................... 238
6.59. Heat Transfer II - T-CIWVT-106067 ........................................................... 239
6.60. Heterogeneous Catalysis II - T-CIWVT-108816 ........................................... 240
6.64. Industrial Aspects in Bioprocess Technology - T-CIWVT-110935 ................... 244
6.65. Industrial Biocatalysis - T-CIWVT-108813 ................................................ 245
6.66. Industrial Crystallization - T-CIWT-108925 ................................................................. 246

## 8. Amendment of the study and examination regulations

................................................................................................................................................................. 339

.................................................................................................................................................................. 356
1 General information

Field of study | Chemical and Process Engineering
---|---
Faculty | KIT Department of Chemical and Process Engineering
Academic degree | Master of Science (B.Sc.)
Exam regulations | Version 2016
Regular term | 4 Semester
Credit points | 120
Language | German
Grade scale | Tenth grades
Calculation scheme | Weighted average by credits

1.1 Contact

Dean of students | Prof. Dr.-Ing. Achim Dittler
Study affairs/ study counseling | Dr.-Ing. Barbara Freudig
Master Examination Board | Prof. Dr. Reinhard Rauch
Examination office | Marion Benoit

Current information on degree programs and dates for information sessions can be found on the faculty web pages.

http://www.ciw.kit.edu/english/studium.php

1.2 Exam Regulations

The legal basis for the study program is the „Studien- und Prüfungsordnung des Karlsruher Instituts für Technologie (KIT) für den Masterstudiengang Chemieingenieurwesen und Verfahrenstechnik“ dated 03 May 2016, amended on 24 February 2020. All references to the SPO in this module manual refer to the above-mentioned SPO.

The statute of 03 May 2016 as well as the amending statute can be found in the appendix of this module manual.

1.3 Corona in summer semester 21

Due to contact restrictions/spacing rules, most courses are offered exclusively or partially online. Please inform yourself in time in the course catalog and in the ILIAS courses for the individual courses. Special regulations, e.g. for deregistration from examinations or Master's preferential credits, can be found on the KIT information pages:

https://www.kit.edu/kit/25911.php
1.4 New in summer semester 21

1.4.1 Changes in the field Advanced Fundamentals

- The module „Membrane Technologies in Water Treatment“ can be selected from this summer semester in the subject “Advanced Fundamentals“
- The module “Integrated Bioprocesses” is no longer offered. Oral exams are still available during this summer semester.

1.4.2 New modules from the summer semester 2021

- Membrane Reactors
  Responsible: Prof. Dr.-Ing. Peter Pfeifer
  Workload: 2 SWS/ 4 Credits
  Component of the Specialized Course Chemical Process Engineering and the Technical Supplement Course

- Seminar Flow Calculation
  Responsible: Dr. Matthias Krause
  Workload: 2 SWS/ 4 Credits
  Component of the Specialized Course Mechanical Process Engineering and the Technical Supplement Course

- Applied Data Analysis and Statistics
  Responsible: Dr.-Ing. Ulrike van der Schaaf
  Workload: 2 SWS/ 4 Credits
  Component of the Technical Supplement Course

1.4.3 Changes to existing modules

- Surface Effects in Process Engineering:
  As of now, the module can only be selected in the Technical Supplement Course
- Hydrogen and Fuel Cell Technologies
  From now, the module can also be selected in the Specialization Course Fuel Technology.
- Membrane Technologies in Water Treatment:
  Learning control in this module will be a written exam beginning this summer semester.
- Formulation Processes for Life Sciences
  Learning control in this module will be a written exam beginning this summer semester.

1.4.4 Expiring modules

- Industrial Biocatalysis, exams possible until February 2022.
- Integrated Bioprocesses, exams possible until September 2021.
### 1.5 Subject and module overview

## 1.6 Recommended course of study

The study program can be started in the summer semester as well as in the winter semester. In the first two semesters it is recommended to complete the modules of the subjects Advanced Fundamentals, Technical Supplement Course and Soft Skill Qualifications as well as to attend lectures in the Specialized Courses. The first half of the third semester is then used to prepare for the specialization examinations, some of which are offered as block examinations (all modules of a specialized course in one common date). Following the specialization examinations, the internship can be completed. The master’s thesis is written in the fourth semester.

### Course Details

- **PAT Teil II**: 3 LP
- **WP I**: 6 LP
- **WP II**: 6 LP
- **TE**: 6 LP
- **VF I**: 4 LP
- **VF II**: 4 LP
- **ÜQ**: 2 LP
- **Prüfungen**: 4
- **Praktikum**: Berufs-Praktikum
- **Masterarbeit**: 30 LP

**Assessments:**
- **Prüfungen benotet**: 4
- **Prüfungen unbenotet**: 1

**Study Modules:**
- **PAT**: Prozess und Anlagentechnik (Erweiterte Grundlagen)
- **WP**: Wahlpflicht (Erweiterte Grundlagen)
- **TE**: Technisches Ergänzungsfach
- **VF**: Vertiefungsfach
- **ÜQ**: Überfachliche Qualifikationen

**Exams:**
- **K**: Klausur
- **M**: Mündliche Prüfung
- **S**: Studienleistung
- **F**: Praktikum
- **P**: Vorbereitung und Abschlussprüfung Vertiefungsfach

**Semester Details:**
- **1. Semester**: April, Mai, Juni, Juli
- **2. Semester**: August, September, Oktober, November
- **3. Semester**: Dezember, Januar, Februar, März
- **4. Semester**: April, Mai, Juni, Juli

Chemical and Process Engineering Master 2016 (Master of Science (M.Sc.))
Module Handbook as of 18/03/2021

11
1.7 Organizational

1.7.1 Recognition of achievements according to § 19 SPO

A request for recognition of services which

- At another university
- Abroad
- Outside the higher education system
- Within the scope of the master transfer account

can be submitted to the Master Examination Board within one semester. There, if necessary after consultation with the subject representative, it will be determined whether the performance is equivalent to a performance envisaged in the curriculum of the course of study and can be recognised. Achievements completed as part of a semester abroad can also be recognized at a later date. If you have already completed a professional internship or practical semester, you can apply for recognition directly at the Internship Office.

1.7.2 Registration for examinations in the specialized courses/ in the technical supplement course

Before registering for module examinations in Specialized Courses subjects as well as in the Technical Supplement Course, a study plan must be submitted to the Master's Examination Board (Marion Benoit) for approval. Only then are the modules added to the study schedule and online registration in the student portal is possible. For more information, see the faculty website at

https://www.ciw.kit.edu/1619.php

Subsequent changes to the study plan must also be requested from Marion Benoit.

1.7.3 additional achievements and interdisciplinary qualification

Additional credits and interdisciplinary qualifications cannot always be registered directly in the CAS system (e.g. some modules from another faculty). In any case, you must contact Marion Benoit before the examination.

Exception: interdisciplinary qualification at the House of Competence (HoC) or Language Centre

If the Soft Skill Qualification is taken at the HoC or Language Centre, then no certificate of approval is required for an examination achievement, as the achievements are automatically posted in the CAS system under "unallocated credits".

If you want to credit a performance that is listed under "unallocated credits", you have submit a form to the Masters Examination Board.

For forms, please refer to the website of the KIT Faculty of Chemical and Process Engineering

https://www.ciw.kit.edu/1619.php
2 Qualification Profile Master Chemical and Process Engineering

The Master’s program Chemical and Process Engineering provides extensive detailed knowledge in theory and practice in engineering, mathematics and natural sciences with a focus on chemical process engineering, product design and plant engineering. The Master’s degree qualifies graduates to work scientifically and act responsibly within their professional activity and in the society. Chemical engineers make a crucial contribution to the development of technically feasible approaches on the way to a climate-neutral society by closing material cycles to a great extent.

Based on the Bachelor’s program, the compulsory program in the first year focuses on advanced methodical and qualified fundamental knowledge of mathematics, natural sciences and engineering. This knowledge is further advanced within two specialized courses elected by the students. In the scope of the Master’s thesis, students prove their ability to work on a problem within their field of expertise independently and in a defined time frame. They also prove their ability to use scientific methods that correspond to the current state of research and to put down their results in a scientific monograph. In addition, an internship provides insight into the fields of activity of an engineer.

Graduates are qualified to analyze and solve problems using scientific methods and to abstract and formulate complex problems. They are also able to develop new methods, processes and products. Graduates are qualified to combine knowledge from various professional areas and to familiarize themselves systematically with new tasks. They can reflect non-technical impacts of engineering activities and consider those impacts by acting responsibly.
3 English Modules/ Lectures

Specialized Course Water Technology (Wassertechnologie)
- Water Technology 6 ECTS WS
- Membrane Technologies in Water Treatment 6 ECTS SS
- Process Engineering in Wastewater Treatment 6 ECTS WS
- Practical Course in Water Technology 4 ECTS WS
- Microbiology for Engineers 4 ECTS SS
- Environmental Biotechnology 4 ECTS WS
- Biofilm Systems 4 ECTS SS
- Micropollutants in Aquatic Environment – Determination, Elimination, Environmental Impact, 4 ECTS WS
- Instrumental Analytics 4 ECTS SS

Specialized Course Combustion Technology (Verbrennungstechnik)
- Technical Systems for Thermal Waste Treatment 4 ECTS SS
- Design of a Jet Engine Combustion Chamber 6 ECTS WS

Specialized Course Technical Thermodynamics (Technische Thermodynamik)
- Physical Foundations of Cryogenics 6 ECTS SS
- Cryogenic Engineering 6 ECTS WS

Specialized Course Energy and Combustion Technology
- Technical Systems for Thermal Waste Treatment 4 ECTS SS
- Applied Combustion Technology 4 ECTS SS
- Laboratory Work in Combustion Technology 4 ECTS SS
- High Temperature Process Engineering 4 ECTS SS
- Design of a jet engine combustion chamber 6 ECTS WS
- Energy from Biomass 6 ECTS WS
- Transport and Storage of Chemical Energy Carriers 4 ECTS SS
- Liquid Transportation Fuels 6 ECTS WS

Technical Supplement Course
- Additive Manufacturing for Process Engineering 6 ECTS SS

Bachelor
- International Concepts in Water Treatment 5 ECTS SS

Extensive documentation in English is provided for the following German-language modules:
- Food Biotechnology (Lebensmittelbiotechnologie) 5 ECTS WS
# 4 Field of study structure

## 4.1 Master Thesis

<table>

### Mandatory
- **Process Technology**

### Election block: CIW (at least 3 items)
- M-CIWVT-103058: Thermodynamics III [6 CR]
- M-CIWVT-103064: Selected Formulation Technologies [6 CR]
- M-CIWVT-103072: Computational Fluid Dynamics [6 CR]
- M-CIWVT-104377: Thermal Transport Processes [6 CR]
- M-CIWVT-104378: Particle Technology [6 CR]
- M-CIWVT-104383: Kinetics and Catalysis [6 CR]
- M-CHEMBIO-104486: Physical Chemistry (incl. Lab) [6 CR]

### Election block: BIW (at most 1 item)
- M-CIWVT-103065: Biopharmaceutical Purification Processes [6 CR]
- M-CIWVT-104384: Biotechnological Production [6 CR]
- M-CIWVT-104386: Integrated Bioprocesses [6 CR]
- M-CIWVT-105380: Membrane Technologies in Water Treatment [First usage possible from 4/1/2021. 6 CR]
4.3 Technical Supplement Course

Credits
10

Election regulations
Elections in this field require confirmation.
### Election block: Technical Supplement Course (at least 10 credits)

<td>English</td>
<td>5</td>
<td>1</td>
</tr>
</tbody>
</table>

Mandatory

- T-CIWVT-110902 Additive Manufacturing for Process Engineering - Examination 5 CR Dittmeyer
- T-CIWVT-110903 Practical in Additive Manufacturing for Process Engineering 1 CR Dittmeyer

Competence Certificate

Learning control consists of:

- Practical (ungraded)
- Oral examination with a duration of about 30 minutes

Competence Goal

Students are familiar with the concept of a fully digital fabrication chain using and linking together modeling and simulation, computer aided design and 3D printing. They know the most important 3D printing methods suitable for process engineering applications. Moreover, they are able to use standard tools for 3D data generation and they already own hands on practical experience with the use of a metal 3D printer for fabrication of highly precise parts with complex shape.

Module grade calculation

Module grade is the grade of the oral examination.

Content

The rationale for additive manufacturing and key aspects of this approach are explained. An overview of different methods and materials for 3D printing is given with a focus on the use of 3D printed parts or fully functional devices in chemical and process engineering. Tools for 3D data generation for additive manufacturing are introduced and design rules for selected 3D printing methods are explained. Illustrative examples for 3D printed components and functional devices in process engineering are presented and discussed based on literature and own research. In the practical, students will work together in small groups on a fully digital fabrication of functional parts by selective laser melting of metal powder going through a cycle of 3D data generation, 3D printing, and finishing of the printed parts.

Workload

- Lectures: 30 h
- Practical: 16 h (8 experiments)
- Homework: 90 h
- Exam Preparation: 44 h
- Total: 180 h

Literature

</tr>
</tbody>
</table>

**Competence Certificate**
The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO). The grade of the oral examination is the module grade.

**Competence Goal**
- The students are able to describe and explain the characteristics of the different flames
- The students can apply the combustion characteristics for burner design.
- The students can test burners in order to investigate their operability and analyze the gained results.
- The students are able to evaluate burner operability with regard to the application.

**Prerequisites**
None

**Content**
Basic principles of combustion; Fuels; Combustion characteristics; Structure and properties of stationary laminar and turbulent premixed and diffusion flames; Flame stability; Laws of similarity and burner scale-up; Combustion of liquid fuels; Heterogeneous combustion of solid fuels; Examples of industrial burners.

**Workload**
- Attendance time (Lecture): 30 h
- Homework: 20 h
- Exam Preparation: 70 h

**Literature**
- Joos, Technische Verbrennung
- Warnatz, U. Maas, Technische Verbrennung
- R. Turns, An Introduction to Combustion
5.3 Module: Applied Combustion Technology [M-CIWVT-104299]

**Competence Certificate**
Success control is a computerized test with a duration of 20 minutes.

**Competence Goal**
Students are able to use a suitable software programme for the statistical analysis of given data sets. They can answer specific statistical questions with the help of this software. They can explain and evaluate the chosen procedure for answering such questions. Students can usefully choose and apply graphic representations to present their analysis results. They can evaluate their choice in comparison to other graphical representations. At the end, students are expected to be able to transfer the obtained competences regarding data analysis and graphical presentation to their own experimental data. The aim for the students is to solve own statistical problems independently.

**Prerequisites**
None

**Content**
Familiarization with basic functions of the software OriginPro. Application of statistic tests and analysis methods to given data sets. Graphical representation of analysis results. Analysis and graphical representation of own data sets.

Examples used in this module stem from the field of life sciences.

**Recommendation**
Knowledge of basic concepts in statistics and data analysis is expected. Therefore, it is highly recommended to have followed the module ....

The software OriginPro, which can be obtained from the software shop at KIT, is used in this module. Students are expected to bring their own PC (software already installed) to the lectures.

**Workload**

- Lectures and Exercises: 30 h
- Homework: 45 h
- Exam preparation: 45 h

**Literature**
Information during the lecture.
5 5 Module: Applied Molecular Thermodynamics [M-CIWVT-104361]

Responsible: apl. Prof. Dr. Michael Türk
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course

**Mandatory**

| T-CIWVT-106841 | Biofilm Systems | 4 CR | Horn |

**Competence Certificate**
Oral exam, about 20 min

**Competence Goal**
Students can describe the structure and function of biofilms in natural habitats as well as in technical systems. They can explain the major influencing factors and processes for the formation of biofilms. They are familiar with techniques for visualizing biofilm structures as well as with models for simulating biofilm growth. They are able to select appropriate methods for the analysis of biofilms and to evaluate the habitat conditions.

**Module grade calculation**
Grande of the module is the grade of oral examination.

**Prerequisites**
None

**Content**
Microorganisms typically organize in the form of biofilms in technical and natural aquatic systems. However, biofilms are not only accumulated microorganisms at interfaces: They are bound together by a matrix of extracellular polymeric substances (EPS). In this course, the structure and function of biofilms in different natural habitats and technical applications (biofilm reactors, biofilms in natural waters, biofouling in technical systems and biofilms for power generation in microbial fuel cells) are presented and discussed. Biofilm growth and abrasion as well as models for the simulation of these processes are introduced. Furthermore, microscopic techniques for the visualization of biofilm structures are presented.

**Workload**
Attendance time: 30 h
Preparation/follow-up: 30 h
Examination + exam preparation: 60 h
5.9 Module: Biomass Based Energy Carriers [M-CIWVT-104288]

**Responsible:** Dr.-Ing. Siegfried Bajohr

**Organisation:** KIT Department of Chemical and Process Engineering

**Part of:**
- Technical Supplement Course
- Specialized Course I / Fuel Technology
- Specialized Course I / Combustion Technology
- Specialized Course I / Technical Biology
- Specialized Course I / Energy Process Engineering
- Specialized Course I / Bioresource Engineering

**Mandatory**

| T-CIWVT-108828 | Energy from Biomass | 6 CR | Bajohr |

**Competence Certificate**
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**
The course mediates fundamentals and process engineering aspects of biomass conversion and conditioning processes. The students learn to understand and to evaluate processes for biomass utilization by balancing mass and energy streams. Taking into account regional and global feedstock potentials the students are enabled to choose the most efficient conversion technologies.

**Module grade calculation**
The grade of the oral examination is the module grade.

**Prerequisites**
None

**Content**
Fundamentals on biomass and its production pathways to energy carriers like substitute natural gas (SNG), bio diesel or other fuels.
Production, properties, and characterization of biomass.
Potential and sustainability; energy demand and supply, potentials today and in the future, CO2 emissions and reduction potential.
Utilization and conversion of biogenic oils and fats.
Biochemical conversion to liquid products like alcohols; fermentation to biogas and its upgrading.
Thermochemical conversion of biomass via pyrolysis and gasification; examples for synthesis processes (FT-, CH4-, CH3OH-, DME-synthesis).

**Workload**
- Attendance time (Lecture): 45 h
- Homework: 75 h
- Exam Preparation: 60 h

Module: BioMEMS - Microsystems Technologies for Life Sciences and Medicine I [M-MACH-100489]

Responsible: Prof. Dr. Andreas Guber
Organisation: KIT Department of Mechanical Engineering

Part of: Technical Supplement Course
Specialized Course I / Biopharmaceutical Process Engineering

Credits: 4
Grading scale: Grade to a tenth
Recurrence: Each winter term
Duration: 1 term
Language: German
Level: 4
Version: 1

Mandatory
T-MACH-100966 BioMEMS - Microsystems Technologies for Life-Sciences and Medicine I 4 CR Guber

Competence Certificate
Written exam (75 min)

Competence Goal
The lecture will first address relevant microtechnical manufacturing methods. Then, selected biomedical applications will be presented, as the increasing use of microstructures and microsystems in Life-Sciences und in medicine leads to improved medico-technical products, instruments, and operation and analysis systems.

Prerequisites
none

Content
Introduction into various microtechnical manufacturing methods: LIGA, Micro milling, Silicon Micromachining, Laser Microstructuring, µEDM, Metal-Etching
Biomaterials, Sterilisation.
Examples of use in the life science sector: basic micro fluidic structures: micro channels, micro filters, micromixers, micropumps, microvalves, Micro and nanotiter plates, Microanalysis systems (µTAS), Lab-on-chip applications.

Mandatory
T-CIWVT-108902 Bioprocess Development 4 CR Kopf

Competence Certificate
The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO).
The grade of the oral examination is the module grade.

Competence Goal
The Students:

- get familiar with processes and techniques to develop industrial scale, biotech-based processes
- gain insight into the workflow of large scale (double-digit kt/a) industrial bioprocess development
- learn to combine theoretical understanding with practical applications related to relevant industrial systems.

understand relevance of tecno-economic evaluation as a basis for developing competitive processes

Prerequisites
None

Content

- **Process to develop new or alternative, bio-based production process:**
  Ideation, Basic Concept, Critical analysis, Development steps
- **Value Proposition of novel product / process:**
  Quality, Performance, Price, Eco-efficiency, Regional aspects
- **Critical aspects along the development process:**
  Feedstock issues, Design to Cost, Specification and Performance, Regulatory Issues, Eco-efficiency (raw material and energy efficiency)
- **From Lab to Production (focus of lecture):**
  Phases of a development process: Explorative Research, Proof of Principle, Proof of Concept, Scale-up and Apparatus design, Plant design, Production
- **Competitor Intelligence:**
  Competitors with their “own” processes, Alternative products, similar in application
- **Benchmarking as a development tool:**
  Cost Benchmarking, CoP, as a development tool to identify optimization potential
- **Production scenarios:**
  Own investment, Toller, Production Partner

Workload

**Competence Certificate**

The success control consists of two partial services:

- Exam preparation: Seminar lecture of about 10 minutes during the course; Study achievement according to § 4 (3) SPO
- written examination of 120 minutes according to § 4 (2) Nr. 1 SPO

Module grade is the grade of the written exam.

**Competence Goal**

Students are able to apply the knowledge of processes for the biotechnological production of certain substances on issues relating to new production processes. They identify common principles and laws of the various processes. They can independently solve problems in the development of process schematics and can use the knowledge mediated in the lecture.

**Prerequisites**

The Seminar “Biotechnological Production” is a precondition for admittance to the written exam.

The following knowledge is required: biochemistry, genetics, cell biology, microbiology.

**Content**

After giving an overview of the historical development of biotechnology common basic principles of biotechnological production processes are presented. Using recent examples and selected products, processes and methods of industrial or microbial biotechnology, plant cell culture techniques and animal cell culture techniques are presented. Selected examples include e.g. the production of microbial biomass, organic acids, alcohols and ketones, amino acids, vitamins, antibiotics, enzymes, biopolymers, flavorings, natural substances with plant cell cultures, monoclonal antibodies and biopharmaceuticals with animal cell cultures in an industrial scale.

**Workload**

- Attendance time (Lecture): 60 h
- Homework: 40 h
- Preparation presentation at the seminar: 20 h
- Attendance time (Lecture): 60 h

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

This lecture conveys the role of biotechnological processes in a future bioeconomy. Possible raw materials, their preparation and subsequent biotechnological implementation into energy carriers, platform chemicals and special microbial products are presented.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

After an introduction to the basics of a future bioeconomy and the comparison of chemical and biotechnological industrial processes using renewable resources, their preparation for biotechnological use and their implementation into energy sources (methane, ethanol), platform chemicals (lactate, dicarboxylic acids, amino acids) and special microbial products (polysaccharides, biosurfactants, flavoring substances) and coupling products like bioplastics. The examples of sugar production, papermaking and ethanol production explain various biorefinery concepts.

Mandatory

T-CIWVT-108827 Catalytic Processes in Gas Technologies 4 CR Bajohr

Competence Certificate
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

Competence Goal
The students know the relevant catalytic processes in gas technology. Understanding the interaction between thermodynamic, mass and heat transfer and reaction kinetic on the basis of concrete examples enables them to evaluate reactor concepts and develop new approaches for catalytic processes.

Module grade calculation
The grade of the oral examination is the module grade.

Prerequisites
None

Content
Sources, utilization, demand and characterization of gaseous chemical energy carriers.
Catalytic processes for production, conditioning and utilization of gaseous energy carriers. Synthesis and utilization (e.g. methanation and steam reforming); exothermic vs. endothermic processes.
Catalytic processes for gas cleaning and conditioning.

Workload
- Attendance time (Lecture): 30 h
- Homework: 50 h
- Exam Preparation: 40 h

Literature
## Module: Chemical Process Engineering II [M-CIWVT-104281]

**Responsible:** Prof. Dr. Bettina Kraushaar-Czarnetzki  
**Organisation:** KIT Department of Chemical and Process Engineering  
**Part of:** Technical Supplement Course  
Specialized Course I / Fuel Technology

### Mandatory

| T-CIWVT-108817 | Chemical Process Engineering II | 4 CR | Kraushaar-Czarnetzki |

### Competence Certificate

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

### Competence Goal

Students know the film model and are able to apply it for the calculation of mass transport effects in reacting multiphase systems. They know technical two- and three-phase reactors with their fields of application and their limits. For multiphase reactors with well-defined properties, they are able to design reactor dimensions and to calculate suitable process conditions.

### Module grade calculation

The grade of the oral examination is the module grade.

### Prerequisites

None

### Content

Theory of mass transfer and reaction in multiphase reacting systems (film model); technical reactors for two-phase systems (gas-liquid, liquid-liquid, gas-solid); reactors for three-phase systems.

### Workload

- Attendance time (Lecture): 30 h  
- Homework: 50 h  
- Exam Preparation: 40 h

### Literature

- Kraushaar-Czarnetzki: Skript "Chemische Verfahrenstechnik II";  
- Kraushaar-Czarnetzki: Foliensammlung "Heterogene Katalyse I".

Alle Lernmaterialien und Hinweise auf Spezialliteratur sind auf der Lernplattform ILIAS (https://ilias.studium.kit.edu) abgelegt.
5.23 Module: Chem-Plant [M-CIWVT-104461]

**Responsible:** Prof. Dr. Sabine Enders

**Organisation:** KIT Department of Chemical and Process Engineering

**Part of:** Technical Supplement Course

**Competence Certificate**

Learning Control is an oral examination with a duration of about 20 minutes.

**Competence Goal**

- The students are able to describe and explain why it is important to protect the environment.
- The students are able to name the major combustion pollutants and describe the effect on the environment.
- The students understand the physicochemical mechanisms of the formation of different pollutants in the combustion process.
- The students are able to name and describe primary measures to reduce emissions.
- The students understand the limitations of primary measures and are able to name and describe secondary measures to reduce emissions.
- The students understand and can assess differences of emissions from engine and gas turbine combustion.

**Prerequisites**

None

**Content**

- Importance of environmental protection.
- Combustion pollutants and their effects.
- Pollutant formation mechanisms.
- Combustion-related measures (primary measures) to reduce emissions.
- Exhaust gas cleaning: secondary measures to reduce emissions.
- Emissions from engine combustion and from combustion in gas turbines.

**Workload**

- Lectures: 30 h
- Homework: 60 h
- Exam preparation: 30 h
5.25 Module: Combustion Technology [M-CIWVT-103069]

**Responsible:** Prof. Dr.-Ing. Dimosthenis Trimis

**Organisation:** KIT Department of Chemical and Process Engineering

**Part of:**
- Technical Supplement Course
- Specialized Course I / Fuel Technology
- Specialized Course I / Combustion Technology
- Specialized Course I / Energy Process Engineering

**Mandatory**

| T-CIWVT-106104 | Combustion Technology | 6 CR | Trimis |

**Competence Certificate**

Learning Control is an oral examination with a duration of about 20 minutes (section 4 subsection 2 SPO). Grade of the module is the grade of the oral examination.

**Competence Goal**

- The students are able to describe and explain the characteristics of the different flame types.
- The students can quantitatively estimate/calculate major combustion characteristics like flame temperature and flame velocity. They further understand the physicochemical mechanisms affecting flammability limits and quenching distances.
- The students understand and can assess the influence/interaction of turbulence, heat and mass transfer to reacting flows.
- The students understand the flame structure and the hierarchical structure of reaction kinetic mechanisms.
- The students understand and can assess the influence of interaction between different time scales of chemical kinetics and fluid flow in reacting flows.
- The students are able to assess and evaluate burner operability with regard to the application.

**Prerequisites**

None

**Content**

- Introduction and significance of combustion technology
- Thermodynamics of combustion: Mass and energy/enthalpy balances
- Equilibrium composition
- Flame temperature
- Reaction mechanisms in combustion processes
- Laminar flame velocity and thermal flame theory
- Kinetics related combustion characteristics and experimental characterization: laminar flame velocity, flammability limits, ignition temperature, ignition energy, ignition delay time, quenching distance, flash point, octane and cetane number
- Turbulent flame propagation
- Industrial burner types

**Workload**

- Lectures and Exercises: 45 h
- Homework: 25 h
- Exam Preparation: 110 h

**Competence Certificate**

The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Understanding the principle and modelling of regenerative cryocoolers; Understanding and applying of essential engineering methods and components for the conception and design of low-temperature plants and cryostat systems; Understanding of laboratory measurement principles, assessing and applying of sensors and instruments for cryogenic measurement tasks and analysing of measurement uncertainties.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Cryogenic applications; Regenerative cooling with cryocoolers; Fundamentals of low-temperature plant and cryostat design, including fluid mechanics and heat transfer, thermal contacts and thermal insulation, cryogenic pumping of gasses, regulations, design components and safety; General principles of measurement and uncertainties as well as cryogenic temperature, pressure and flow measurement.

Competence Certificate
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

Competence Goal
The students are familiar with statistical parameters and are able to judge. Out of the variety of statistical approaches for data analysis they are able to choose the most promising tool for a given question.

Module grade calculation
The grade of the oral examination is the module grade.

Prerequisites
None

Content
Introduction into statistics and its application in data analysis. Descriptive statistics with typical quantities and parameters like standard deviation, distributions and their applications. The application of these tools leads to statistical tests, which are needed in approximation and regression. Chemometric data treatment and statistic processing of large data sets will be studied on the example of multivariate approaches for revealing correlations.

Workload

**Competence Certificate**
Learning control is an examination of another kind according to § 4 Abs. 2 Nr. 3 SPO.

The module grade consists of the grade of the oral examination (35 points maximum) and the cooperation / presentation during the project (65 points maximum).

The learning control is passed when at least 45 points are achieved.

**Competence Goal**

- The students are able to apply the relevant design parameters in order to design a jet engine combustor.
- The students are able to evaluate design modifications due to the performance of a jet engine combustor.
- The students are able to review literature studies and use them for their design aims.
- The students learn to work target oriented following a time schedule.
- The students learn to work in a team and to exchange information between the teams by definition of interfaces.
- The students learn to present clearly and in an acceptable time the work progress and the most important results.

**Prerequisites**
None

**Content**
At the beginning the description and operating mode of a jet engine with emphasis on the combustor is explained in 4 lessons. Afterwards the design of the combustor based on geometrical boundary conditions (engine casing) and the performance conditions will start. The tasks to be solved for the design are the combustor aerodynamic (pressure loss, air split), thermal management (temperature distribution, wall cooling, material), calculation of emissions and the construction of the combustor. In order to solve the tasks the students have to be organized in groups which are responsible for the tasks mentioned. The work progress will be controlled by a time schedule and regular presentations. The complete design will be discussed in a final presentation.

**Workload**

- Attendance time (Lecture): 30 h
- Homework: 45 h
- Project: 80 h
- Exam Preparation: 45 h

**Literature**

- Lefebvre, Gas Turbine Combustion
- Rolls-Royce plc, the jet engine

5.32 Module: Design of Micro Reactors [M-CIWVT-104286]

**Responsible:** Prof. Dr.-Ing. Peter Pfeifer

**Organisation:** KIT Department of Chemical and Process Engineering

**Part of:** Technical Supplement Course

**Credits:** 6

**Grading scale:** Grade to a tenth

**Recurrence:** Each winter term

**Duration:** 1 term

**Language:** German

**Level:** 5

**Version:** 1

---

## Competence Certificate

The examination is an oral examination with a duration of about 25 minutes (section 4, subsection 2, number 2, SPO).

## Competence Goal

The students are able apply the methods of process intensification by microstructuring of the reaction zone and are capable of analyzing the advantages and disadvantages while transferring given processes into microreactors. With knowledge of special production processes for micro reactors, students are able to design microstructured systems in terms of heat exchange and to analyze the possibilities of transferring processes from conventional technology into the microreactor with regard to heat transfer performance. They understand also how the mechanisms of mass transport and mixing interact in microstructured flow mixers, and are able to apply this knowledge to the combination of mixing and reaction. They can also analyze possible limitations in the process adaptation and are thus able to design microstructured reactors for homogeneous reactions appropriately. The students understand the significance of the residence time distribution for the conversion and selectivity and are capable of analyzing the interaction of mass transport by diffusion and hydrodynamic residence time in microstructured equipment in given applications.

## Prerequisites

**Competence Certificate**

Learning Control consists of:

- Seminar/ Presentation
- written elaboration/ exposé

**Competence Goal**

Students can use their knowledge on food products and their processing to develop an innovative food product of their own. They also can develop a suitable process for its production with regards to energy efficiency and sustainability. Students are able to use basic principles of scale up in the food industry and to use strategies to ensure food quality and safety on a large scale. They can evaluate these concepts regarding their own food product. They understand basic concepts of marketing and packaging technology and can apply those concepts to their innovative product and analyse them. Students can apply basic principles of project management and evaluate them regarding the development of their food product.

**Module grade calculation**

50 % presentation (individual grade), 50 % written elaboration (group grade)

**Prerequisites**

None

**Content**

Development of a food product consumer ready (aspects included are amongst others food quality and safety, scale up, energy efficiency, sustainability, marketing and packaging); project management

**Annotation**

There is an opportunity to participate in the competition "EcoTrophelia".

The maximum number of participants is limited. Admission is based on a selection interview.

**Workload**

- Lab work: 100 h
- Homework: 20 h
- Written elaboration: 30 h
- Seminar and presentation: 30 h

Mandatory

T-CIWVT-110111 Digitization in Particle Technology 4 CR Gleiß

Competence Certificate
Learning control is an oral examination with a duration of about 30 minutes.

Competence Goal
Capability to develop integrated strategies for the digitalization of processes in particle technology. This includes the development of methods but also the application of numerical methods.

Module grade calculation
The Module grade is the grade of the oral examination.

Prerequisites
None

Content
Teaching methods for the systematic development of engineering-scientific digitization strategies for particle technology. This includes the mathematical fundamentals of process simulation and model predictive control as well as basics of online and in-situ process analysis. Furthermore, the metrological acquisition of large amounts of data requires complex evaluation methods for further processing and reduction of the generated data. The basics of multivariate data analysis as well as machine learning are taught. The developments in digitalization in particle technology are supported by various practical examples. In addition to the lecture a practical exercise in the form of a project work takes place.

**Competence Certificate**
The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**
Students are able to identify and design a drying process. They will have an overview on the state of the art in drying technology science.
They are able to interpret, evaluate and select a proper drying process.
The qualification goal is to learn proper methods and drying technology basics in order to transfer this fundamental knowledge to new processes and apparatus.

**Module grade calculation**
The grade of the oral examination is the module grade.

**Prerequisites**
None

**Content**
Introduction to drying technology and industrial applications; Modeling of heat mass transfer during drying and modeling of the entire drying process; Determination of material properties, sorption, diffusion; Determination of typical drying curves and regimes
Fundamentals in polymer film drying and drying of porous materials; Basic principles of spray drying, fluidized bed drying, microwave drying, infrared drying and freeze drying.

**Workload**
- Attendance time (Lecture): 45 h
- Homework: 90 h
- Exam Preparation: 45 h

Election notes
You can elect one of the following components:

"Energie und Umwelt" containing the lectures:
- Verbrennung und Umwelt (german)
- Technical Systems for Thermal Waste Treatment (english)

"Energy and Environment" containing the lectures:
- Applied Combustion Technology (english)
- Technical Systems for Thermal Waste Treatment (english)

Election block: Election Energy and Environment (1 item as well as 8 credits)

Competence Certificate
Learning Control is an oral examination with a duration of about 40 minutes.

Competence Goal
Part "Technical Systems for Thermal Waste Treatment"
The students are enabled to characterize different waste fractions and select suitable technologies for waste to energy conversion based on detailed process understanding and by application of evaluation tool combining economical and ecological aspects. The students gain a profound inside into process operation.

Part "Combustion and Environment"/ "Applied Combustion Technology"

- The students are able to describe and explain why it is import to protect environment.
- The students are able to name the major combustion pollutants and describe the effect on the environment.
- The students understand the physicochemical mechanisms of the formation of different pollutants in the combustion process.
- The students are able to name and describe primary measures to reduce emissions.
- The students understand the limitations of primary measures and are able to name and describe secondary measures to reduce emissions.
- The students understand and can assess differences of emissions from engine and gas turbine combustion.

Prerequisites
None
Content
Lecture "Technical Systems for Thermal Waste Treatment"

- Waste: definition, specification, potential;
- Basic thermo-chemical processes for waste treatment: pyrolysis, gasification, combustion
- Technical systems for thermal waste treatment:
  - combustion: Grate furnace, rotary kiln, fluidized bed,
  - gasification: fixed bed, fluidized bed, entrained flow
  - pyrolysis: rotary kiln
- Refractory technology
- Legal aspects of waste management
- Tools for critical evaluation of waste treatment technologies
- Excursion to industrial sites

Lecture either "Combustion and Environment"

- Importance of environmental protection.
- Combustion pollutants and their effects.
- Pollutant formation mechanisms
- Combustion-related measures (primary measures) to reduce emissions.
- Exhaust gas cleaning: secondary measures to reduce emissions.
- Emissions from engine combustion and from combustion in gas turbines.

or "Applied Combustion Technology"
oder "Applied Combustion Technology"

Basic principles of combustion; Fuels; Combustion characteristics; Structure and properties of stationary laminar and turbulent premixed and diffusion flames; Flame stability; Laws of similarity and burner scale-up; Combustion of liquid fuels; Heterogeneous combustion of solid fuels; Examples of industrial burners.

Workload

- Lectures: 60 h
- Homework: 110 h
- Exam preparation: 70 h
5.39 Module: Energy from Biomass [M-CIWVT-105207]

**Responsible:** Dr.-Ing. Siegfried Bajohr  
Prof. Dr. Nicolaus Dahmen

**Competence Certificate**

The examination is a written examination with a duration of 90 minutes (section 4 subsection 2 number 1 SPO). The grade of the written examination is the module grade.

**Competence Goal**

The course mediates fundamentals and process engineering aspects of biomass conversion and conditioning processes. The students learn to understand and to evaluate processes for biomass utilization by balancing mass and energy streams. Taking into account regional and global feedstock potentials the students are enabled to choose the most appropriate conversion technologies and applications.

**Prerequisites**

None

**Content**

All relevant technologies involved in biomass conversion processes for bioenergy production are introduced, also evaluating their state of development and application potential. If necessary, basics of chemistry, thermodynamic equilibrium and/or of reaction kinetic calculations are introduced. In particular, the lecture consists of the following topics.

- Potential of biomass for sustainable bioenergy production, energy demand and supply today and in the future, CO2 emission and its reduction potential
- Production, composition, properties, and characterization of biomass
- Principle production pathways to energy carriers like substitute natural gas (SNG), biodiesel, bioethanol, synthesis gas or other fuels.
- Utilization and conversion of biogenic oils and fats.
- Biochemical conversion to liquid products like alcohols; fermentation to biogas and its upgrading.
- thermochemical conversion of biomass via combustion, pyrolysis and gasification; synthesis processes for synthetic fuels production (Methane-, Fischer-Tropsch-, Methanol-to-gasoline-, DME-synthesis).
- Biofuels in comparison

By an excursion to the 3-5 MW pilot plant for synthetic fuel production at KIT insight into a technically representative pilot plant is gained.

In the exercises, special and practical aspects of the lecture are investigated in more deepness. The students evaluate mass balances along whole process chains as well as energetic or carbon utilization efficiencies, compare alternative technologies. The results are presented and discussed in the learning group.

**Workload**

- Attendance time: Lecture 30 h, Seminar 15 h
- Homework, Preparation of Presentation: 75 h
- Exam Preparation: 60 h

**Competence Certificate**

The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Students should be enabled to evaluate the health-promoting properties of foods and diets based on their nutrient content.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Relevance of nutrition for human health and well-being. Focus will be on macro- and micronutrients (carbohydrates, proteins, lipids, vitamins, minerals, trace elements, dietary fiber, and phytochemicals) and on their structural and metabolic functions. Major food groups (plant-/animal-based) as sources of essential nutrients will be introduced. In addition, functional aspects of foods/food constituents (e.g. cholesterol-lowering, immunostimulatory; reduction of disease risk) will be presented.

**Workload**

- Attendance time (Lecture): 30 h
- Homework: 45 h
- Exam Preparation: 45 h
5.47 Module: Formulation of (Bio)pharmaceutical Therapeutics [M-CIWVT-104266]

**Competence Certificate**
The examination is an oral examination with a duration of about 15 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**
The students will be able to discuss different development routes for the formulation of pharmaceuticals. The implications of different physiologies for the different formulations will be analyzed. Pro's and con's of different formulations and applications are evaluated.

**Module grade calculation**
The grade of the oral examination is the module grade.

**Prerequisites**
None

**Content**
Fundamentals; Development of formulations for pharmaceuticals; Oral, Parenteral, Dermal, Nasal, Pulmonal; Formulation for Biopharmaceuticals

**Workload**
- Lectures: 30 h
- Homework: 60 h
- Exam preparation: 30 h
5.48 Module: Formulation Processes for Life Sciences [M-CIWVT-104402]

**Competence Certificate**
The examination is a written examination with a duration of 90 minutes (section 4 subsection 2 number 1 SPO).

**Competence Goal**
Students understand specific needs of liquid and solid formulations for life science application. They are able to select appropriate additives and understand their relevance for product preparation and stabilization. They understand and master basics of formulation preparation and cope with the design of suitable processes. They are acquainted with conventional and innovative technologies. They identify correlations between process parameters and product performance. They are able to transfer process knowledge between different products. Students are able to identify relevant parameters for product performance. They are able to select suitable scientific based characterization methods and can discuss analytic results critically.

**Module grade calculation**
The grade of the written examination is the module grade.

**Prerequisites**
None

**Content**
Additives and active substances (LV FT1: U. van der Schaaf/LVT):
- Substance categories: Properties and molecular structure; Purposes and functionality: Interfacial activity, modulation of viscosity, etc.; Measurement techniques and newest developments

Emulsification and Dispersion Technologies : (LV FT2: H.P. Karbstein/LVT):
- Characteristics of liquid formulations; processing objectives; fundamentals of particle desaggregation and disruption as well as droplet break-up; particle and droplet stabilization in liquid continuous phase; apparatus design and operation principle; process design; process and property function for preparation of liquid formulations; characterisation of liquid formulation properties: fundamentals and measurement devices; innovative developments.

Drying of dispersions: (LV FT3: H.P. Karbstein/LVT):
- Objectives of drying, fundamentals of product stabilisation for extended shelf life; processes using the example of spray drying: operation principles, apparatus design, process design, process function; fundamentals of powder quality characterization, instant properties, fundamentals and measurement devices; agglomeration for improved instant properties.

Extrusion Technology: (LV FT4: M. A. Emin/LVT):
- Fundamentals of extrusion and extruded product design, extrusion equipment, process design, characterization of the products and process (fundamentals of instrumentation and modeling)

This lecture is prerequisite for practical extrusion course, which is offered as an optional course (i.e. NF or VF LVT).

**Annotation**
2 of the 4 described lectures may be elected.
Workload

- Attendance time (Lecture): 30 h

The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO). The grade of the oral examination is the module grade.

**Competence Goal**  
The students are enabled to characterize fuel resources and derived fuels / chemical energy carriers and to critically evaluate the processes for conversion of fuel resources to chemical energy carriers with respect to process technology, economy and ecology.

**Prerequisites**  
None

**Content**

- Overview of fuel resources: coal, oil, gas, biomass – process of formation, resources, consumption  
- Mining technology  
- Characterization and analysis of fuel resources and fuels  
- Basics and processes for conversion of fuel resources into chemical energy carriers / fuels  
- Processes of fuel conversion: power / heat, mobility, synthesis  
- Tools for critical evaluation of process chains: LCA, ecoefficiency analysis

### Mandatory

| T-CIWVT-108893 | Fundamentals of Motoric Exhaust Aftertreatment | 4 CR | Dittler |

#### Competence Certificate
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO). The grade of the oral examination is the module grade.

#### Competence Goal
Students develop an understanding for the challenges of engine exhaust aftertreatment on the basis of the taught basics of the composition of engine emissions. They are able to define application-specific solutions for emission reduction and know the main problems in the operating behavior of the respective components (oxidation catalyst, particle filter, SCR catalyst, ammonia slip catalyst). Students learn to classify current issues objectively and to evaluate them independently.

### Prerequisites
None

### Content
- Composition of combustion engine exhaust gases
- Legal framework conditions
- Oxidation catalysts: design, function & layout
- Particle reduction – exhaust aftertreatment with particle filters: design, function & layout of particle filters; soot removal; aging by ash deposits; ash removal
- Nitrogen oxide reduction – exhaust aftertreatment by selective catalytic reduction: basic reactions; possible reducing agents; AdBlue® – specification & decomposition; characterization of applied catalysts
- Combined exhaust aftertreatment systems – design & function
- Safety and vehicle related aspects of exhaust aftertreatment integration into the vehicle

### Workload
- Attendance time (Lecture): 30 h
- Homework: 50 h
- Exam Preparation: 40 h

</tbody>
</table>

**Competence Certificate**
The examination is an oral examination with a duration of about 30 minutes (single examination) or 20 minutes (comprehensive examination in VF Gas-Partikel-Systeme) (section 4 subsection 2 number 2 SPO).

**Competence Goal**
Students develop an understanding for the basic physical processes that can be used for the (size dependent) separation of particles from a carrier gas flow, and become acquainted with related types of separation apparatus. They are able to identify the crucial operational and process conditions needed for a preselection of suitable separation devices for a specific separation task. They can describe quantitatively the influence of the main operational and process parameters on separation efficiency and energy consumption of an individual apparatus. The students learn to detect practical problems in the operation of separation devices, and they can identify procedures to overcome these issues.

They are therefore able to independently select the most suitable device and the corresponding operational mode for a specific separation task.

**Module grade calculation**
The grade of the oral examination is the module grade.

**Prerequisites**
None

**Content**
- **Fundamentals:**
  - Basic quantitative description of separation processes
  - Elementary theory for classifiers and separators
  - Criteria for selection and evaluation of a separation apparatus
  - Legal framework
- **Specific separators for gas particle systems:**
  - Functionality, design, fields of application, limitations, practical examples
  - Approximate quantitative calculation of separation efficiency and energy consumption for exemplary classification or separation tasks
  - Types of devices that are described in the lecture:
    - Classifiers in gravity and centrifugal force fields
    - Centrifugal separators (gas cyclone)
    - Filtering separators
    - Wet separators (Scrubbers)
    - Electrical separators (Electrostatic precipitators)

**Workload**
- Attendance time (Lecture): 45 h
- Homework: 75 h
- Exam Preparation: 60 h
Module: Heat Exchangers [M-CIWVT-104371]

**Responsible:** Prof. Dr.-Ing. Thomas Wetzel

**Organisation:** KIT Department of Chemical and Process Engineering

**Part of:** Technical Supplement Course
Specialized Course I / Thermal Process Engineering

**Competence Certificate**
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**
Students know essential calculation methods for the dimensioning and verification of heat exchangers and are able to apply them to engineering problems. Students can independently use design methodologies for heat exchangers and perform the necessary calculations of heat transfer coefficients.

**Module grade calculation**
The grade of the oral examination is the module grade.

**Prerequisites**
None

**Content**
types of heat exchangers, mean logarithmic temperature, efficiency-NTU-methodology, cell methodology, design of heat exchangers, heat transfer in typical heat exchanger geometries, compact heat exchangers, microchannel heat exchangers

**Workload**
- Attendance time (Lecture): 30 h
- Homework: 50 h
- Exam Preparation: 40 h
5.55 Module: Heat Transfer II [M-CIWVT-103051]

| T-CIWVT-106067 | Heat Transfer II | 4 CR | Wetzel |

**Competence Certificate**
The examination is an oral examination with a duration of 20 minutes (section 4 subsection 2 number 2 SPO). Module grade is the grade of the oral examination.

**Competence Goal**
Students can deduce the basic differential equations of thermo-fluidynamics and know possible simplifications. They know different analytical and numerical solution methods for the transient temperature field equation in quiescent media and are able to use them actively. Students are able to apply these solution methods independently to other heat conduction problems such as the heat transfer in fins and needles.

**Module grade calculation**
The grade of the oral examination is the module grade.

**Prerequisites**
None

**Content**
Advanced topics in heat transfer:
Thermo-fluid dynamic transport equations, transient heat conduction; thermal boundary conditions; analytical methods (combination and separation of variables, Laplace transform); numerical methods (finite difference and volume methods); heat transfer in fins and needles

**Workload**
- Attendance time (Lecture): 30 h
- Homework: 50 h
- Exam Preparation: 40 h

Competence Certificate
The examination is an oral examination with a duration of 20 minutes (section 4 subsection 2 number 2 SPO).
The grade of the oral examination is the module grade.

Competence Goal
Students know the influences of mass and heat transfer resistances on the activity and selectivity of catalysts and on the occurrence of particle/film overheating and multiple operation states. They can develop catalyst designs to avoid transport resistances and high pressure drop. They are capable of selecting reactors and operating conditions for optimum utilization of the catalyst performance.

Prerequisites
None

Content
Influence of mass and heat transfer on the catalytic performance (activity, selectivity, overheating and multiple states); advanced catalyst formulation and shaping technologies for maximum performance; concepts for catalytic reactors; topical case studies on the development and application of heterogeneous catalysts.

Workload

- Attendance time (Lecture): 32 h
- Revision course: 28 h
- Homework: 90 h
- Exam Preparation: 30 h

### Mandatory

| T-CIWVT-110912 | High Temperature Process Engineering | 4 CR | Zarzalis |

### Competence Certificate

The examination is an oral examination with a duration of 30 minutes (section 4 subsection 2 number 2 SPO).

### Competence Goal

The students learn to identify the requirement of high temperature plants. Applying the balance equations for heat and mass and taking into account the relevant chemical kinetic processes they can derive the main process parameters. They are able to select the appropriate reactors and the plant components. Hence the students can evaluate different industrial processes and develop solutions for new problems in the area of high temperature process engineering.

### Module grade calculation

The grade of the oral examination is the module grade.

### Prerequisites

None

### Content

High temperature (HT) processes and plants; principles and technologies for heat generation; heat generation by combustion; heat transport by radiation; calculation of heat transfer in high temperature processes; Examples of HT plants

### Workload

- Attendance time (Lecture): 30 h
- Homework: 60 h
- Exam Preparation: 30 h

### Literature

Module: Hydrogen and Fuel Cell Technologies

**Responsible:** Prof. Dr.-Ing. Dimosthenis Trimis

**Organisation:** KIT Department of Chemical and Process Engineering

**Part of:**
- Technical Supplement Course
- Specialized Course I / Fuel Technology
- Specialized Course I / Combustion Technology
- Specialized Course I / Energy Process Engineering

**Credits:** 4

**Grading scale:** Grade to a tenth

**Recurrence:** Each summer term

**Duration:** 1 term

**Language:** German

**Level:** 4

**Version:** 1

**Mandatory**

| T-CIWVT-108836 | Hydrogen and Fuel Cell Technologies | 4 CR Trimis |

**Competence Certificate**

Learning control is an oral examination with a duration of about 20 minutes, SPO section 4, subsection 2.

**Competence Goal**

- The students are able to identify similarities and differences between different fuel cell systems.
- The students are able to assess different fuel cell systems based on the thermodynamic fundamentals.
- Students can describe chemical and process fundamentals of fuel cell systems and, based on this, name conditions for their use.
- The students are able to name and assess hydrogen production processes.
- The students are able to identify and assess specific problem areas of hydrogen and fuel cell technology.

**Module grade calculation**

The module grade is the grade of oral examination.

**Prerequisites**

None

**Content**

- Introduction and thermo-dynamic basics
- PEM fuel cells
- Molten carbonate fuel cells (MCFC)
- Solid oxide fuel cells (SOFC)
- Fuel cells for liquid and solid fuels
- Hydrogen as an energy carrier
- Hydrogen production
- Electrolysis
- Steam reforming
- Partial oxidation
- Liquid fuel reforming process
- Conversion/purification of carbon monoxide
- Desulphurization
- Fuel cell systems: peripheral components and integration.

**Workload**

- Attendance time: 30 h
- Homework: 60 h
- Exam Preparation: 30 h
Literature

5.60 Module: Industrial Aspects in Bioprocess Technology [M-CIWVT-105412]

**Competence Certificate**

The examination is an oral examination with a duration of about 15 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Students can discuss and analyze challenges and aspects in the biopharmaceutical industry.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

- Industrial Aspects on process development.

**Workload**

- Lectures: 30 h  
- Homework: 60  
- Exam preparation: 30
5.61 Module: Industrial Biocatalysis [M-CIWVT-104275]

**Responsible:** Dr. Jens Rudat  
**Organisation:** KIT Department of Chemical and Process Engineering  
**Part of:** Technical Supplement Course  
Specialized Course I / Technical Biology

### Credits
- **6**

### Grading scale
- Grade to a tenth

### Recurrence
- Each winter term

### Duration
- 1 term

### Language
- German

### Level
- 4

### Version
- 1

### Mandatory

| T-CIWVT-108813 | Industrial Biocatalysis | 6 CR | Rudat |

### Competence Certificate
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

### Competence Goal
The students are enabled to critically compare and evaluate different processes leading to industrially relevant products (chemo- vs. biocatalysis as well as various biocatalytic procedures among each other).

### Module grade calculation
The grade of the oral examination is the module grade.

### Prerequisites
None

### Content
Current developments of enzyme-catalyzed production as well as already established procedures:

- Pharma industries (synthesis and modification of drugs)
- Food and feed industries (enzymatic conversion of ingredients, production of flavour enhancers)

In addition to the presentation of enzymatic reactions and their molecular-biological optimization, also aspects of process engineering are discussed such as choice and design of solvents/reaction media, downstream processing, as well as economic and ecologic factors.

### Workload

- Attendance time (Lecture): 45 h  
- Homework: 90 h  
- Exam Preparation: 45 h

### Literature

- Recent publications in relevant journals, e.g. Applied Microbiology and Biotechnology
5.2 Module: Industrial Crystallization [M-CIWVT-104364]

**Responsible:** Prof. Dr.-Ing. Matthias Kind  
**Organisation:** KIT Department of Chemical and Process Engineering  
**Part of:** Technical Supplement Course  
Specialized Course I / Thermal Process Engineering  
Specialized Course I / Product Design

<table>

<td>4</td>
<td>1</td>
</tr>
</tbody>
</table>

**Mandatory**

| T-CIWVT-108925 | Industrial Crystallization | 6 CR | Kind |

**Competence Certificate**
The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**
Acquisition of deep understanding of processes using the example of industrial crystallization. Transfer of this understanding into a numerical model.

**Module grade calculation**
The grade of the oral examination is the module grade.

**Prerequisites**
None

**Content**
Crystallization processes and apparatus; Solubility, nucleation and growth kinetics; Modeling and Simulation of the particle size distribution in continuous and batch operated crystallizers; Numerical methods for solving the coupled mass and population balance; Apparatus design, determination of the principal dimensions of forced circulation crystallizers (python, excel or other programming language).

**Workload**
- Attendance time (Lecture): 40 h  
- Homework: 70 h  
- Exam Preparation: 70 h

**Literature**
- Gnielinski, V.; Mersmann, A.; Thurner, F. Verdampfung, Kristallisation, Trocknung; Vieweg, 1993  
- Randolph, A. D.; Larson, M. A. Theory of particulate processes; Academic Press, 1971
Competence Goal
Students will be able to explain and describe the basic methods of genetic engineering mentioned above, such as methods of DNA recombination, sequencing and PCR; manipulation of gene expression in prokaryotes; production of heterologous proteins in prokaryotic and eukaryotic hosts; targeted mutagenesis and protein design; and metabolic engineering. The methods can be applied to similar problems and proposed solutions can be developed.

In the preparation of the seminar presentation, the students show that texts describing such methods can be analyzed and the industrial applicability of these methods can be critically discussed.

Prerequisites
None

Content
Lecture: Fundamentals of genetic engineering with respect to its industrial applicability; methods of DNA recombination, sequencing and PCR; manipulation of gene expression in prokaryotes; production of heterologous proteins in prokaryotic and eukaryotic hosts; targeted mutagenesis and protein design; genetically modified microorganisms in industry; production of pharmaceutically active proteins such as e.g. Insulin or interferon, antibiotic production, molecular diagnostics, production of antibodies, vaccines and therapeutics; metabolic engineering - optimization of substance production by genetic engineering methods.

Seminar: 10 min Lecture on a current example from industrial genetic engineering. Topics will be provided.
Module: Innovation Management for Products & Processes in the Chemical Industry [M-CIWVT-104397]

**Responsible:** Dr. Claudius Neumann

**Organisation:** KIT Department of Chemical and Process Engineering

</table>

**Competence Certificate**
The examination is a written examination (multiple choice) with a duration of about 30 minutes (section 4 subsection 2 number 1 SPO).
The grade of the written examination is the module grade.

**Competence Goal**
The students get to know the structures of the chemical industry.
They receive an insight into the interpretation of business figures and their connection with innovations.
They know how different factors influence innovation strategies.
They get to know the expiry of an innovation process.
The students have the opportunity to utilize the presented methods and tackle problems which are close to industrial application.
Besides the students receive an insight into the work of an innovation management (excursion).

**Prerequisites**
None
Content

Background
The chemical industry had to adapt to the economic conditions of globalization during the last decades. It has been aligned to global markets thus changing the formerly scientific-technology oriented R&D. Today the work in industrial product & process development requires skills besides a thorough knowledge about chemistry and technology; a good general economic understanding combined with the competence to manage a complex system based on business figures. This competence allows scientifically and technology educated scientists and engineers to align chemical product and process development within the Innovation Strategy to the strategic business plan. It is implemented within the Innovation Process and monitored and managed by characteristic performance indicators. Thus, the economic benefit of innovation can be quantified using quantitative measures.

Scope of the lecture
The lecture intends to provide the fundamentals for understanding Innovation Management and to utilize them by tackling examples close to industrial application. The course addresses the following key questions:

What are the structures in the chemical industry?
What are business figures? How are they interpreted and applied in terms of innovation?
What are customers? How do they influence innovation?
How do marketing and product management determine innovation?
What is a business strategy? How is it connected to the innovation strategy?
What is the Innovation Process? How is it managed?
What is Innovation Portfolio Management? Why is it needed for successful innovation?
What are state of the art Innovation Management practices in the chemical industry?

Visit
The lecture includes a one day visit to the Evonik Site Hanau for experiencing current Innovation Management practices from discussions with managers in the chemical industry.

Workload
- Attendance time (Lecture): 30 h (Block lectures 4 days)
- Homework: 60 h
- Exam Preparation: 30 h
Module: Instrumental Analytics [M-CIWVT-104560]

Responsible: apl. Prof. Dr. Gisela Guthausen
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
          Specialized Course I / Mechanical Process Engineering
          Specialized Course I / Water Technology

Credits 4

Level 4
Version 1

Mandatory
T-CIWVT-106837 Instrumental Analytics 4 CR Guthausen

Competence Certificate
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

Competence Goal
The students are familiar with the important methods of modern instrumental analytics and their range of application. They can explain and critically compare the underlying physical principles of the methods. Students are able to develop solution concepts for analytical problems and to choose adequate methods to answer a specific question.

Module grade calculation
The grade of the oral examination is the module grade.

Prerequisites
None

Content
Introduction to selected methods of modern instrumental analysis, as for example optical methods and magnetic resonance methods. Imaging techniques such as MRI, µCT and optical microscopy (CLSM and OCT) and fundamentals of data and image analysis are presented. The focus is on a clear presentation of the physico-chemical fundamentals and the underlying principles as well as the fields of application.

Workload
- Attendance time (Lecture): 30 h
- Homework: 30 h
- Exam Preparation: 60 h

Literature
References are given in the respective context in the lecture.

Competence Certificate
The examination is a written examination with a duration of 60 minutes (section 4 subsection 2 number 1 SPO). The grade of the written examination is the module grade.

Competence Goal
Students are introduced to the kinetics of molecular transport and reaction. They learn about catalysis as a kinetic phenomenon. They are able to analyze and interpret the kinetics of homogeneously, enzymatically and heterogeneously catalyzed processes.

Prerequisites
None

Content
Kinetic theory of gases; molecular transport in gases and liquids; diffusivity in porous solids; molecular interactions and Lennard-Jones potential; kinetics of homogeneous reactions; adsorption at solid surfaces and sorption kinetics; elements of the kinetics of catalyzed reactions (homogeneous acid-base, enzymatic and heterogeneous catalysis).

Workload
- Attendance time (Lecture): 42 h

**Competence Certificate**

Learning Control is an oral examination with a duration of about 20 minutes (SPO section 4 subsection 2).

**Competence Goal**

The students are enabled to balance modern processes for the production of liquid fuels and to put them into context of a modern refinery. Actual alternative processes for the production of liquid fuels, their advantages and disadvantages have to be understood.

**Module grade calculation**

Grade of the Module ist the grade of oral examination.

**Prerequisites**

None

**Content**

Introduction to Chemical Fuels (resources, global and regional consumption, CO2 emissions, characterization of raw materials and products, overview of conversion processes; petroleum refining: characterization of crude oils and refinery products, physical separation processes, chemical conversion processes (cracking, hydrotreating, reforming, H2 production etc); liquid fuels from renewable sources (biomass, renewable electricity); gaseous fuels; gasification of solid fuels; economic aspects and perspectives.

**Workload**

- Lectures and Exercises: 45 h
- Homework: 75 h
- Exam preparation: 60 h

**Literature**

**Mandatory**

| T-CIWVT-108146 | Materials and Processes for Electrochemical Storage | 4 CR | Tübke |

### Competence Certificate

The examination is an oral examination with a duration about 30 minutes (section 4 subsection 2 number 2 SPO).

### Competence Goal

Students know the basic principles of electrochemical storage devices as well as the electrochemical basics. They are able to calculate the expected properties and operating parameters for given material combinations of electrochemical cells. Students are also able to evaluate appropriate materials and engineering processes for future battery chemistries in a critical way and are able to indicate possible application fields. For different mobile or stationary applications of electrochemical storage devices, students are able to select a suitable type of electrochemical energy storage device and are capable to configure a suitable system configuration.

### Module grade calculation

The grade of the oral examination is the module grade.

### Prerequisites

None

### Content

**Electrochemical basics**
Introduction to electrochemistry, electrochemical potentials, concentration dependence, electrochemical methods

**Fundamentals of electrochemical storage systems**
Structure and functioning of primary and secondary batteries
Volta battery / Leclanche-element, alkaline, zinc-carbon, lead-acid, zinc-air, nickel-cadmium, nickel-metal hydride, redox flow batteries, high-temperature batteries, lithium ion batteries, new storage systems (e.g. Li-O, Li-S)
Structure and function of Super capacitors, hybrid systems

**Materials and methods for electrochemical storage**
Interkalation and conversion electrodes, polymer and ceramic separators
Electrolyte additives and electrode coatings
Liquid and solid electrolyte systems
Conducting materials (metals, modified plastics), housing materials

**Design of electrochemical storage systems**
Cells and battery development, temperature control, construction and connection technology
Housing and application integration

**Operation and applications of electrochemical storage systems**
Battery management, determination of operating parameters, aging behavior of batteries, battery selection for specific application profiles

### Workload

- Attendance time (Lecture): 30 h
- Homework: 80 h
- Exam Preparation: 10 h
### Module: Measurement Techniques in Chemical Processing [M-CIWVT-104490]

**Responsible:** Dr.-Ing. Steffen Peter Müller  
**Organisation:** KIT Department of Chemical and Process Engineering  
**Part of:** Technical Supplement Course  
Specialized Course I / Chemical Process Engineering

**Competence Certificate**
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**
Students are capable to discuss various measurement methods and are able to compare and analyse different measurement principles.  
Due to the mentioned aims, students are able to criticise and rate various measurement methods.

**Module grade calculation**
The grade of the oral examination is the module grade.

**Prerequisites**
None

**Content**
Theory and practice of online measurement methods e.g.: pressure, temperature, pH value and material properties for example: density.

**Workload**
- Attendance time (Lecture): 22.5 h
- Homework: 26 h
- Exam Preparation: 80 h

**Mandatory**

| T-CIWVT-108837 | Measurement Techniques in the Thermo-Fluid Dynamics | 6 CR | Trimis |

**Competence Certificate**

Learning Control is an oral examination with a duration of about 20 minutes (section 4 subsection 2 SPO).

**Competence Goal**

- The students are able to plan an experiment, select the appropriate quantities to be measured and identify the appropriate dimensionless numbers for the universal representation of the results.
- The students have a thorough understanding of several advanced measuring techniques used for basic research in thermofluids. They are able to select the most appropriate technique for an experimental study.
- The students can assess the accuracy and limitations of measuring techniques quantitatively.
- The students understand the different time scales of involved phenomena and the stochastic nature of experiments, measuring techniques and turbulent flows. They are able to accurately process acquired measurement data in the time and in the spectral domain.

**Module grade calculation**

Grade of the module is the grade of the oral examination.

**Prerequisites**

None

**Content**

- Design of experiment and dimensional analysis
- Flow visualization (light sheet techniques, shadowgraphy, Schlieren and interferometry)
- Laser Doppler Anemometry
- Phase Doppler Anemometry
- Particle Image Velocimetry
- Laser Induced Fluorescence
- Absorption spectroscopy
- Overview of further techniques
- Data processing for turbulent flows in the time and spectral domain

**Workload**

- Lectures and Exercises: 45 h
- Homework: 25 h
- Exam Preparation: 110 h

**Literature**

5.75 Module: Membrane Reactors [M-CIWVT-105663]

**Competence Certificate**

Written exam, 90 min
Ungraded learning control as a prerequisite for the exam

**Competence Goal**

Students have a fundamental knowledge on membrane technology in water and waste water treatment. They learn how the different membrane systems (reverse osmosis, nanofiltration, ultrafiltration, microfiltration, and dialysis) have to be applied to produce a certain water quality. They are able to design such systems.

**Module grade calculation**

Grade of the module is the grade of oral examination.

**Prerequisites**

None

**Content**

- The solution-diffusion model
- Concentration polarization and the consequences for membrane module design.
- Membrane production and properties.
- Membrane configuration and design
- Membrane systems for desalination and brackish water treatment
- Membrane bio reactors for waste water treatment
- Biofouling, scaling and prevention of both
- Excursions with introduction: applied membrane processes in waste water disposal and drinking water supply.

**Recommendation**

Module „Water Technology (PA221)“

**Workload**

Attendance time: Lectures: 30 h; Exercises/ excursions: 15 h
Preparation/ follow-up: 60 h
Examination + exam preparation: 75 h

**Literature**

**Competence Certificate**

Learning control is an oral examination with a duration of about 20 minutes according to section 4, subsection 2 No. 2 SPO.

**Competence Goal**

Students develop a general understanding of the environmental analysis and get familiar with the tools applied for this purpose. They gain a detailed knowledge about the problem of organic micropollutants in the aquatic environment. They are able to propose the methodology of their identification and quantification in the various aqueous matrices, as well as to suggest the ecotoxicological tools to assess their impact on the environment. They understand the limitations of conventional biological treatment of wastewater with respect to micropollutants removal, and they propose the alternatives applied as tertiary treatment. They can distinguish the advantages and disadvantages of selected chemical oxidative methods used for (waste)water treatment.

**Module grade calculation**

Grade of the module is the grade of the oral examination.

**Prerequisites**

None

**Content**

Introduction to environmental analysis, basic tools applied in environmental analysis, development of analytical method. Classification, occurrence and fate of micropollutants in the aquatic environment. Water sampling, sample preparation, extraction techniques used for determination of micropollutants. Quantification of micropollutants using liquid chromatography coupled with mass spectrometry. Ecotoxicological tools used for water quality assessment. Techniques applied for micropollutants' removal - biological, physical and chemical. Advanced oxidation processes – supporting techniques for an enhancement of water quality.

#### Competence Certificate
Learning control is an oral individual examination with a duration of 30min according SPO section 4, subsection 2.

#### Competence Goal
The students are able to explain the fundamental laws and the derived physical principles of mixing, stirring and the particle agglomeration and not only to relate them to the principally suited processes but also to selected apparatuses. They have the ability to apply the relationship between product, operation and design parameters to different processes. They can analyse the related process engineering problems with scientific methods and give alternative problem solution proposals. On the basis of their skills they can evaluate whether and if applicable a promising process can be designed.

#### Module grade calculation
The module grade is the grade of oral examination.

#### Prerequisites
None

#### Content
Fundamentals and applications; statistic methods to characterize the mixing quality; characterisation of the flow properties of bulk solids and liquids; introduction into dimension analysis to achieve characteristic numbers important for mixing problems; scale-up procedures for specific mixing processes; solids mixing processes like free-fall, pusher and intensive mixers, fluidised bed, air jet, and turnover mixers; pile mixing techniques; fluid-mixing processes like homogenisation, suspending, emulsifying, gassing and heat transfer; static mixers and kneaders. adhesion forces between particles; agglomerate properties: characterisation of agglomerates regarding size, size distribution, porosity, density, stability, flow behaviour and instantiation behavior; agglomeration processes like roll-agglomeration, mixing agglomeration, fluidized bed and spray agglomeration, agglomeration in liquids by means of coagulation, flocculation or changed wettability, press agglomeration by means of tableting, roller compaction or extrusion and post hardening of agglomerates by means of sintering.

#### Workload
Lectures: 3 SWS/ 45 h  
Homework: 75 h  
Exam preparation: 60 h  
Total: 180 h
### 5.83 Module: Modern Analysis Techniques for Process Optimization [M-CIWVT-104387]

**Prerequisites**

Process Technology and at least three further modules of the advanced fundamentals has to be passed. The internship has to be passed. The examination board decides on exceptions.

(Compare SPO section 14 subsection 1)

**Modeled Conditions**

The following conditions have to be fulfilled:

1. You have to fulfill 3 of 10 conditions:
   1. The module M-CIWVT-103064 - Selected Formulation Technologies must have been passed.
   2. The module M-CIWVT-104386 - Integrated Bioprocesses must have been passed.
   3. The module M-CIWVT-104384 - Biotechnological Production must have been passed.
   4. The module M-CIWVT-103065 - Biopharmaceutical Purification Processes must have been passed.
   5. The module M-CIWVT-103072 - Computational Fluid Dynamics must have been passed.
   6. The module M-CHEMBIO-104486 - Physical Chemistry (incl. Lab) must have been passed.
   7. The module M-CIWVT-103058 - Thermodynamics III must have been passed.
   8. The module M-CIWVT-104383 - Kinetics and Catalysis must have been passed.
   9. The module M-CIWVT-104378 - Particle Technology must have been passed.
   10. The module M-CIWVT-104377 - Thermal Transport Processes must have been passed.

2. The module M-CIWVT-104374 - Process Technology must have been passed.
3. The module M-CIWVT-104527 - Internship must have been passed.

**Workload**

Homework: 900 h

### Version
1

### Mandatory
T-CIWVT-108815 Multiphase Reaction Engineering 10 CR Kraushaar-Czarnetzki

### Competence Certificate
The examination is an oral examination with a duration of 40 minutes (section 4 subsection 2 number 2 SPO).
The grade of the oral examination is the module grade.

### Competence Goal
Students know the film model and are able to apply it for the calculation of mass transport effects in reacting multiphase systems. They know technical two- and three-phase reactors with their fields of application and their limits. For multiphase reactors with well-defined properties, they are able to design reactor dimensions and to calculate suitable process conditions.

Students are familiar with the functions of heterogeneous catalysts and are able to apply kinetic models to interpret catalytic effects. They know technical manufacturing techniques and can discuss their impact on catalyst properties. Furthermore, students know important physical-chemical and functional characterization methods, and they are able to use characterization data for a qualified assessment of the applicability and performance of heterogeneous catalysts.

### Prerequisites
None

### Content
Theory of mass transfer and reaction in multiphase reacting systems (film model); technical reactors for two-phase systems (gas-liquid, liquid-liquid, gas-solid); reactors for three-phase systems.

Functions and kinetic effects of catalysts; structure, manufacturing and forming/shaping of heterogeneous catalysts; physico-chemical properties (composition, morphological and mechanical properties, specific total and partial surface areas, porosity and pore size distribution, surface chemistry) and their characterization; functional characterization (activity, selectivity).

### Workload
- Attendance time (Lecture): 70 h
- Revision course: 30h
- Homework: 120 h
- Exam Preparation: 80 h

### Literature
- Kraushaar-Czarnetzki: Skript "Chemische Verfahrenstechnik II";
- Kraushaar-Czarnetzki: Foliensammlung "Heterogene Katalyse I".

Alle Lernmaterialien und Hinweise auf Spezialliteratur sind auf der Lernplattform ILIAS (https://ilias.studium.kit.edu) abgelegt.
### Competence Certificate

The examination is an oral examination with a duration of about 30 minutes in case of a single module examination and 20 minutes in case of an overall examination of the specialized course (section 4 subsection 2 number 2 SPO).

### Competence Goal

Students develop an understanding of the correlation between structure of nanoscaled systems and their physical properties. Additionally, they understand how process parameters in the synthesis of nanoscaled particle systems determine the resulting particle structure.

Based on the knowledge of the structure-function-relationships and of the synthesis routes, the students can develop strategies for the systematic generation and optimization of nanoparticulate systems for specific applications.

### Module grade calculation

The module grade is the grade of oral examination.

### Prerequisites

None

### Content

- Technical and historical classification of the lecture content
- Methods for visualization of nanoscaled objects and structures
- Description and physical basis of specific properties of nanoscaled particles (and other structures/shapes)
  - Size dependency of surface energy
  - Modification of the phase transition temperature (compared to the bulk phase)
  - Mechanical properties
  - Optical properties
  - Electrical properties
- Methods for synthesizing nanoscaled particle systems in the gas phase with well-defined properties
- Relevant process parameters for the adjustment of
  - Particle size (primary particle and agglomerate size)
  - Agglomeration state
  - Agglomerate strength
  - Structure/phase of the particle material
  - Chemical structure of particle surface
  - Multi-level structuring (core-shell, nanoparticles on support structures)

### Workload

- Attendance time (Lecture): 45 h
- Homework: 75 h
- Exam Preparation: 60 h
5.87 Module: NMR for Engineers [M-CIWVT-104401]

**Responsible:** apl. Prof. Dr. Gisela Guthausen

**Organisation:** KIT Department of Chemical and Process Engineering

**Competence Goal**
Knowledge about NMR and their applications, basic understanding of the phenomena

**Prerequisites**
None

**Content**
An overview of applications of nuclear magnetic resonance (NMR) will be given together with the basic description of this analytical tool. In the focus of the lectures are typical applications of NMR in chemical and bio engineering. The understanding of this versatile analytical method will be developed on the basis of dedicated examples.

**Workload**
- Attendance time (Lecture): 30 h
- Revision course: 30 h
- Internship: Attendance Time 30 h, Preparation Time 30 h
- Exam Preparation: 60 h

**Literature**
Lehrbücher Kimmich und Callaghan, weitere Literatur wird jeweils in der Vorlesung angegeben.

<td>T-MACH-105228 Organ Support Systems</td>
</tr>
</tbody>
</table>

**Competence Certificate**
A performance assessment is held in form of a written examination of 45 minutes.

**Competence Goal**
Students have comprehensive knowledge of the functioning of support systems and their components (e.g. sensors, actuators) for different human organs (e.g. heart, kidney, liver, eye, ear, locomotor system). They know the physical basics, the technical solutions and the essential aspects of these medical technology systems and their current limitations. Furthermore, they know bioreactors and other methods of using the body's own cells to support organs (tissue engineering). Furthermore, they have comprehensive knowledge of organ transplantation and its limitations.

**Module grade calculation**
The module grade is the grade of the written exam.

**Prerequisites**
none

**Content**
Hemodialysis, liver dialysis, heart-lung machine, artificial hearts, biomaterials, definition and classification of organ support and organ replacement, hearing prostheses, visual prostheses, exoskeletons, neuroprostheses, endoprostheses, tissue engineering.

**Recommendation**
The content of module MMACH-105235 complements this lecture.

**Workload**
1. Attendance time Lecture: 15 * 2h = 30h
2. Pre- and postprocessing time Lecture: 15 * 3h = 45h
3. Exam preparation and attendance exam: 45h

Total: 120h = 4 LP

Module: Particle Technology [M-CIWVT-104378]

Responsible: Prof. Dr.-Ing. Achim Dittler
Organisation: KIT Department of Chemical and Process Engineering
Part of: Advanced Fundamentals (CIW)
Technical Supplement Course

Credits: 6
Grading scale: Grade to a tenth
Recurrence: Each summer term
Duration: 1 term
Language: German
Level: 5
Version: 1

Competence Certificate
The examination is a written examination with a duration of 120 minutes (section 4 subsection 2 number 1 SPO).
The grade of the written examination is the module grade.

Competence Goal
Students develop an advanced understanding of properties & behavior of particles and particulate systems in important engineering applications; they are able to use this understanding for calculations and design of selected processes

Prerequisites
None

Content
Description and behavior of particles and particulate systems in engineering applications; selected unit operations in particle technology.

Workload
- Attendance time (Lecture): 45 h
- Homework: 90 h
- Exam Preparation: 45 h

Learning type
22975 Partikeltechnik Lecture
22976 Übung zu Partikeltechnik Exercises

**Competence Certificate**

The examination consists of two Parts:

1. written examination with a duration of 60 minutes (section 4 subsection 2 number 1 SPO)
2. practical course, ungraded study achievement (§ 4 Abs. 3 SPO)

**Competence Goal**

V+Ü: Students understand the main basics of quantum mechanics which are necessary for the application of spectroscopic methods. They can understand and apply selected spectroscopic methods for the evaluation, analysis and solution of problems in engineering sciences.

They understand the thermodynamic formalism for the description of interfacial phenomena. They are able to analyze wetting and dewetting problems, nucleation phenomena as well as ad- and desorption within this formalism.

They can understand and analyze electrochemical cells within thermodynamics of heterogeneous systems with charged particles. They understand transport phenomena of charged particles in solutions. They can apply the Debye-Hückel-Theory to thermodynamic and transport phenomena. Using these knowledges they are able acquire and understand more complex electrochemical systems like batteries, fuel cells and corrosion processes.

P: Within the practical course they work on selected projects. Beginning with preparing working steps, over the experimental procedure, to the evaluation of the received data and the written presentation they deepen their knowledge in the field of selected experimental examples. They are able to interpret the results with respect to scientific significance and accuracy.

**Prerequisites**

None

**Content**

V+Ü: description of fundamentals and application of physico-chemical subjects relevant for chemical engineering sciences:

- Basics of quantum mechanics and its application to spectroscopy, FTIR-absorption spectroscopy, UV-VIS spectroscopy, Raman spectroscopy, NMR spectroscopy;
- Thermodynamics of interfaces, Gibbs' adsorption isotherm, adsorption at solid surfaces, Langmuir- and BET adsorption, nucleation theory;
- Electrochemistry, thermodynamics of heterogeneous systems with charged particles, electrochemical cells, Debye–Hückel theory, ionic migration in an electric field, technical application of electrochemistry;
- P: performance of selected experiments in the field of physical chemistry, improvement of theoretical knowledge focusing on selected topics.

**Workload**

- Attendance time (V+Ü): 3 SWS; 45 h
- Homework (V+Ü): 45 h
- Exam Preparation: 30 h
- Practical Course (4 times): 16 h
- Practical Course (pre- and postprocessing): 44 h
Literature

Mandatory
T-CIWVT-106103  Physical Foundations of Cryogenics  6 CR  Grohmann

Competence Certificate
The examination is an oral examination with a duration of 30 minutes (section 4 subsection 2 number 2 SPO).

Competence Goal
Understanding of the mechanisms of entropy generation, and the interaction of the first and the second law in thermodynamic cycles; understanding of cryogenic material properties; application, analysis and assessment of real gas models for classical helium I; understanding of quantum fluid properties of helium II based on Bose–Einstein condensation, understanding of cooling principles at lowest temperatures.

Module grade calculation
The grade of the oral examination is the module grade.

Prerequisites
None

Content
Relation between energy and temperature, energy transformation on microscopic and on macroscopic scales, physical definitions of entropy and temperature, thermodynamic equilibria, reversibility of thermodynamic cycles, helium as classical and as quantum fluid, low-temperature material properties, cooling methods at temperatures below 1 K.

Workload
- Attendance time (Lecture): 45 h
- Homework: 45 h
- Exam Preparation: 90 h

**Competence Certificate**

The examination is an oral examination with a duration of 20 minutes (section 4 subsection 2 number 2 SPO) about experiments.

The grade of the oral examination is the module grade.

**Competence Goal**

The students are able to analyze results of combustion experiments and to assess the measurements methods.

**Prerequisites**

None

**Content**

The laminar flame speed is experimentally determined, stability limits of combustion systems are investigated and the process of combustion is analyzed. Different measurement techniques (e.g. exhaust gas probes or optical measurement techniques) are applied.

**Annotation**

Dates of experiments by arrangement. Please contact the responsible person (stefan.harth@kit.edu) for registration by Mai the 15th by the latest.

**Workload**

- Experiments: 30 h (3 - 4 experiments depending on the complexity of the used test stands)  
- Homework, test records: 50 h  
- Exam preparation: 40 h
Module: Practical Course in Food Process Engineering [M-CIWVT-104257]

**Responsible:** Prof. Dr.-Ing. Heike Karbstein

**Organisation:** KIT Department of Chemical and Process Engineering

**Part of:**
- Technical Supplement Course (Usage from 10/1/2019)
- Specialized Course I / Food Process Engineering (Usage from 10/1/2019)

### Election regulations
Elections in this module must be complete.

| Election block: Practical Course in Food Process Engineering (at most 1 item) |
|---|---|---|---|---|---|---|
| T-CIWVT-109128 | Introduction to Sensory Analysis with Practice | 2 CR | Eckert, Scherf |
| T-CIWVT-109129 | Seminar of Food Processing in Practice with Excursion | 2 CR | Karbstein |
| T-CIWVT-110577 | Research Lab Food Process Engineering | 2 CR | Karbstein |
| T-CIWVT-110578 | Internship Food Process Engineering | 2 CR | Karbstein |

### Competence Goal
Students are able to use their academic knowledge on the processing and characterization of food products to evaluate industrially relevant food processes and techniques. In teams, they can discuss and solve complex tasks that concern the production and evaluation of food products and that stem from industrial applications. Students have the skills to present the results of their work in a scientific manner.

### Prerequisites
None

### Content
One of the following practical courses can be selected:

**Introduction to Sensory Analysis with Practice**

Fundamentals of Sensory-Physiological Methods: individual sense, basic tastes, unification and standardization, requirements for panel test, training of panel, methods of sensory analysis: difference testing, triangle test, duo-trio test, descriptive tests, evaluation test with scale, etc.

**Seminar of Food Processing in Practice with Excursion**

Current challenges in the industrial production of selected food products will be discussed in small groups, and presented to the whole class. The seminar will be accompanied by an excursion to the relevant food processing plants.
Module: Practical Course in Water Technology [M-CIWVT-103440]

**Responsible:**
Dr. Gudrun Abbt-Braun  
Dr. Andrea Hille-Reichel  
Prof. Dr. Harald Horn

**Organisation:**
KIT Department of Chemical and Process Engineering

**Part of:**
Technical Supplement Course  
Specialized Course I / Water Technology (Usage from 10/1/2019)

<td>Excursions: Water Supply</td>
<td>1 CR</td>
</tr>
</tbody>
</table>

**Competence Certificate**

The learning control consists of:

- Laboratory: 6 Experiments including entrance test, protocol; presentation about a selected experiment (about 15 minutes); final test (SPO section 4, subsection 2 No. 3)
- Excursions, protocols about excursions (ungraded)

**Competence Goal**

Students can explain the most important processes in water treatment. They are able to do calculations, and to compare and interpret data. They learn how to use different methods, and to interpret different processes.

**Module grade calculation**

Module grade is the grade of the laboratory and is formed as follows:

A total of 150 points can be achieved:

- maximum 60 points for the experiments (10 each)
- maximum 15 points for the presentation
- maximum 75 points for the final certificate

At least 80 points must be achieved in order to pass.

**Prerequisites**

Module 'Water Technology (PA221)'

**Modeled Conditions**

The following conditions have to be fulfilled:

1. The module M-CIWVT-103407 - Water Technology must have been started.

**Content**

6 different experiments out of: equilibrium study of the calcium carbonate system, flocculation, adsorption, oxidation, atomic absorption spectroscopy, ion chromatography, liquid chromatography, sum parameter, and an oral presentation of the student. In addition, excursions to two different treatment plants (waste water, drinking water).

**Workload**

Attendance time: Introduction and presentation (4 h), 6 Experiments (4 h each), 2 excursions: 36 h  
Preparation/follow-up, protocols, presentation: 50 h  
Examination + exam preparation: 34 h
Literature

- Vorlesungsskript im ILIAS

**Mandatory**

| T-MACH-10211 | Principles of Ceramic and Powder Metallurgy Processing | 4 CR | Schell |

**Competence Certificate**

Learning control is an oral examination with a duration of about 25 minutes, SPO section 4 subsection 2.

**Competence Goal**

The students know the basics of characterization of powders, pastes and suspensions. They have a fundamental understanding of the process technology for shaping of particulate systems. They are able to use these fundamentals to design selected wet- and dry forming processes.

**Module grade calculation**

Module grade is the grade of oral examination.

**Prerequisites**

None

**Content**

The course covers fundamentals of the process technology for shaping of ceramic or metal particle systems. Important shaping methods are reviewed. The focus is on characterization and properties of particulate systems, and, in particular, on process technology for shaping of powders, pastes, and suspensions.

**Recommendation**

Knowledge of general material science is required.

**Workload**

- Attendance Time: 30 h
- Homework: 45 h
- Exam preparation: 45 h

T-MACH-105235 Principles of Medicine for Engineers 4 CR Pylatiuk

Competence Certificate
A performance assessment is held in form of a written examination of 45 minutes.

Competence Goal
Students have a comprehensive understanding of the functioning and anatomical construction of organs, which are assigned to different medical disciplines. Furthermore, they know the physical basics, the technical solutions and the essential aspects of the application of medical technology procedures in diagnostics and therapy. They are familiar with common clinical pictures in the different medical disciplines and their relevance in health care. Through their acquired knowledge, students can communicate with physicians about medical-technical procedures and assess mutual expectations more realistically.

Module grade calculation
The module grade is the grade of the written exam.

Prerequisites
none

Content
Definition of disease and health and history of medicine, evidence-based medicine" and personalized medicine, nervous system, conduction, musculoskeletal system, cardiovascular system, anesthesia, respiratory system, sensory organs, gynecology, digestive organs, surgery, nephrology, orthopedics, immune system, genetics.

Recommendation
The content of module MMACH-105228 complements this lecture.

Workload
1. Attendance time Lecture: 15 * 2h = 30h
2. Pre- and postprocessing time Lecture: 15 * 3h= 45h
3. Exam preparation and attendance exam: 45h

Total: 120h = 4 LP

Competence Certificate
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO). The grade of the oral examination is the module grade.

Competence Goal
The students are able to systematically assess the risks of technical systems, assess the effects of possible accidents and define suitable safety measures. The lecture is divided into thematic blocks. Lecture block 01 is an introduction to the topic: Lecture blocks
1. Introduction
2. risk management
3. hazardous substances
4. Exothermic Chemical Reactions
5. safety devices
6. effluent systems
7. Dispersion of hazardous substances
8. PLT protective devices
9. explosion protection
10. electrostatics

Prerequisites
None

Content
Introduction to safeguarding processes and plants to protect people and the environment from potential hazards of technical plants in the chemical, petrochemical, pharmaceutical and oil and gas sectors. Risk management can be used to prevent incidents and limit the impact of events. This includes topics such as technical safety of plants, risk management, prevention of hazards from substances and dangerous chemical reactions, design of protective devices for emergency relief such as safety valves, bursting discs and downstream containment devices. Modern process control systems, emission and dispersion of hazardous substances in the atmosphere, and explosion and fire protection.

Workload
- Attendance time (Lecture): 30 h

Competence Certificate
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

Competence Goal
Skills to develop holistic processes for product design. Knowledge about task of engineers in process industry.

Module grade calculation
The grade of the oral examination is the module grade.

Prerequisites
None

Content
Teaching of methods and creating awareness about boundary conditions related to scientific and systematic engineering approaches in process development. In Bachelorstudies and during basic studies in process technology focus was laid on the description/analysis of different physical phenomena. Their linkage in the course of selection, dimensioning, interconnection and optimization of apparatuses/ machines and their integration during process development will be outlined and illustrated by a variety of real-life examples.

Workload
- Attendance time (Lecture): 30 h
- Homework: 60 h
- Exam Preparation: 30 h

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO). The grade of the oral examination is the module grade.

**Competence Goal**

Students are able to sum up and explain equilibrium and kinetic equations relevant for chromatography modeling. They are able to explain the methods used for determination of equilibrium and kinetic parameters and can discuss examples. They are familiar with the principle of complex downstream processes, e.g. simulated moving beds, and can explain the differences to conventional chromatography. Using commercial software they are able to simulate chromatography processes and to analyze the results. On this basis they can optimize process parameters and fit them in order to meet given targets such as purity or yield. They can evaluate different processes and choose the variant for a given task.

**Prerequisites**

None

**Content**

Fundamentals and practical examples of chromatography modeling.

Design rules for Simulated Moving Beds, Design of Experiments (DOE)

**Competence Certificate**

The module exam consists of three partial performances:

- A written examination of 180 minutes according to § 4 (2) Nr. 1 SPO
- An internship in process and plant engineering, ungraded study achievement according to § 4 (3) SPO
- An admission exam to the practical course process and plant engineering, ungraded study achievement according to §4 (3) SPO

Module grade is the grade of the written exam.

**Competence Goal**

The students are enabled to analyze technical processes and plants and describe the process on the basis of P&I-diagrams. They are capable to apply their engineering and process engineering basics on industrial processes and plants. They are prepared to design and evaluate process steps and process chains based on simplistic assumptions and characteristic numbers.

**Prerequisites**

The initial exam is precondition for the practical course.

**Content**

- Engineering basics: P&I-diagram, flowsheet simulation, process optimization, safety, economical evaluation
- Application of engineering basics in practical course
- Process engineering in technical application, industrial production processes: e.g. steamcracker, methanol, sulfuric acid, ammonia, cement, pulp

**Workload**

- Attendance time: 43 h
- Homework: 87 h
- Exam preparation: 80 h
- Internship: Attendance time: 9 h + preparation and follow-up time: 21 h

**Mandatory**

| CR | T-CIWVT-108997 | Processes and Process Chains for Renewable Resources | 6 CR |

**Competence Certificate**
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**
The students become able to:

- understand and assess the technical background of the key elements of process chains for the utilization of renewable resources,
- build up the ability for the development of process chains from biomass production via the conversion processes up to product design,
- apply the lessons learned to develop closed process chains for sustainable production of, as example, platform chemicals or material from renewable resources.

**Module grade calculation**
The grade of the oral examination is the module grade.

**Prerequisites**
None

**Content**
The course comprises the following contents:

- Introduction to building a common knowledge base, among others the presentation of today’s most important utilization pathway for biomass, biomass potentials, future usage scenarios,
- Essential technical fundamentals for biomass processing. The focus is on the use of lignocellulosic biomass. Procedures for pretreatment, biomass decomposition and separation as well as for conversion of the respective fractions are learned,
- Systematics and analysis of process chains with renewable raw materials based on already established processes such as paper or sugar mills. Extension of the concepts to possible future biorefineries,
- In the exercise, parallel to the lecture, the learned will be applied and implemented by development of an exemplary biorefinery. The results will be presented in a seminar.
5.104 Module: Processing of Nanostructured Particles [M-CIWVT-103073]

**Responsible:** Prof. Dr.-Ing. Hermann Nirschl

**Organisation:** KIT Department of Chemical and Process Engineering

**Mandatory**

| T-CIWVT-106107 | Processing of Nanostructured Particles | 6 CR | Nirschl |

**Competence Certificate**

The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

Ability to design a process technology for the manufacturing and production of nanoscale particles

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Development of technical process in particle engineering; particle characterisation, interface engineering, particle synthesis; Typical processes: grinding, mixing, granulation, selective separation, classifying; fundamentals of apparatus and devices; simulation techniques, simulation tools

**Workload**

- Attendance time (Lecture): 60 h
- Homework: 60 h
- Exam Preparation: 60 h

Skriptum zur Vorlesung
Module: Product Design II [M-CIWVT-104396]

Responsible: Prof. Dr.-Ing. Matthias Kind
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
Specialized Course I / Product Design

Credits: 4
Grading scale: Grade to a tenth
Recurrence: Each winter term
Duration: 1 term
Language: German
Level: 4
Version: 1

Competence Certificate
The examination is an oral examination with a duration of 30 minutes.
The grade of the oral examination is the module grade.

Competence Goal
Students have gathered insight into their role and professional tasks during industrial product design.

Prerequisites
None

Content
Continuous product innovation is decisive for the competitiveness of companies. The module introduces to the principle of "conceptual product design". The principle will be explained by lecturing, by exercising and by viewing and discussing a truly instructive movie on the topic. The understanding of the principle is deepened on the subjects of "crystallization" and "colloidal systems". The principle of "conceptual product design" comprises on the one hand the notion of a "process function", which is the functional relation between process parameters and physico-chemical product properties, and on the other hand the notion of a "property function", which is the functional relation between these properties and the product quality.

Workload
- Attendance time (Lecture): 30 h
- Homework: 60 h
- Exam Preparation: 30 h

Literature
- Product Design and Engineering – Formulation of Gels and Pastes (Ed. U. Bröckel, W. Meier, G. Wagner); Wiley VCH; Weinheim 2013

Mandatory
T-MACH-109192 Methods and Processes of PGE - Product Generation Development 6 CR Albers, Burkardt, Matthiesen

Competence Certificate
Written examination (processing time: 120 min + 10 min reading time)

Competence Goal
The students are able to ...

- classify product development in companies and differentiate between different types of product development.
- name the relevant influencing factors of a market for product development.
- name, compare and use the central methods and process models of product development within moderate complex technical systems.
- explain problem solving techniques and associated development methods.
- explain product profiles and to differentiate and choose suitable creative techniques of solution/idea generation finding on this basis.
- use design guidelines to create simple technical systems and to explain these guidelines.
- name and compare quality assurance methods; to choose and use suitable methods for particular applications.
- explain the different methods of design of experiment.
- explain the costs in development process.

Prerequisites
None

Content
Basics of Product Development: Basic Terms, Classification of the Product Development into the industrial environment, generation of costs / responsibility for costs
Concept Development: List of demands / Abstraction of the Problem Definition / Creativity Techniques / Evaluation and selection of solutions
Drafting: Prevailing basic rules of Design / Design Principles as a problem oriented accessory
Quality Assurance in early Development Phases: Methods of Quality Assurance in an overview/QFD/FMEA

Workload
1. Time of presence lecture: 15 * 3h = 45 h
2. Prepare/follow-up lecture: 15 * 4,5 h = 67,5 h
3. Time of presence exercise: 4 * 1,5h = 6 h
4. Prepare/follow-up exercise: 4 * 3 h = 12 h
5. Exam preparation and time of presence: 49,5 h
Total: 180 h = 6 LP

**Competence Certificate**

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

The grade of the oral examination is the module grade.

**Competence Goal**

Students are capable to discuss the cause and the differing elementary steps of homogen reactions, and they are qualified to calculate rate coefficients from experimental studies/data. Because of various examples, students can identify and analyse reactions by different elementary steps and they are capable to evaluate homogen reactions critically.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Basics: transition state theory, thermodynamics and the relationship to kinetics, active sites and chain reactions.

Application: photochemistry, reactions in solution, polyreactions, autocatalysis and explosions.

**Workload**

- Attendance time (Lecture): 34 h
- Homework: 16 h
- Exam Preparation: 130 h
Module: Refinery Technology - Liquid Fuels [M-CIWVT-104291]

**Responsible:** Prof. Dr. Reinhard Rauch  
**Organisation:** KIT Department of Chemical and Process Engineering  
**Part of:** Technical Supplement Course

**Competence Certificate**
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).
The grade of the oral examination is the module grade.

**Competence Goal**
The students are enabled to balance modern processes for the production of liquid fuels and to put them into context of a modern refinery. This knowledge can be transferred to the evaluation and the development of other processes.

**Module grade calculation**
The grade of the oral examination is the module grade.

**Prerequisites**
None

**Content**
Introduction to liquid chemical fuels: sources, resources/reserves, consumption, characteristic properties of raw materials and products, overview of conversion processes.
Petroleum and petroleum refining: characterization of petroleum crude oils and refinery products, physical separation processes, chemical conversion/upgrading processes (chemical equilibrium, reaction technology etc.), refinery structures.
Non-conventional liquid fuels e.g. from synthesis processes or biomass feedstocks (vegetable oil and derived fuels, alcohols, synthetic liquid fuels).

T-CIWVT-108914  Refrigeration B - Foundations of Industrial Gas Processing  6 CR  Grohmann

Competence Certificate
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

Competence Goal
Understanding the principles of different processes for gas liquefaction and gas separation; Analysing processes in order to reveal the sources of energy demand; Applying the principles of thermodynamics of mixtures and analysing the states of fluids in rectification columns; Assessing the potential of technical concepts from a thermodynamic point of view.

Module grade calculation
The grade of the oral examination is the module grade.

Prerequisites
None

Content
Gas liquefaction processes, process analyses, refrigerators and mixed-refrigerant cycles, gas separation by low-temperature rectification, air separation and extraction of noble gasses, processing and separation of natural gas, ethylene production, processing of H2-enriched gas mixtures, storage and transport of liquefied gasses.

**Competence Certificate**  
The examination is a written examination with a duration of 120 minutes (section 4 subsection 2 number 1 SPO).

**Competence Goal**  
Students understand specific needs of liquid and solid formulations for life science application. They are able to select appropriate additives and understand their relevance for product preparation and stabilisation. They understand and master basics of formulation preparation and cope with the design of suitable processes. They are acquainted with conventional and innovative technologies. They identify correlations between process parameters and product performance. They are able to transfer process knowledge between different products.

Students are able to identify relevant parameters for product performance. They are able to select suitable scientific based characterisation methods and can discuss analytic results critically.

**Prerequisites**  
None

**Content**

- Additives and active substances (LV FT1: U. van der Schaaf/LVT): Substance categories: Properties and molecular structure; Purposes and functionality: Interfacial activity, modulation of viscosity, etc.; Measurement techniques and newest developments.
- Emulsification and Dispersion Technologies: (LV FT2: H.P. Karbstein/LVT) Characteristics of liquid formulations; processing objectives; fundamentals of particle desaggregation and disruption as well as droplet break-up; particle and droplet stabilization in liquid continuous phase; apparatus design and operation principle; process design; process and property function for preparation of liquid formulations; characterisation of liquid formulation properties: fundamentals and measurement devices; innovative developments.
- Drying of dispersions: (LV FT3: H.P. Karbstein/LVT) Objectives of drying, fundamentals of product stabilisation for extended shelf life; processes using the examples of spray drying, drum drying, freeze drying: operation principles, apparatus design, process design, process function; fundamentals of powder quality characterization, instant properties, fundamentals and measurement devices; agglomeration for improved instant properties.
- Extrusion Technology: (LV FT4: M. A. Emin/LVT) Fundamentals of extrusion and extruded product design, extrusion equipments, process design, characterization of the products and process (fundamentals of instrumentation and modeling)

This lecture is prerequisite for practical extrusion course, which is offered as an optional course (i.e. NF or VF LVT).

#### Mandatory

#### Competence Certificate

The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO). The grade of the oral examination is the module grade.

#### Competence Goal

The students

- Know the special characteristics of solar energy
- Can explain how the various solar concentrating techniques work
- Know how concentrated solar radiation can be coupled into different processes
- Know about different storage systems and how they are integrated into a process
- Know the specific challenge of using solar energy and how to solve them
- Can design simple systems for specific operating conditions and locations

#### Module grade calculation

The grade of the oral examination is the module grade.

#### Prerequisites

None

#### Content

The lecture Solar Process Technology describes the use and integration of concentrating solar technology in various high-temperature processes. After the introduction of the basics of solar radiation, the techniques with which direct solar radiation can be concentrated will be explained. The focus of the lecture is on the coupling of solar high-temperature heat in high-temperature processes, which can thus be operated solely or partially solar. Power-generating processes, purely thermal high-temperature processes and chemical processes are explained. From the large number of existing processes, a few examples are selected and the challenges of solar operation as well as the technical implementation are shown. The necessary development steps in different areas, such as materials science, process control and reactor technologies are explained and the development from the laboratory to the pilot scale is clarified. Cross-cutting issues that play a significant role in all processes are the use of storage systems and the hybrid operation of processes. Various thermal and chemical storage systems are discussed and their inclusion in and adaptation to the processes are exemplified. The hybrid operation of processes is explained in more detail.

#### Workload

- Attendance time (Lecture): 30 h
- Homework: 345 h
- Exam Preparation: 45 h
Module: Sol-Gel Processes [M-CIWVT-104489]

Responsibles: Dr.-Ing. Steffen Peter Müller
Organisation: KIT Department of Chemical and Process Engineering
Part of: Technical Supplement Course
- Specialized Course I / Mechanical Process Engineering

Mandatory
T-CIWVT-108822 Sol-Gel Processes 4 CR Müller

Competence Certificate
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).

Competence Goal
Students are capable to describe and analyse the complete process from the starting material (sol) to the finished product (gel), like ceramics.
They are qualified to evaluate and estimate every single step of the entire process critically.

Prerequisites
None

Content
Production of functional material via the sol-gel-process: hydrolyse and condensation, the gel-building process (gelation) and aging, deformation and rheology, drying-process, structure of aero- and xerogels, surface-chemistry and modification of the surface and finally sintering. Applications: powder, ceramics, glass, membranes and coatings.

Workload
- Attendance time (Lecture): 22.5 h
- Homework: 16 h
- Exam Preparation: 80 h
M 5.121 Module: Sol-Gel-Processes (Including Practical Course) [M-CIWVT-104284]

Mandatory

- T-CIWVT-108822 Sol-Gel Processes 4 CR Müller
- T-CIWVT-108823 Practical Course Sol-Gel Processes 2 CR Müller

Competence Certificate

The examination consists of:

1. Oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO).
2. Ungraded Laboratory work (section 4 subsection 3 SPO).

The grade of the oral examination is the module grade.

Competence Goal

Students are capable to describe and analyse the complete process from the starting material (sol) to the finished product (gel), like ceramics.

They are qualified to evaluate and estimate every single step of the entire process critically.

Prerequisites

None

Content

Production of functional material via the sol-gel-process: hydrolyse and condensation, the gel-building process (gelation) and aging, deformation and rheology, drying-process, structure of aero- and xerogels, surface-chemistry and modification of the surface and finally sintering. Applications: powder, ceramics, glass, membranes and coatings.

Workload

- Attendance time (Lecture): 22.5 h
- Internship: 11.5 h, 4 attempts
- Homework: 16 h
- Exam Preparation: 130 h
**Module: Solid Liquid Separation [M-CIWVT-104342]**

**Responsible:** Dr.-Ing. Marco Gleiß  
**Organisation:** KIT Department of Chemical and Process Engineering  
**Part of:** Technical Supplement Course  
- Specialized Course I / Mechanical Process Engineering  
- Specialized Course I / Biopharmaceutical Process Engineering  
- Specialized Course I / Bioresource Engineering

### Credits 8  
**Grading scale** Grade to a tenth  
**Recurrence** Each winter term  
**Duration** 1 term  
**Language** German  
**Level** 5  
**Version** 1

### Mandatory

| T-CIWVT-108897 | Solid Liquid Separation | 8 CR | Gleiß |

**Competence Certificate**  
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**  
The students are able to apply the fundamental laws and the derived physical principles of the particle separation from liquids and not only to relate them to the principally suited separation apparatuses but also special variants. They have the ability to apply the relationship between product operation and design parameters to different separation techniques. They can analyse separation problems with scientific methods and give alternative problem solution proposals.

**Module grade calculation**  
The grade of the oral examination is the module grade.

**Prerequisites**  
None

**Content**  
physical fundamentals, apparatuses, applications, strategies; characterisation of particle systems and slurries; pretreatment methods to enhance the separability of slurries; fundamentals, apparatuses and process technology of static and centrifugal sedimentation, flotation, depth filtration, crossflow filtration, cake forming vacuum and gas overpressure filtration, filter centrifuges and press filters; filter media; selection criteria and scale-up methods for separation apparatuses and machines; apparatus combinations; case studies to solve separation problems

**Workload**

- Attendance time (Lecture): 60 h  
- Homework: 80 h  
- Exam Preparation: 100 h

**Literature**  
Anlauf: Skriptum "Mechanische Separationstechnik - Fest/Flüssig-Trennung"

**Responsible:** Prof. Dr. Norbert Willenbacher

**Organisation:** KIT Department of Chemical and Process Engineering

**Part of:**
- Technical Supplement Course
- Specialized Course I / Applied Rheology
- Specialized Course I / Product Design

### Competence Certificate

Learning control is an oral examination with a duration of about 30 minutes.

### Competence Goal

A deep understanding of the physico-chemical effects at the surface of the dispersed phase in dispersions and the consideration of their interaction with the dispersity degree as precondition for understanding and optimizing processes involving dispersions.

### Module grade calculation

The module grade is the grade of the oral examination.

### Prerequisites

None

### Content

Definitions, Applications and stability of dispersions; Molecular – kinetic properties of dispersions: Thermal molecular motion and Brownian motion, Diffusion in solutions and dispersions, sedimentation stability; Adsorption at solid-gas interface: Nature of adsorption forces, Langmuir monomolecular adsorption theory, polymolecular theory of Polany and BET-theory, capillary condensation, chemical adsorption, kinetic of adsorption, influence of the properties of adsorptent and adsorptive on adsorption; Adsorption at solution-gas interface: Surface tension, surface active and inactive substances, Adsorption equation of Gibbs, Shishkovsky-equation and the derivation of Langmuir-equation, effects of the structure and size of tenside molecules, structure of the adsorbed layer; Adsorption at solid-solution interface: Molecular adsorption from the solution, ionic adsorption, wetting phenomena; Electrical properties of dispersions, Introduction to electrokinetic phenomena, structure of the electric double layer (Theories of Helmholz – Perrin, Gouy-Chapman and Stern), Effects of electrolytes on zeta-potential, Electrophoresis and Electroosmosis, Measurement of zeta-potential; Stability and Coagulation of dispersions: Kinetic of coagulation, interparticle energy potential, solvation, structural-mechanical and entropy effects, coagulation through electrolytes, adsorption phenomena and coagulation; Applications in Crystallization and Solid – Liquid Separation.

### Annotation

A deep understanding of the physico-chemical effects at the surface of the dispersed phase in dispersions and the consideration of their interaction with the dispersity degree as precondition for understanding and optimizing processes involving dispersions.

### Workload

Lectures and Exercises: 30 h  
Homework: 60 h  
Exam preparation: 30 h

Responsible: Prof. Dr.-Ing. Thomas Kolb
Organisation: KIT Department of Chemical and Process Engineering

Part of:
- Technical Supplement Course
- Specialized Course I / Fuel Technology
- Specialized Course I / Combustion Technology
- Specialized Course I / Energy and Combustion Technology

Credits: 4
Grading scale: Grade to a tenth
Recurrence: Each summer term
Duration: 1 term
Language: English
Level: 5
Version: 1

Mandatory
T-CIWVT-108830  Technical Systems for Thermal Waste Treatment  4 CR  Kolb

Competence Certificate
The examination is an oral examination with a duration of about 20 minutes (section 4 subsection 2 number 2 SPO). The grade of the oral examination is the module grade.

Competence Goal
The students are enabled to characterize different waste fractions and select suitable technologies for waste to energy conversion based on detailed process understanding and by application of evaluation tool combining economical and ecological aspects. The students gain a profound inside into process operation.

Module grade calculation
The grade of the oral examination is the module grade.

Prerequisites
None

Content
- Waste: definition, specification, potential
- Basic thermo-chemical processes for waste treatment: pyrolysis, gasification, combustion
- Technical systems for thermal waste treatment:
  - combustion: Grate furnace, rotary kiln, fluidized bed
  - gasification: fixed bed, fluidized bed, entrained flow
  - pyrolysis: rotary kiln
  - Refractory technology
  - Legal aspects of waste management
  - Tools for critical evaluation of waste treatment technologies
  - Excursion to industrial sites

Workload
- Attendance time (Lecture): 30 h
- Homework: 50 h

Competence Certificate

Learning Control:
A business plan is developed in group work. Success control is a group presentation of this business model as part of the seminar. Duration approx. 45 minutes, of which approx. 30 minutes are lecture and 15 minutes are discussion.

Competence Goal

Enthusiasm for technology-driven business start-up
The students have basic knowledge about economic and legal aspects of company foundation as well as state subsidy programs.
They can apply this knowledge to making a business plan that includes both technical and business management aspects. They can present and explain the business plan clearly.

Prerequisites

None

Content

Motivation for business start-up
Legal and economic aspects of company foundation
State subsidy programs
Development of a business plan
Technology push, market and customer orientation
Examples of successful business start-up in the fields of chemical engineering, systems engineering and plant construction, energy technology, mobility and aeronautics, innovative materials, renewable energies

**Competence Certificate**  
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**

- The students understand the similarity between momentum, heat and mass transfer.  
- The students are able, based on the analogy between laminar and turbulent transport, to explain and quantify the "turbulent" diffusion.  
- The students are able to evaluate measured distribution of turbulent parameters.  
- Based on the turbulence and heat release interaction the students are able to evaluate experimental results of turbulent flames.

**Module grade calculation**  
The grade of the oral examination is the module grade.

**Prerequisites**  
None

**Content**  
Turbulence characterization; Derivation of the balance equations for mass, momentum and energy; Turbulent momentum, heat and mass transport; Derivation of the balance equation for the kinetic energy of the mean and fluctuating flow field; Derivation of the balance equation for enstrophy of the mean and fluctuating flow field; The turbulent energy cascade process; The interaction between turbulence and heat release by turbulent premixed flames.

**Workload**

- Attendance time (Lecture): 30 h  
- Homework: 15 h  
- Exam Preparation: 75 h

**Literature**  
Tennekes and Lumley, A first course in turbulence; N. Peters, Turbulent combustion; T. Poinsot, D. Veynante, Theoretical and numerical combustion

**Competence Certificate**
The examination is an oral examination with a duration of 20 minutes (section 4 subsection 2 number 2 SPO). The grade of the oral examination is the module grade.

**Competence Goal**
Acquisition of deep understanding of chemical engineering processes using the example of continuous distillation of multi-component mixtures. Ability to transfer this understanding into a numerical model and solving this model. Understanding of column fluid dynamics.

**Prerequisites**
None

**Content**
Fundamentals of modelling and simulation of chemical engineering processes using the example of distillation of multi-component mixtures: phase equilibrium, fugacity coefficient, models for activity coefficient, flash, MESH-equations for continuous distillation, solution method of Thiele and Gaddes, introduction to advanced numerical methods, fundamentals of fluid dynamic design considerations of tray and packed columns (python, excel or other programming language).

**Workload**
- Attendance time (Lecture): 45 h
- Homework: 70 h
- Exam Preparation: 70 h

Competence Certificate
The examination is a written examination with a duration of 180 minutes (section 4 subsection 2 number 1 SPO). The grade of the written examination is the module grade.

Competence Goal
Students can systematically apply scientific methods for physics-based modelling of Thermal Transport Processes and of selected unit operations. To this end they are able to create mathematical models and systems of equations for process simulation. Furthermore, they have some know-how to use numerical tools for solving these quite large systems of equations. Finally, students are skilled in the quantitative application of the taught knowledge to new and yet unknown processes and engineering problems.

Grading scale Grade to a tenth
Recurrence Each summer term
Duration 1 term
Language English
Level 5
Version 1

Mandatory
T-CIWVT-110916 Transport and Storage of Chemical Energy Carriers 4 CR Kolb

Competence Certificate
Learning control is an oral examination with a duration of about 25 minutes according to SPO section 4 subsection 2.

Competence Goal
Application of basic principles of engineering on the special problems of a municipal utility company.

Module grade calculation
The module grade ist the grade of oral examination.

Content
The master course “Transport and Storage of Chemical Energy Carriers” teaches the fundamentals of two important steps of today’s energy supply chain: transportation and storage. The transportation of chemical energy carriers from the source to the consumer is discussed in detail and options for storage are presented. The lecture also teaches the basics of organization and management of utilities companies and the basics of economics (profitability analysis, cost estimation). Lecturers are renowned experts from industry and research.

• Energy Resources / Chemical Energy Carriers
• Distribution Systems
• Natural Gas Utilization
• Organisation and Management Systems
• Fundamentals of Economics
• Profitability Analysis
• Conversion Processes
• Odorants and Odorization
• Gas Appliances and New Technologies
• Production, Upgrading and Injection of Gases from RES
• Estimating the Capital Expenditure of Chemical Plants

Workload
Total 120 h:

• lectures: 30 h
• homework: 60 h
• exam preparation: 30 h

### Mandatory
| T-CIWVT-108996 | Unit Operations and Process Chains for Food of Animal Origin | 4 CR | Karbstein |

### Competence Certificate
Learning control is an oral examination with a duration about of 15 minutes (section 4 subsection 2 number 2 SPO).

### Competence Goal
Students understand and are able to explain conventional methods for producing foods, even complex ones, from animals. They know process chains and unit operations of relevance, both conventional and innovative approaches. They are able to design the processes according to raw material specifics. They identify correlations between process parameters and quality-determining properties of food. They are also able to transfer process knowledge between individual product groups. They know essential aspects required to assess sustainability and energy aspects of the individual process steps and complete process chains.

Students are able to apply principles of product design. This involves identifying the relationships between process parameters and the structure of a food product (process function) as well as between the inner structure of foods and their properties (property function). Based on this, they are able to analyze and solve problems in the field of food process engineering.

Students are able to use their knowledge to evaluate a process unit with regard to food production, involving aspects such as sustainability, energy efficiency, food safety or expected product quality.

### Module grade calculation
Grade of the module is the grade of oral examination.

### Prerequisites
None

### Content
**Lecture:** Milk and dairy products, meat and meat products, sausages, functional foods: Process chains and unit operations

Basics of process design, process energy and raw material related specifics, innovative processes; relevant parameters for keeping food safety and quality.

**Mandatory**

| T-CIWVT-108995 | Unit Operations and Process Chains for Food of Plant Origin | 6 CR Karbstein |

**Competence Certificate**
The examination is an oral examination with a duration of about 25 minutes (section 4 subsection 2 number 2 SPO). The grade of the oral examination is the module grade.

**Competence Goal**
Students understand and are able to explain conventional methods for producing foods, even complex ones, from plants. They know process chains and unit operations of relevance, both conventional and innovative approaches. They are able to design the processes according to raw material specifics. They identify correlations between process parameters and quality-determining properties of food. They are also able to transfer process knowledge between individual product groups. They know essential aspects required to assess sustainability and energy aspects of the individual process steps and complete process chains.

Students are able to apply principles of product design. This involves identifying the relationships between process parameters and the structure of a food product (process function) as well as between the inner structure of foods and their properties (property function). Based on this, they are able to analyze and solve problems in the field of food process engineering.

Students are able to use their knowledge to evaluate a process unit with regard to food production, involving aspects such as sustainability, energy efficiency, food safety or expected product quality.

**Prerequisites**
None

**Content**
Food oils and fats, margarines and spreadable fats, cereals, fruits and vegetables, sugar, chocolate, coffee, bear, wine, spirits: Process chains and unit operations: Basics of process design, process energy and raw material related specifics, innovative processes; relevant parameters for keeping food safety and quality.

**Compentence Certificate**

The examination is an oral examination with a duration of 20 about minutes (section 4 subsection 2 number 2 SPO). The grade of the oral examination is the module grade.

**Competence Goal**

Students will be able to explain basic physical relationships in vacuum science. Building on this, they can design a complex vacuum system correctly and in accordance with specifications.

**Module grade calculation**

The grade of the oral examination is the module grade.

**Prerequisites**

None

**Content**

Basics; vacuum pumps; practical vacuum limits; outgassing and its minimization; cleanliness requirements; vacuum instrumentation; total pressure measurement; residual gas analysis; leak detection; rarefied gas flow; design of vacuum systems; technical specifications; quality in vacuum; examples for large vacuum systems; industrial applications in the process industry.

**Workload**

- Attendance time (Lecture): 60 h
- Homework: 80 h
- Exam Preparation: 40 h

5.141 Module: Wastewater Treatment Technologies [M-BGU-104917]

Responsible: PD Dr.-Ing. Stephan Fuchs
Organisation: KIT Department of Civil Engineering, Geo- and Environmental Sciences
Part of: Technical Supplement Course (Usage from 4/1/2019)
  Specialized Course I / Environmental Process Engineering (Usage from 4/1/2019)
  Specialized Course I / Water Technology (Usage from 4/1/2019)

Credits 6
Grading scale Grade to a tenth
Recurrence Each summer term
Duration 1 term
Language English
Level 4
Version 3

Mandatory

| T-BGU-111282 | Term Paper 'Wastewater Treatment Technologies' | 3 CR | Fuchs |
| T-BGU-109948 | Wastewater Treatment Technologies            | 3 CR | Fuchs |

Competence Certificate
- 'Teilleistung' T-BGU-111282 with not graded accomplishment according to § 4 Par. 3 as examination prerequisite
- 'Teilleistung' T-BGU-109948 with written examination according to § 4 Par. 2 No. 1

details about the learning controls see at the respective 'Teilleistung'

Competence Goal
Students acquire knowledge about typical techniques and facilities in wastewater treatment at local and international level. They are able to perform a technical evaluation and describe dimensioning approaches taking into consideration legal boundary conditions. Students analyze, evaluate and optimize operation of plant technologies. They focus on energy-efficient plant designs considering the most relevant factors affecting the total costs. Students can analyze the situation in emerging and developing countries making a comparison with that in industrialized countries. Based on that, they are able to develop water-related management strategies.

Module grade calculation
grade of the module is grade of the exam

Prerequisites
none

Content
Students gain deep knowledge about design and operation of typical process technologies in municipal wastewater treatment in Germany and abroad. They analyze, evaluate the applied technologies and take decisions when new and more holistic oriented methods can be implemented. Different mechanical, biological and chemical treatment technologies are considered, whereby the treatment of waste water from households and industry as well as the treatment of rainwater is discussed. The visits of different facilities in Germany complete the course.

Recommendation
module 'Urban Water Infrastructure and Management'

Annotation
The number of participants in the course is limited to 20 persons. The registration is to be made via ILIAS. The places are allocated with priority to students from Water Science and Engineering, then Civil Engineering and Geocology and further study programs. The allocation is made by consideration of the semester. The topics for the Term Paper are assigned at the beginning of the course.
Workload
contact hours (1 HpW = 1 h x 15 weeks):

- lecture/exercise: 60 h

independent study:

- preparation and follow-up lecture/exercises: 30 h
- preparation of Term Paper 'Wastewater Treatment Technologies' (exam prerequisite): 60 h
- examination preparation: 30 h

total: 180 h

**Mandatory**

| T-CIWVT-108841 | Water Quality Assessment | 6 CR | Abbt-Braun |

**Competence Certificate**
The examination is an oral examination with a duration of about 30 minutes (section 4 subsection 2 number 2 SPO).

**Competence Goal**
Students can explain links between the geogenic and anthropogenic occurrence and the concentration of organic and inorganic compounds in the hydrological cycle. They get knowledge about the analysis of the water constituents and of microorganism in the water samples. They are able to do calculations, and to compare and interpret data. They will learn how to use different methods, and to interpret water quality assessment.

**Module grade calculation**
The grade of the oral examination is the module grade.

**Prerequisites**
None

**Content**
Various types of water, legislation, analytical definitions, sampling methods, quick test methods, field investigations, organoleptic determinations, general investigations, optical characterization (turbidity, color, UV, Lambert-Beer’s law, photometry), titrations, acid-base-systems, buffering, main inorganic compounds (anions, cations, occurrence, ion chromatography, titration, complexometry, flame photometry, atomic spectroscopy), heavy metals and metalloids (occurrence and main methods for determination), organic compounds and organic micropollutants (occurrence, liquid chromatography, infrared spectroscopy, gas chromatography), water specific sum parameters (DOC, AOX, AOS, CSB, BSB), microbiology.

**Mandatory**

| T-CIWVT-106802 | Water Technology | 6 CR | Horn |

**Competence Certificate**  
Oral exam, 30 min

**Competence Goal**  
Students learn fundamental knowledge in water chemistry and how to apply it to processes in aquatic systems in general and in reactors for water treatment. Water treatment will be taught for drinking water and partly waste water. The students are able to apply physical, chemical and biochemical treatment for the respective removal of particulate and dissolved components in water. They are able to use the fundamental design parameters for the different types of unit operations.

**Prerequisites**  
None

**Content**  
Water cycle, different types of raw water (ground and surface water). Water as solvent, carbonate balance, differentiation between microbiological and chemical population. Unit operations: sieving, sedimentation, filtration, flocculation, flotation, ion exchange, aeration, oxidation, disinfection, adsorption. For all unit operations design parameters will be provided. Simple 1D models will be discussed for description of kinetics and retention time in reactors for water treatment.

**Workload**  
Attendance time: 45 h  
Preparation/follow-up: 60 h  
Examination + exam preparation: 75 h

**Literature**  
Lecture notes will be provided in ILIAS

Amtliche Bekanntmachung

2016
Ausgegeben Karlsruhe, den 10. Mai 2016
Nr. 31

Inhalt

Seite

Studien- und Prüfungsordnung des Karlsruher Instituts für Technologie (KIT) für den Masterstudiengang Chemieingenieurwesen und Verfahrenstechnik 233
Studien- und Prüfungsordnung des Karlsruher Instituts für Technologie (KIT) für den Masterstudiengang Chemieingenieurwesen und Verfahrenstechnik

vom 03. Mai 2016

Der Präsident hat seine Zustimmung gemäß § 20 Absatz 2 KITG i.V.m. § 32 Absatz 3 Satz 1 LHG am 03. Mai 2016 erteilt.

Inhaltsverzeichnis

I. Allgemeine Bestimmungen

§ 1 Geltungsbereich
§ 2 Ziele des Studiums, akademischer Grad
§ 3 Regelstudienzeit, Studienaufbau, Leistungspunkte
§ 4 Modulprüfungen, Studien- und Prüfungsleistungen
§ 5 Anmeldung und Zulassung zu den Modulprüfungen und Lehrveranstaltungen
§ 6 Durchführung von Erfolgskontrollen
§ 6 a Erfolgskontrollen im Antwort-Wahl-Verfahren
§ 6 b Computergestützte Erfolgskontrollen
§ 7 Bewertung von Studien- und Prüfungsleistungen
§ 8 Wiederholung von Erfolgskontrollen, endgültiges Nichtbestehen
§ 9 Verlust des Prüfungsanspruchs
§ 10 Abmeldung; Versäumnis, Rücktritt
§ 11 Täuschung, Ordnungsverstoß
§ 12 Mutterschutz, Elternzeit, Wahrnehmung von Familienpflichten
§ 13 Studierende mit Behinderung oder chronischer Erkrankung
§ 14 Modul Masterarbeit
§ 14 a Berufspraktikum
§ 15 Zusatzleistungen

§ 15 a Überfachliche Qualifikationen
§ 16 Prüfungsausschuss
§ 17 Prüfende und Beisitzende
§ 18 Anerkennung von Studien- und Prüfungsleistungen, Studienzeiten

II. Masterprüfung
§ 19 Umfang und Art der Masterprüfung
§ 19 a Leistungsnachweise für die Masterprüfung
§ 20 Bestehen der Masterprüfung, Bildung der Gesamtnote
§ 21 Masterzeugnis, Masterurkunde, Diploma Supplement und Transcript of Records

III. Schlussbestimmungen
§ 22 Bescheinigung von Prüfungsleistungen
§ 23 Aberkennung des Mastergrades
§ 24 Einsicht in die Prüfungsakten
§ 26 Inkrafttreten, Übergangsvorschriften
Präambel

Das KIT hat sich im Rahmen der Umsetzung des Bolognaprozesses zum Aufbau eines europäischen Hochschulraumes zum Ziel gesetzt, dass am Abschluss des Studiums am KIT der Mastergrad stehen soll. Das KIT sieht daher die am KIT angebotenen konsekutiven Bachelor- und Masterstudiengänge als Gesamtkonzept mit konsekutivem Curriculum.

I. Allgemeine Bestimmungen

§ 1 Geltungsbereich
Diese Masterprüfungsordnung regelt Studienablauf, Prüfungen und den Abschluss des Studiums im Masterstudiengang Chemieingenieurwesen und Verfahrenstechnik am KIT.

§ 2 Ziel des Studiums, akademischer Grad
(1) Im konsekutiven Masterstudium sollen die im Bachelorstudium erworbenen wissenschaftlichen Qualifikationen weiter vertieft, verbreitert, erweitert oder ergänzt werden. Ziel des Studiums ist die Fähigkeit, die wissenschaftlichen Erkenntnisse und Methoden selbstständig anzuwenden und ihre Bedeutung und Reichweite für die Lösung komplexer wissenschaftlicher und gesellschaftlicher Problemstellungen zu bewerten.

(2) Aufgrund der bestandenen Masterprüfung wird der akademische Grad „Master of Science (M.Sc.)“ für den Masterstudiengang Chemieingenieurwesen und Verfahrenstechnik verliehen.

§ 3 Regelstudienzeit, Studienaufbau, Leistungspunkte
(1) Die Regelstudienzeit beträgt vier Semester.

(4) Der Umfang der für den erfolgreichen Abschluss des Studiums erforderlichen Studien- und Prüfungsleistungen wird in Leistungspunkten gemessen und beträgt insgesamt 120 Leistungspunkte.

(5) Lehrveranstaltungen können nach vorheriger Ankündigung auch in englischer Sprache angeboten werden, sofern es deutsche Wahlmöglichkeiten gibt.

§ 4 Modulprüfungen, Studien- und Prüfungsleistungen

(2) Prüfungsleistungen sind:
   1. schriftliche Prüfungen,
   2. mündliche Prüfungen oder
3. Prüfungsleistungen anderer Art.

(3) Studienleistungen sind schriftliche, mündliche oder praktische Leistungen, die von den Studierenden in der Regel lehrveranstaltungsbegleitend erbracht werden. Die Masterprüfung darf nicht mit einer Studienleistung abgeschlossen werden.

(4) Von den Modulprüfungen sollen mindestens 70 % benotet sein.

(5) Bei sich ergänzenden Inhalten können die Modulprüfungen mehrerer Module durch eine auch modulübergreifende Prüfungsleistung (Absatz 2 Nr.1 bis 3) ersetzt werden.

§ 5 Anmeldung und Zulassung zu den Modulprüfungen und Lehrveranstaltungen

(1) Um an den Modulprüfungen teilnehmen zu können, müssen sich die Studierenden online im Studierendenportal zu den jeweiligen Erfolgskontrollen anmelden. In Ausnahmefällen kann eine Anmeldung schriftlich im Studierendenservice oder in einer anderen, vom Studierendenservice autorisierten Einrichtung erfolgen. Für die Erfolgskontrollen können durch die Prüfenden Anmeldefristen festgelegt werden. Die Anmeldung der Masterarbeit ist im Modulhandbuch geregelt.

(3) Zu einer Erfolgskontrolle ist zuzulassen, wer
1. in den Masterstudiengang Chemieingenieurwesen und Verfahrenstechnik am KIT eingeschrieben ist; die Zulassung beurlaubter Studierender ist auf Prüfungsleistungen beschränkt; und
2. nachweist, dass er die im Modulhandbuch für die Zulassung zu einer Erfolgskontrolle festgelegten Voraussetzungen erfüllt und
3. nachweist, dass er in dem Masterstudiengang Chemieingenieurwesen und Verfahrenstechnik den Prüfungsanspruch nicht verloren hat und
4. die in § 19 a genannte Voraussetzung erfüllt.

(4) Nach Maßgabe von § 30 Abs. 5 LHG kann die Zulassung zu einzelnen Pflichtveranstaltungen beschränkt werden. Der/die Prüfende entscheidet über die Auswahl unter den Studierenden, die sich rechtzeitig bis zu dem von dem/der Prüfenden festgesetzten Termin angemeldet haben unter Berücksichtigung des Studienfortschritts dieser Studierenden und unter Beachtung von § 13 Abs. 1 Satz 1 und 2, sofern ein Abbau des Überhangs durch andere oder zusätzliche Veranstaltungen nicht möglich ist. Für den Fall gleichen Studienfortschritts sind durch die KIT-Fakultäten weitere Kriterien festzulegen. Das Ergebnis wird den Studierenden rechtzeitig bekannt gegeben.

§ 6 Durchführung von Erfolgskontrollen

(2) Die Art der Erfolgskontrolle (§ 4 Abs. 2 Nr. 1 bis 3, Abs. 3) wird von der/dem Prüfenden der betreffenden Lehrveranstaltung in Bezug auf die Lerninhalte der Lehrveranstaltung und die Lernziele des Moduls festgelegt. Die Art der Erfolgskontrolle, ihre Häufigkeit, Reihenfolge und Gewichtung sowie gegebenenfalls die Bildung der Modulnote müssen mindestens sechs Wochen vor Vorlesungsbeginn im Modulhandbuch bekannt gemacht werden. Im Einvernehmen von Prüfendem und Studierender bzw. Studierendem können die Art der Prüfungsleistung sowie die Prüfungssprache auch nachträglich geändert werden; im ersten Fall ist jedoch § 4 Abs. 4 zu beachten. Bei der Prüfungsorganisation sind die Belange Studierender mit Behinderung oder chronischer Erkrankung gemäß § 13 Abs. 1 zu berücksichtigen. § 13 Abs. 1 Satz 3 und 4 gelten entsprechend.

(3) Bei unverzüglich hohem Prüfungsaufwand kann eine schriftlich durchzuführende Prüfungsleistung auch mündlich, oder eine mündlich durchzuführende Prüfungsleistung auch schriftlich abgenommen werden. Diese Änderung muss im Fall einer ursprünglich mündlich durchzuführenden Prüfung mindestens sechs Wochen vor der Prüfungsleistung, im Fall einer ursprünglich schriftlich durchzuführenden Prüfung mindestens drei Wochen vor der Prüfungsleistung bekannt gegeben werden.

(4) Bei Lehrveranstaltungen in englischer Sprache (§ 3 Abs. 6) können die entsprechenden Erfolgskontrollen in dieser Sprache abgenommen werden. § 6 Abs. 2 gilt entsprechend.

(6) Mündliche Prüfungen (§ 4 Abs. 2 Nr. 2) sind von mehreren Prüfenden (Kollegialprüfung) oder von einer/einem Prüfenden in Gegenwart einer oder eines Beisitzenden als Gruppen- oder Einzelprüfungen abzunehmen und zu bewerten. Vor der Festsetzung der Note hört die/der Prüfende die anderen an der Kollegialprüfung mitwirkenden Prüfenden an. Mündliche Prüfungen dauern in der Regel mindestens 15 Minuten und maximal 60 Minuten pro Studierendem.

Die wesentlichen Gegenstände und Ergebnisse der mündlichen Prüfung sind in einem Protokoll festzuhalten. Das Ergebnis der Prüfung ist den Studierenden im Anschluss an die mündliche Prüfung bekanntzugeben.

Studierende, die sich in einem späteren Semester der gleichen Prüfung unterziehen wollen, werden entsprechend den räumlichen Verhältnissen und nach Zustimmung des Prüfungsleiters Zugriff auf die Materialien und die Beurteilungskriterien der mündlichen Prüfung erhalten. Die Zulassung erstreckt sich nicht auf die Beratung und Bekanntgabe der Prüfungsergebnisse.

(7) Für Prüfungsleistungen anderer Art (§ 4 Abs. 2 Nr. 3) sind angemessene Bearbeitungsfristen einzuhalten und Abgabetermine festzulegen. Dabei ist durch die Art der Aufgabenstellung und durch entsprechende Dokumentation sicherzustellen, dass die erbrachte Prüfungsleistung dem/der Studierenden zurechenbar ist. Die wesentlichen Gegenstände und Ergebnisse der Erfolgskontrolle sind in einem Protokoll festzuhalten.

Bei mündlich durchgeführten Prüfungsleistungen anderer Art muss neben der/dem Prüfenden ein/e Beisitzender/r anwesend sein, die/der zusätzlich zum/r Prüfenden das Protokoll zeichnet.

Schriftliche Arbeiten im Rahmen einer Prüfungsleistung anderer Art haben dabei die folgende Erklärung zu tragen: „Ich versichere wahrheitsgemäß, die Arbeit selbstständig angefertigt, alle benutzten Hilfsmittel vollständig und genau angegeben und alles kenntlich gemacht zu haben, was aus Arbeiten anderer unverändert oder mit Abänderungen entnommen wurde.“ Trägt die Arbeit diese Erklärung nicht, wird sie nicht angenommen. Die wesentlichen Gegenstände und Ergebnisse einer solchen Erfolgskontrolle sind in einem Protokoll festzuhalten.
§ 6 a Erfolgskontrollen im Antwort-Wahl-Verfahren
Das Modulhandbuch regelt, ob und in welchem Umfang Erfolgskontrollen im Wege des Antwort-Wahl-Verfahrens abgelegt werden können.

§ 6 b Computergestützte Erfolgskontrollen
(3) Im Übrigen gelten für die Durchführung von computergestützten Erfolgskontrollen die §§ 6 bzw. 6 a.

§ 7 Bewertung von Studien- und Prüfungsleistungen
(1) Das Ergebnis einer Prüfungsleistung wird von den jeweiligen Prüfenden in Form einer Note festgesetzt.
(2) Folgende Noten sollen verwendet werden:

<table>
<thead>
<tr>
<th>Note</th>
<th>Beschreibung</th>
</tr>
</thead>
<tbody>
<tr>
<td>sehr gut</td>
<td>hervorragende Leistung,</td>
</tr>
<tr>
<td>gut</td>
<td>eine Leistung, die erheblich über den durchschnittlichen Anforderungen liegt,</td>
</tr>
<tr>
<td>befriedigend</td>
<td>eine Leistung, die durchschnittlichen Anforderungen entspricht,</td>
</tr>
<tr>
<td>ausreichend</td>
<td>eine Leistung, die trotz ihrer Mängel noch den Anforderungen genügt,</td>
</tr>
<tr>
<td>nicht ausreichend</td>
<td>eine Leistung, die wegen erheblicher Mängel nicht den Anforderungen genügt,</td>
</tr>
</tbody>
</table>

Zur differenzierten Bewertung einzelner Prüfungsleistungen sind nur folgende Noten zugelassen:

<table>
<thead>
<tr>
<th>Note</th>
<th>Bewertung</th>
</tr>
</thead>
<tbody>
<tr>
<td>1,0; 1,3</td>
<td>sehr gut</td>
</tr>
<tr>
<td>1,7; 2,0; 2,3</td>
<td>Gut</td>
</tr>
<tr>
<td>2,7; 3,0; 3,3</td>
<td>befriedigend</td>
</tr>
<tr>
<td>3,7; 4,0</td>
<td>ausreichend</td>
</tr>
<tr>
<td>5,0</td>
<td>nicht ausreichend</td>
</tr>
</tbody>
</table>

(3) Studienleistungen werden mit „bestanden“ oder mit „nicht bestanden“ gewertet.
(4) Bei der Bildung der gewichteten Durchschnitte der Modulnoten, der Fachnoten und der Gesamtnote wird nur die erste Dezimalstelle hinter dem Komma berücksichtigt; alle weiteren Stellen werden ohne Rundung gestrichen.
(5) Jedes Modul und jede Erfolgskontrolle darf in demselben Studiengang nur einmal gewertet werden.
(6) Eine Prüfungsleistung ist bestanden, wenn die Note mindestens „ausreichend“ (4,0) ist.

(8) Die Ergebnisse der Erfolgskontrollen sowie die erworbenen Leistungspunkte werden durch den Studierendenservice des KIT verwaltet.

(9) Die Noten der Module eines Faches gehen in die Fachnote mit einem Gewicht proportional zu den ausgewiesenen Leistungspunkten der Module ein.

(10) Die Gesamtnote der Masterprüfung, die Fachnoten und die Modulnoten lauten:

<table>
<thead>
<tr>
<th>Wertung</th>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>bis 1,5</td>
<td>sehr gut</td>
</tr>
<tr>
<td>von 1,6 bis 2,5</td>
<td>gut</td>
</tr>
<tr>
<td>von 2,6 bis 3,5</td>
<td>befriedigend</td>
</tr>
<tr>
<td>von 3,6 bis 4,0</td>
<td>ausreichend</td>
</tr>
</tbody>
</table>

§ 8 Wiederholung von Erfolgskontrollen, endgültiges Nichtbestehen

(1) Studierende können eine nicht bestandene schriftliche Prüfung (§ 4 Absatz 2 Nr. 1) einmal wiederholen. Wird eine schriftliche Wiederholungsprüfung mit „nicht ausreichend“ (5,0) bewertet, so findet eine mündliche Nachprüfung im zeitlichen Zusammenhang mit dem Termin der nicht bestandenen Prüfung statt. In diesem Falle kann die Note dieser Prüfung nicht besser als „ausreichend“ (4,0) sein.

(2) Studierende können eine nicht bestandene mündliche Prüfung (§ 4 Absatz 2 Nr. 2) einmal wiederholen.

(3) Wiederholungsprüfungen nach Absatz 1 und 2 müssen in Inhalt, Umfang und Form (mündlich oder schriftlich) der ersten entsprechen. Ausnahmen kann der zuständige Prüfungsausschuss auf Antrag zulassen.

(4) Prüfungsleistungen anderer Art (§ 4 Absatz 2 Nr. 3) können einmal wiederholt werden.

(5) Studienleistungen können mehrfach wiederholt werden.

(6) Die Prüfungsleistung ist endgültig nicht bestanden, wenn die mündliche Nachprüfung im Sinne des Absatzes 1 mit „nicht ausreichend“ (5,0) bewertet wurde. Die Prüfungsleistung ist ferner endgültig nicht bestanden, wenn die mündliche Prüfung im Sinne des Absatzes 2 oder die Prüfungsleistung anderer Art gemäß Absatz 4 zweimal mit „nicht bestanden“ bewertet wurde.

(7) Das Modul ist endgültig nicht bestanden, wenn eine für sein Bestehen erforderliche Prüfungsleistung endgültig nicht bestanden ist.

(8) Eine zweite Wiederholung derselben Prüfungsleistung gemäß § 4 Abs. 2 ist nur in Ausnahmefällen auf Antrag des/der Studierenden zulässig („Antrag auf Zweitwiederholung“). Der Antrag ist schriftlich beim Prüfungsausschuss in der Regel bis zwei Monate nach Bekanntgabe der Note zu stellen.

(9) Die Wiederholung einer bestandenen Prüfungsleistung ist nicht zulässig.
Die Masterarbeit kann bei einer Bewertung mit „nicht ausreichend“ (5,0) einmal wiederholt werden. Eine zweite Wiederholung der Masterarbeit ist ausgeschlossen.

§ 9 Verlust des Prüfungsanspruchs

§ 10 Abmeldung; Versäumnis, Rücktritt

(1) Studierende können ihre Anmeldung zu schriftlichen Prüfungen ohne Angabe von Gründen bis zur Ausgabe der Prüfungsaufgaben widerrufen (Abmeldung). Eine Abmeldung kann online im Studierendenportal bis 24:00 Uhr des Vortages der Prüfung oder in begründeten Ausnahmefällen beim Studierendenservice innerhalb der Geschäftszeiten erfolgen. Erfolgt die Abmeldung gegenüber dem/der Prüfenden hat diese/r Sorge zu tragen, dass die Abmeldung im Campus Management System verbucht wird.

(3) Die Abmeldung von Prüfungsleistungen anderer Art sowie von Studienleistungen ist im Modulhandbuch geregelt.

(4) Eine Erfolgskontrolle gilt als mit „nicht ausreichend“ (5,0) bewertet, wenn die Studierenden einen Prüfungstermin ohne triftigen Grund versäumen oder wenn sie nach Beginn der Erfolgskontrolle ohne triftigen Grund von dieser zurücktreten. Dasselbe gilt, wenn die Masterarbeit nicht innerhalb der vorgesehenen Bearbeitungszeit erbracht wird, es sei denn, der/die Studierende hat die Fristüberschreitung nicht zu vertreten.

§ 11 Täuschung, Ordnungsverstoß

(1) Versuchen Studierende das Ergebnis ihrer Erfolgskontrolle durch Täuschung oder Benutzung nicht zugelassener Hilfsmittel zu beeinflussen, gilt die betreffende Erfolgskontrolle als mit „nicht ausreichend“ (5,0) bewertet.

(3) Näheres regelt die Allgemeine Satzung des KIT zur Redlichkeit bei Prüfungen und Praktika in der jeweils gültigen Fassung.
§ 12 Mutterschutz, Elternzeit, Wahrnehmung von Familienpflichten

(3) Der Prüfungsausschuss entscheidet auf Antrag über die flexible Handhabung von Prüfungsfristen entsprechend den Bestimmungen des Landeshochschulgesetzes, wenn Studierende Familienpflichten wahrzunehmen haben. Absatz 2 Satz 4 bis 6 gelten entsprechend.

§ 13 Studierende mit Behinderung oder chronischer Erkrankung

(2) Weisen Studierende eine Behinderung oder chronische Erkrankung nach und folgt daraus, dass sie nicht in der Lage sind, Erfolgskontrollen ganz oder teilweise in der vorgeschriebenen Zeit oder Form abzulegen, kann der Prüfungsausschuss gestatten, die Erfolgskontrollen in einem anderen Zeitraum oder einer anderen Form zu erbringen. Insbesondere ist behinderten Studierenden zu gestatten, notwendige Hilfsmittel zu benutzen.

(3) Weisen Studierende eine Behinderung oder chronische Erkrankung nach und folgt daraus, dass sie nicht in der Lage sind, die Lehrveranstaltungen regelmäßig zu besuchen oder die gemäß § 19 erforderlichen Studien- und Prüfungsleistungen zu erbringen, kann der Prüfungsausschuss auf Antrag gestatten, dass einzelne Studien- und Prüfungsleistungen nach Ablauf der in dieser Studien- und Prüfungsordnung vorgesehenen Fristen absolviert werden können.

§ 14 Modul Masterarbeit

(1 a) Dem Modul Masterarbeit sind 30 LP zugeordnet. Es besteht aus der Masterarbeit und einer Präsentation. Die Präsentation soll spätestens acht Wochen nach Abgabe der Masterarbeit erfolgen.

(3) Thema, Aufgabenstellung und Umfang der Masterarbeit sind von dem Betreuer bzw. der Betreuerin so zu begrenzen, dass sie mit dem in Absatz 4 festgelegten Arbeitsaufwand bearbeitet werden kann.

(5) Bei der Abgabe der Masterarbeit haben die Studierenden schriftlich zu versichern, dass sie die Arbeit selbstständig verfasst und keine anderen als die angegebenen Quellen und Hilfsmittel benutzt haben, die wörtlich oder inhaltlich übernommenen Stellen als solche kenntlich gemacht und die Satzung des KIT zur Sicherung guter wissenschaftlicher Praxis in der jeweils gültigen Fassung beachtet haben. Wenn diese Erklärung nicht enthalten ist, wird die Arbeit nicht angenommen. Die Erklärung kann wie folgt lauten: „Ich versichere wahrheitsgemäß, die Arbeit selbstständig verfasst, alle benutzten Hilfsmittel vollständig und genau angegeben und alles kenntlich gemacht zu haben, was aus Arbeiten anderer unverändert oder mit Abänderungen entnommen wurde sowie die Satzung des KIT zur Sicherung guter wissenschaftlicher Praxis in der jeweils gültigen Fassung beachtet zu haben.“ Bei Abgabe einer unwahren Versicherung wird die Masterarbeit mit „nicht ausreichend“ (5,0) bewertet.

§ 14 a Berufspraktikum

(2) Die Studierenden setzen sich in eigener Verantwortung mit geeigneten privaten oder öffentlichen Einrichtungen in Verbindung, an denen das Praktikum abgeleistet werden kann. Das Nähere regelt das Modulhandbuch.

§ 15 Zusatzleistungen

(2) Die Studierenden haben bereits bei der Anmeldung zu einer Prüfung in einem Modul diese als Zusatzleistung zu deklarieren.

§ 15 a Überfachliche Qualifikationen

§ 16 Prüfungsausschuss

(3) Der Prüfungsausschuss achtet auf die Einhaltung der Bestimmungen dieser Studien- und Prüfungsordnung und fällt die Entscheidungen in Prüfungsangelegenheiten. Er entscheidet über
244

die Anerkennung von Studienzeiten sowie Studien- und Prüfungsleistungen und trifft die Fest-
stellung gemäß § 18 Absatz 1 Satz 1. Er berichtet der KIT-Fakultät regelmäßig über die Entwick-
lung der Prüfungs- und Studienzeiten, einschließlich der Bearbeitungszeiten für die Masterarbei-
ten und die Verteilung der Modul- und Gesamtnoten. Er ist zuständig für Anregungen zur Reform
der Studien- und Prüfungsordnung und zu Modulbeschreibungen. Der Prüfungsausschuss ents-
scheidet mit der Mehrheit seiner Stimmen. Bei Stimmengleichheit entscheidet der Vorsitzende
des Prüfungsausschusses.

(4) Der Prüfungsausschuss kann die Erledigung seiner Aufgaben für alle Regelfälle auf die/den
Vorsitzende/n des Prüfungsausschusses übertragen. In dringenden Angelegenheiten, deren
Erledigung nicht bis zu der nächsten Sitzung des Prüfungsausschusses warten kann, entschei-
det die/der Vorsitzende des Prüfungsausschusses.

(5) Die Mitglieder des Prüfungsausschusses haben das Recht, der Abnahme von Prüfungen beizuwohnen. Die Mitglieder des Prüfungsausschusses, die Prüfenden und die Beisitzenden
unterliegen der Verschwiegenheit. Sofern sie nicht im öffentlichen Dienst stehen, sind sie durch
die/den Vorsitzende/n zur Verschwiegenheit zu verpflichten.

(6) In Angelegenheiten des Prüfungsausschusses, die eine an einer anderen KIT-Fakultät zu
absolvierende Prüfungsleistung betreffen, ist auf Antrag eines Mitgliedes des Prüfungsaus-
schusses eine fachlich zuständige und von der betroffenen KIT-Fakultät zu nennende prüfungs-
berechtigte Person hinzuzuziehen.

(7) Belastende Entscheidungen des Prüfungsausschusses sind schriftlich mitzuteilen. Sie sind
to begründen und mit einer Rechtsbehelfsbelehrung zu versehen. Vor einer Entscheidung ist
Gelegenheit zur Äußerung zu geben. Widersprüche gegen Entscheidungen des Prüfungsaus-
schusses sind innerhalb eines Monats nach Zugang der Entscheidung schriftlich oder zur Nie-
derschrift bei diesem einzulegen. Über Widersprüche entscheidet das für Lehre zuständige Mit-
glied des Präsidiums.

§ 17 Prüfende und Beisitzende

(1) Der Prüfungsausschuss bestellt die Prüfenden. Er kann die Bestellung der/dem Vorsitzenden
übertragen.

(2) Prüfende sind Hochschullehrer/innen sowie leitende Wissenschaftler/innen gemäß § 14 Abs.
3 Ziff. 1 KITG, habilitierte Mitglieder und akademische Mitarbeiter/innen gemäß § 52 LHG, wel-
che der KIT-Fakultät angehören und denen die Prüfungsbefugnis übertragen wurde; desgleichen
kann wissenschaftlichen Mitarbeitern gemäß § 14 Abs. 3 Ziff. 2 KITG die Prüfungsbefugnis über-
tragen werden. Bestellt werden darf nur, wer mindestens die dem jeweiligen Prüfungsgegen-
stand entsprechende fachwissenschaftliche Qualifikation erworben hat.

(3) Soweit Lehrveranstaltungen von anderen als den unter Absatz 2 genannten Personen durch-
geführt werden, sollen diese zu Prüfenden bestellt werden, sofern die KIT-Fakultät eine Prü-
fungsbefugnis erteilt hat und sie die gemäß Absatz 2 Satz 2 vorausgesetzte Qualifikation nach-
weisen können.

(4) Die Beisitzenden werden durch die Prüfenden benannt. Zu Beisitzenden darf nur bestellt
werden, wer einen akademischen Abschluss in einem ingenieurwissenschaftlichen oder mathem-
atisch-naturwissenschaftlichen Masterstudiengang oder einen gleichwertigen akademischen
Abschluss erworben hat.

§ 18 Anerkennung von Studien- und Prüfungsleistungen, Studienzeiten

(1) Studien- und Prüfungsleistungen sowie Studienzeiten, die in Studiengängen an staatlichen
oder staatlich anerkannten Hochschulen und Berufskademien der Bundesrepublik Deutschland
oder an ausländischen staatlichen oder staatlich anerkannten Hochschulen erbracht wurden,
werden auf Antrag der Studierenden anerkannt, sofern hinsichtlich der erworbenen Kompeten-
zein wesentlicher Unterschied zu den Leistungen oder Abschlüssen besteht, die ersetzt
werden sollen. Dabei ist kein schematischer Vergleich, sondern eine Gesamtbetrachtung vorzu-
nehmen. Bezüglich des Umfangs einer zur Anerkennung vorgelegten Studienleistung (Anrechnung) werden die Grundsätze des ECTS herangezogen.

(2) Die Studierenden haben die für die Anerkennung erforderlichen Unterlagen vorzulegen. Studierende, die neu in den Masterstudiengang Chemieingenieurwesen und Verfahrenstechnik immatrikuliert wurden, haben den Antrag mit den für die Anerkennung erforderlichen Unterlagen innerhalb eines Semesters nach Immatrikulation zu stellen. Bei Unterlagen, die nicht in deutscher oder englischer Sprache vorliegen, kann eine amtlich beglaubigte Übersetzung verlangt werden. Die Beweislast dafür, dass der Antrag die Voraussetzungen für die Anerkennung nicht erfüllt, liegt beim Prüfungsausschuss.

(3) Werden Leistungen angerechnet, die nicht am KIT erbracht wurden, werden sie im Zeugnis als „anerkannt“ ausgewiesen. Liegen Noten vor, werden die Noten, soweit die Notensysteme vergleichbar sind, übernommen und in die Berechnung der Modulnoten und der Gesamtnote einbezogen. Sind die Notensysteme nicht vergleichbar, können die Noten umgerechnet werden. Liegen keine Noten vor, wird der Vermerk „bestanden“ aufgenommen.

(4) Bei der Anerkennung von Studien- und Prüfungsleistungen, die außerhalb der Bundesrepublik Deutschland erbracht wurden, sind die von der Kultusministerkonferenz und der Hochschulrektorenkonferenz gebilligten Äquivalenzvereinbarungen sowie Absprachen im Rahmen der Hochschulpartnerschaften zu beachten.

(5) Außerhalb des Hochschulsystems erworbene Kenntnisse und Fähigkeiten werden angerechnet, wenn sie nach Inhalt und Niveau den Studien- und Prüfungsleistungen gleichwertig sind, die ersetzt werden sollen und die Institution, in der die Kenntnisse und Fähigkeiten erworben wurden, ein genormtes Qualitätssicherungssystem hat. Die Anrechnung kann in Teilen versagt werden, wenn mehr als 50 Prozent des Hochschulstudiums ersetzt werden sollen.

II. Masterprüfung

§ 19 Umfang und Art der Masterprüfung

(1) Die Masterprüfung besteht aus den Modulprüfungen nach Absatz 2 und 3 sowie der Modul Masterarbeit (§ 14) und dem Berufspraktikum (§ 14 a).

(2) Es sind Modulprüfungen in folgenden Pflichtfächern abzulegen:

1. Erweiterte Grundlagen: Modul(e) im Umfang von 32 LP,
2. Technisches Ergänzungsfach: Modul(e) im Umfang von 10 LP
3. Überfachliche Qualifikationen im Umfang von mindestens 2 LP gemäß § 15 a.

Die Festlegung der zur Auswahl stehenden Module und deren Fachzuordnung werden im Modulhandbuch getroffen. § 4 Absatz 2 Satz 2 ist zu beachten.

§ 19 a Leistungsnachweise für die Masterprüfung

Voraussetzung für die Anmeldung zur letzten Modulprüfung der Masterprüfung ist die Bescheinigung über das erfolgreich abgeleistete Berufspraktikum nach § 14 a. In Ausnahmefällen, die die Studierenden nicht zu vertreten haben, kann der Prüfungsausschuss die nachträgliche Vorlage dieses Leistungsnachweises genehmigen.

§ 20 Bestehen der Masterprüfung, Bildung der Gesamtnote

(1) Die Masterprüfung ist bestanden, wenn alle in § 19 genannten Modulprüfungen mindestens mit „ausreichend“ bewertet wurden.

(2) Die Gesamtnote der Masterprüfung errechnet sich als ein mit Leistungspunkten gewichteter Notendurchschnitt der Fachnoten und dem Modul Masterarbeit.

(3) Haben Studierende die Masterarbeit mit der Note 1,0 und die Masterprüfung mit einem Durchschnitt von 1,2 oder besser abgeschlossen, so wird das Prädikat „mit Auszeichnung“ (with distinction) verliehen.

§ 21 Masterzeugnis, Masterurkunde, Diploma Supplement und Transcript of Records

(3) Mit dem Zeugnis erhalten die Studierenden ein Diploma Supplement in deutscher und englischer Sprache, das den Vorgaben des jeweils gültigen ECTS Users' Guide entspricht, sowie ein Transcript of Records in deutscher und englischer Sprache.

III. Schlussbestimmungen

§ 22 Bescheinigung von Prüfungsleistungen
Haben Studierende die Masterprüfung endgültig nicht bestanden, wird ihnen auf Antrag und gegen Vorlage der Exmatrikulationsbescheinigung eine schriftliche Bescheinigung ausgestellt, die die erbrachten Studien- und Prüfungsleistungen und deren Noten enthält und erkennen lässt, dass die Prüfung insgesamt nicht bestanden ist. Dasselbe gilt, wenn der Prüfungsanspruch erschöpft ist.

§ 23 Aberkennung des Mastergrades
(1) Haben Studierende bei einer Prüfungsleistung getäuscht und wird diese Tatsache nach der Aushändigung des Zeugnisses bekannt, so können die Noten der Modulprüfungen, bei denen getäuscht wurde, berichtigt werden. Gegebenenfalls kann die Modulprüfung für „nicht ausreichend“ (5,0) und die Masterprüfung für „nicht bestanden“ erklärt werden.

(2) Waren die Voraussetzungen für die Zulassung zu einer Prüfung nicht erfüllt, ohne dass die/die Studierende darüber täuschen wollte, und wird diese Tatsache erst nach Aushändigung des Zeugnisses bekannt, wird dieser Mangel durch das Bestehen der Prüfung geheilt. Hat die/die Studierende die Zulassung vorsätzlich zu Unrecht erzielt, so kann die Modulprüfung für „nicht ausreichend“ (5,0) und die Masterprüfung für „nicht bestanden“ erklärt werden.

(3) Vor einer Entscheidung des Prüfungsausschusses ist Gelegenheit zur Äußerung zu geben.

(4) Das unrichtige Zeugnis ist zu entziehen und gegebenenfalls ein neues zu erteilen. Mit dem unrichtigen Zeugnis ist auch die Masterurkunde einzuziehen, wenn die Masterprüfung aufgrund einer Täuschung für „nicht bestanden“ erklärt wurde.

(6) Die Aberkennung des akademischen Grades richtet sich nach § 36 Abs. 7 LHG.

§ 24 Einsicht in die Prüfungsakten
(1) Nach Abschluss der Masterprüfung wird den Studierenden auf Antrag innerhalb eines Jahres Einsicht in das Prüfungsexemplar ihrer Masterarbeit, die darauf bezogenen Gutachten und in die Prüfungsprotokolle gewährt.

(2) Für die Einsichtnahme in die schriftlichen Modulprüfungen, schriftlichen Modulteilprüfungen bzw. Prüfungsprotokolle gilt eine Frist von einem Monat nach Bekanntgabe des Prüfungsergebnisses.

(3) Der/die Prüfende bestimmt Ort und Zeit der Einsichtnahme.

(4) Prüfungsunterlagen sind mindestens fünf Jahre aufzubewahren.

§ 25 Inkrafttreten, Übergangsvorschriften
(1) Diese Studien- und Prüfungsordnung tritt am 01. Oktober 2016 in Kraft.

(3) Studierende, die auf Grundlage der Studien- und Prüfungsordnung für den Masterstudien-
gang Chemieingenieurwesen und Verfahrenstechnik vom 27. September 2012 (Amtliche Bekan-
tnmachung des KIT Nr. 56 vom 27. September 2012), geändert durch die Satzung zur Um-
setzung des Übereinkommens über die Anerkennung von Qualifikationen im Hochschulbereich
der Europäischen Region vom 11. April 1997 (Lissabon-Konvention) gemäß §§ 32 Abs. 2, 4 und
36a Landeshochschulgesetz (LHG) in den Studien- und Prüfungsordnungen am Karlsruher Insti-
März 2014) ihr Studium am KIT aufgenommen haben, können Prüfungen auf Grundlage dieser
Studien- und Prüfungsordnung letztmalig bis zum Ende des Prüfungszeitraums des Winterse-
mesters 2020/21 ablegen.

(4) Studierende, die auf Grundlage der Studien- und Prüfungsordnung für den Masterstudien-
gang Chemieingenieurwesen und Verfahrenstechnik vom 27. September 2012 (Amtliche Bekan-
ttmachung des KIT Nr. 56 vom 27. September 2012), geändert durch die Satzung zur Um-
setzung des Übereinkommens über die Anerkennung von Qualifikationen im Hochschulbereich
der Europäischen Region vom 11. April 1997 (Lissabon-Konvention) gemäß §§ 32 Abs. 2, 4 und
36a Landeshochschulgesetz (LHG) in den Studien- und Prüfungsordnungen am Karlsruher Insti-
März 2014), ihr Studium am KIT aufgenommen haben, können auf Antrag ihr Studium der vor-
liegenden Studien- und Prüfungsordnung forsetzen. Der Antrag ist spätestens bis zum 31. Ja-
nuar 2017 zu stellen.

Karlsruhe, den 03. Mai 2016

Professor Dr.-Ing. Holger Hanselka
(Präsident)
Inhalt

Satzung zur Änderung der Studien- und Prüfungsordnung des Karlsruher Instituts für Technologie (KIT) für den Masterstudiengang Chemieingenieurwesen und Verfahrenstechnik 15
Satzung zur Änderung der Studien- und Prüfungsordnung des Karlsruher Instituts für Technologie (KIT) für den Masterstudiengang Chemieingenieurwesen und Verfahrenstechnik

vom 24.02.2020

Der Präsident hat seine Zustimmung gemäß § 20 Absatz 2 Satz 1 KITG i.V.m. § 32 Absatz 3 Satz 1 LHG am 24.02.2020 erteilt.

Artikel 1 – Änderung der Studien- und Prüfungsordnung

1. § 12 Absatz 1 wird wie folgt geändert:
   a) Satz 1 wird wie folgt gefasst:
      „Es gelten die Vorschriften des Gesetzes zum Schutz von Müttern bei der Arbeit, in der Ausbildung und im Studium (Mutterschutzgesetz – MuSchG) in seiner jeweils geltenden Fassung.“
      b) Satz 2 wird aufgehoben.
      c) Die bisherigen Sätze 3 und 4 werden die Sätze 2 und 3.

2. In § 16 Absatz 7 Satz 4 werden nach dem Wort „Entscheidung“ die Wörter „schriftlich oder zur Niederschrift“ gestrichen.

4. § 25 wird wie folgt geändert:
   a) Es wird folgender Absatz 5 eingefügt:
b) Es wird folgender Absatz 6 eingefügt:

Artikel 2 – Inkrafttreten

Diese Änderungssatzung tritt am Tage nach ihrer Veröffentlichung in den Amtlichen Bekanntmachungen des KIT in Kraft.

Karlsruhe, den 24.02.2020

gez. Professor Dr.-Ing. Holger Hanselka
(Präsident)
